THIS IS SCHEDULE PART 15 REFERRED TO IN THE FOREGOING AGREEMENT BETWEEN TIE AND THE INFRACO

USB00000079_0001

SCHEDULE PART 15

PROGRAMME

The Programme consists of the following documents:

- Infraco Construction Programme
- The Programming Assumptions
- Relaxations to the CoCP constraints assumed by BBS in their construction programme as annotated and agreed with **tie**
- On Street Construction Works Methodology
- SDS Design Delivery Programme V26
- SDS Consents Programme (derived from the SDS Design Delivery Programme V26)

The On Street Construction Works Methodology provides details of how Infraco will deliver its works in the city centre sections of the route, including proposed traffic diversions, and has been agreed between the Parties and CEC. The Infraco Construction Programme is based on the On Street Construction Works Methodology and it is one of the programming assumptions.

The Infraco Construction Programme dated 29/04/08 is based on V26 of the SDS design programme. Since this programme was produced, SDS has provided an update to the design programme.

It was agreed that any variation between the SDS Design Delivery Programme and the Infraco Construction Programme would be dealt with as a Notified Departure to the extent that such variation adversely affects the achievement of the Infraco Construction Programme.

Explanatory Note:-.

Rather than to fully align the BBS Construction Programme with the SDS Design Delivery Programme prior to Contract award, both parties agreed that the contract would be based on V26 of the SDS design programme, along with a mitigation plan to deal with movement to the SDS design programme which had potential to impact on the BBS construction programme.

BILFINGER BERGER U. K. Limited

SIEMENS

Programming Assumptions (12 May 2008)

1 GENERAL

1.1Our programme for the works recognises the allowed working hours stated in the Code of Construction Practice of 0700 to 1900 Monday to Friday and 0800 to 1300 on a Saturday. Schedule 15 separately identifies areas where Infraco may make applications for relaxations to the CoCP. General assumptions are as follows

1.1.1 Removal of hedgerows, trees, vegetation and other habitats used by breeding birds will be executed before March 2008, as part of an advanced works contract.

1.1.2 The scope and complexity of the works is as shown on the drawings at 25 November 2007 and detailed in the bill of quantities.

2 DESIGN PROGRAMME

2.1 Version 26 of the SDS design programme has been used to establish milestone dates for the Issue for Construction drawings. We have assumed that there will be no amendments to the SDS design programme. The dates from the following activities have been extracted,

2.2 Substations – There are no dates for the Issue for Construction drawings and it is assumed that the civil engineering and building designs will be Issued for Construction sufficiently in advance of programme so as to ensure that the programme is maintained.

2.3 There are no dates given for the design of the structure that has replaced the A8 retaining wall. We have assumed that the design of this structure will be Issued for Construction as part of the depot earthworks redesign and that this redesign will be completed by the end of April 2008.

2.4 The programme assumes that Issue for Construction information for the Gogar Depot building will be released as required to construct the Depot in accordance with the programme. This will require Issue for Construction in advance of the date shown on version 26 of the SDS design programme.

2.5 Version 26 of the SDS design programme has been used to identify Issue for Construction programme milestone dates that are 4 weeks in advance of the start of construction works on site. It has been assumed that where a longer lead in time is required for items on extended delivery (i.e. bridge beams) that this can be accommodated by advanced information release by SDS.

2.6 It is assumed that where Issue for Construction programme milestones shown against version 26 of the SDS design programme as “letters of completion”, the design is complete. Where no milestone is identified it is assumed that the design is complete.

2.7 The trackwork activities in Section 2A commence on 21 July 2008 as requested by tie to accommodate the revised forecast receipt of Issued for Construction drawings from SDS.

3 MUDFA & UTILITIES

3.1 The programme is based on MUDFA having completed all works and all utilities being diverted that would conflict with INFRACO operations by the following dates;

1A	31 October 2008
1B	01 August 2008
1C	31 October 2008
1D	19 December 2008
2A	16 May 2008
5A	No constraint
5B	11 April 2008
5C	16 May 2008
6	SGN Diversion, 18 April 2008
	Watermain Diversion 30 May 2008
7A	16 May 2008

3.2 No enabling works shall be required to be undertaken by INFRACO before MUDFA (or other Utilities) can complete their works. The programme is based on the Utilities in the Victoria Dock Access Bridge and Tower Place Bridge area being temporarily diverted away from INFRACO works by MUDFA in advance of the INFRACO works.

4 NETWORK RAIL

4.1 The programme assumes that the Bridge beams will be placed at Carrick Knowe Bridge and Edinburgh Park Bridge over the Christmas and New Year period 2008.

4.2 In the other possessions already booked for 2008 we will undertake the following works:

- Site Clearance
- Temporary earthworks support at Carrick Knowe.
- Temporary earthworks support to corner of base at Piers 3 & 4 Edinburgh Park.
- Bunding to protect beam support at Scaffold at Edinburgh Park.
- Temporary Rail protection.

4.3 Further possessions will be required in 2009 to remove crash decks, take down safety fences, erect OLE poles and string catenary wires and the programme assumes that this will be available as required.

4.4 In addition works to be undertaken at the following bridges South Gyle Access, Balgreen Road, Water of Leith, Russell Road and Roseburn Street Viaduct may require to be undertaken

in existing or new possessions depending on the requirements of Network Rail. The programme assumes that these works can be undertaken at such times as enable the programme to be maintained.

5 TRACKWORK

5.1 There is no allowance in the programme for excavation below earthworks outline level for soft spots or more extensive areas of ground improvement.

6 DESIGN/INFORMATION

6.1 There are a number of sections of Phase 1a of the Project where we do not have information that enables us to firm up our programme. The most significant are as follows;

6.1.1 Sub-section 1A, Newhaven to Foot of the Walk

The road and tramway layout is in the process of being changed, we understand to Forth Ports requirements. This also affects the 3 structures in the section, Lindsay Road RW, Tower Place Bridge and Victoria Dock Bridge. We have assumed that Victoria Dock Access Bridge will only require resurfacing. The programme, for the other activities, is based on the information made available by tie for pricing prior to 25 November 2007.

6.1.2 Subsection 1C, McDonald Road to Princes Street West

The junction layouts are being radically changed at London Road and Picardy Place, due to CEC requirements, and a significant vertical alignment change is being made to the North St Andrews St/York Pl junction for tramway alignment reasons. Picardy and York may also involve us in Utility Works. Only provisional activities (called dummy) are included in the programme for these locations. The programme assumes that these activities are no longer in duration than the "dummy" activities shown on the programme.

6.1.3 Sub-section 5A, Roseburn Junction to Balgreen

6.1.3.1 Balgreen Road Bridge and the adjacent Baird Drive and Balgreen Road Walls are being changed to Network Rail requirements. The requirements for one element of the bridge have not been agreed between CEC and Network Rail.

6.1.3.2 Dummy item included in the programme for Balgreen Road. - the programme assumes that these activities are no longer in duration than the "dummy" activities shown on the programme.

6.1.4 Sub-section 5B, Balgreen to Edinburgh Park

Carrick Knowe Railway Bridge is being re-designed (widened) to incorporate a cycleway, CEC requirement. (No time allowance made for widening)

6.1.5 Sub-section 5C, Edinburgh Park to Gogarburn

6.1.5.1 A dummy programme item of 20 days has been allowed for supporting and working around the large bank of BT ducts which conflict with the A8 underpass construction. The Base Date Design Information for the A8 underpass does not cater for the large BT duct (above) and the large diameter sewer (below) which prevent the secant (or contiguous) piled wall design from working where these two services intersect the line of the structure. Whilst it is recognised that the resolution of this problem will have an impact on the programme, the programme allows only

a duration of 20 days, as noted above, for the impact of the works required to resolve the BT duct problem.

6.1.5.2 The Depot Access Bridge is being re-designed (dummy item added). The programme assumes that this activity is no longer in duration than the "dummy" activity shown on the programme.

6.1.6 Sub-section 7A, Gogarburn to Edinburgh Airport

Due to the cancellation of EARL, the vertical alignment of the Tramway, 3No Culverts and 2No Walls at the Airport Tramstop are being changed. (No allowance for these changes has been made and the programme assumes that there will be no impact).

7 OLE DESIGN

7.1 The programme milestone for OLE design to commence (i.e. SDS issue Issue for Construction track alignment drawings) includes the receipt by the Infraco of the following information sufficient to allow construction in accordance with the programme:

7.1.1 Complete and approved track alignment in data format.

7.1.2 Other structures and Utilities data.

7.1.3 tie decision re OCS system in City Centre.

7.1.4 Complete and approved vehicle data.

7.2 That approval of the OLE design is not required prior to Issue for Construction of the OLE foundation design (i.e. no approval periods have been allowed in the logic SDS issue track alignment drawings – Siemens design OLE – SDS design OLE foundations – OLE foundation construction).

7.3 That approval of the OLE design is not required prior to Issue for Construction of the OLE building fixing design (i.e. no approval periods have been allowed in the logic SDS issue track alignment drawings – Siemens design OLE – SDS design building fixings –Siemens OLE installation).

8 DESIGN STAGE AND TIE CONSENTS

8.1 The programme assumes that tie will timeously obtain the relevant TTRO's and TRO's to allow the necessary traffic management for the construction and operation of the tram respectively.

8.2 The programme also assumes that all third party consents will be granted to allow works to proceed in accordance with the logic and timescales shown.

9 MAIN PROGRAMMING ASSUMPTIONS

9.1 Further assumptions upon which the programme is based are as follows:

9.1.1 Relaxations on City Centre Constraints are required which could be subject to full CEC approval. The programme assumes that such relaxations shall be permitted so as to ensure that the programme is maintained as identified in Schedule 15.

9.1.2 tie shall accept that commissioning shall commence (on the date shown on the programme) prior to the completion of the Picardy Place Roadworks.

9.1.3 That there shall be no slippage in the MUDFA programme.

9.1.3 That there shall be no slippage on the SDS programme.

9.1.4 That the SDS design will allow road construction by planing the existing surfacing to underside of new surface course and laying the new surface course.

9.1.5 The only programming constraint imposed by the Scotrail Depot at Haymarket is that Roseburn Street Viaduct cannot commence until the oil tanks have been relocated. For the avoidance of doubt, the relocation of the oil tanks only, will be deemed to be delayed if such relocation is not completed by the date on the Programme regardless of the date noted in Schedule Part 26, tie Obligations, for the same activity.

9.1.6 Construction of the trackwork to the Guided Bus Way will commence in November 2008.

10 COMPLETION

10.1 The current version of the programme completes Airport to Haymarket in May 2011, Haymarket to Newhaven in July 2011.

EDINBURGH TRAM PROJECT
Proposed Schedule of Works to Seek Dispensation from CoCP

Category	Item	Status	Comments
On – Street Track Works	Establish Traffic Management - only as justified - exception rather than the rule	Agreed with comments	Only where justified and agreed. Should be the exception rather than the rule
On – Street Track Works	Delivery of Rails	Agreed	
On – Street Track Works	Cross carriageway ducts.	Agreed with comments	This is to tie in central track ducts to existing drainage/ducts agreed for difficult access & exceptions
On – Street Track Works	Cross carriageway drains	Agreed with comments	This is to tie in central track ducts to existing drainage/ducts agreed for difficult access & exceptions
On – Street Track Works	Tie ins for road surfacing (Planing and Surfacing)	Agreed	
On – Street Track Works	Erection of street lights	Agreed with comments	Agreed for modifications to existing layouts. New build to be done under CoCP
On – Street Track Works	Erection of traffic signals.	Agreed with comments	Agreed for modifications to existing layouts. New build to be done under CoCP
On – Street Track Works	Permanent road markings	Agreed with comments	At major road junctions or area's of difficult access
On – Street Track Works	Rail tie ins at road junctions	Agreed	
On – Street Track Works	Building fixings for OLE	Agreed with comments	For erection of equipment and/or OHL only and not for the actual drilling/fitting of fixings
On – Street Track Works	OLE Columns	Agreed with comments	Only for area's of difficult access
On – Street Track Works	Stringing Catenary Cables.	Agreed with comments	Only for area's of difficult access
On – Street Track Works	Pulling comms and power cables.	Agreed with comments	Only for area's of difficult access
On – Street Track Works	Applying mastic seal to rail edges.	Agreed with comments	Should be the exception rather than the rule
On – Street Track Works	Removing Traffic Management.	Agreed with comments	Should be the exception rather than the rule
On – Street Track Works	Delivery of Tram Stop Shelters and other large equipment.	Agreed	
On – Street Track Works	Work activities in Constitution Street where access is very restricted	Agreed with comments	Only to provide / facilitate for special 3rd party access or similar
Depot	Works necessitated due to possible restrictions on craneage etc enforced by British Airports Authority.- agreed	Agreed	
Works Associated with Network Rail	All works that by the nature of their proximity to the Network Rail Tracks require Possessions to undertake.	Agreed	
A8 Subway	Establish traffic management- agreed	Agreed with comments	In agreement with BAA as there may be restrictions on lighting at night as emergency runway will be in use when main runway is resurfaced.
A8 Subway	Mobilise and demobilise piling rigs- agreed	Agreed with comments	In agreement with BAA as there may be restrictions on lighting at night as emergency runway will be in use when main runway is resurfaced.
A8 Subway	Installation and removal of temporary sheet piles which provide temporary support to the carriageway.- agreed	Agreed with comments	In agreement with BAA as there may be restrictions on lighting at night as emergency runway will be in use when main runway is resurfaced.
A8 Subway	Tie ins for road surfacing (Planning and Surfacing)- agreed	Agreed with comments	In agreement with BAA as there may be restrictions on lighting at night as emergency runway will be in use when main runway is resurfaced.
A8 Subway	Permanent road markings- agreed	Agreed with comments	In agreement with BAA as there may be restrictions on lighting at night as emergency runway will be in use when main runway is resurfaced.
A8 Subway	Removing Traffic Management.- agreed	Agreed with comments	In agreement with BAA as there may be restrictions on lighting at night as emergency runway will be in use when main runway is resurfaced.
General	Dewatering Excavations.	Agreed with comments	By exception
General	Maintenance of Traffic Management.	Agreed with comments	As and when required in response to defects
General	Site Safety. Please provide more details	Agreed with comments	In response to an incident or a planned monitoring activity
General	Completion of concrete pours (power floating etc of bridge decks).	Agreed	
General	Erection of bridge beams, crash decks etc over roads (South Gyle Access, Roseburn Street, Balgreen Road etc.)	Agreed	
General	Works that need to be completed outside normal working hours as a result of Third Party Agreements	Agreed	
General	Movement of Plant and Machinery. - by exception	Agreed with comments	By exception
General	Delivery of abnormal loads.- agreed	Agreed	

EDINBURGH TRAM PROJECT
Proposed Schedule of Works to Seek Dispensation from CoCP

Category	Item	Status	Comments
General	Connection of power and telecomm outside peak times or due to the availability of outages.	Agreed	
General	Testing and commissioning of sub-stations. - by exception	Agreed with comments	By exception
General	Testing and commissioning of Trams to avoid traffic problems in case of a breakdown or systems failure.	Agreed with comments	By exception or for specific testing requirements / situations. Not for general training
General	Signal and system integration testing operations. - by exception depending on test	Agreed with comments	By exception depending on test requiremetns
General	Works adjacent to the guided bus route which would cause disruption during peak times.	Agreed	
General	Works which are programmed but cannot be carried out without causing disruption to City festivals and events. Examples?	Agreed with comments	Specific or unknown events only. Not known embargos or identified events at 28Feb08
General	Road works and footway works that would affect access points to business premises, distribution centres etc.	Agreed with comments	Not as the norm. by exception only

Introduction

This document has been prepared to provide a summary view of the documentation that has been used and decisions that have been made to agree the construction methodology primarily for Edinburgh Tram Infraco Construction Works that are to take place in the City Centre (Haymarket to Newhaven) but also for two recognised areas outwith the city centre being the interface between the A8 Underpass construction at the Gogar Roundabout and the construction activities to the existing guided busway.

This document refers to may separate sketches and drawings that have been reviewed and discussed in some detail by not only **tie** and the Infraco Constructor (**BBS**) but also with major stakeholders such as CEC, TEL and Lothian and Borders Police.
All referenced drawings and sketches are available under separate cover.

General

1. Queen Street – George Street – Princes Street have to be recognised as the "cornerstone" of any traffic management proposals and should be used as the foundation to build traffic management solutions from.

2. CEC advised that as there are only 3 recognised North – South routes through the city being :
    a. Princes St. – Lothian Rd.
    b. Through Mound junction
    c. Picardy place – Leith St. North Bridge

    and that only one of these thoroughfares can be closed at any given time and this constraint must be recognised during INFRACO programme development.

3. **tie** advised that any temporary traffic management deemed necessary will be input to the traffic modelling software by JRC.

4. Identification required by INFRACO of other works off the tram route that may be required to facilitate Traffic management i.e. removal of existing traffic calming measures, tree lopping, parking restrictions, signage etc.

5. Colour coded route map for on-street section referred to during discussions has been scanned and made available to all. (Attachment 1)

6. The constraints matrix (issued previously) is also colour coded to match map. The route map if reproduced for 3rd parties are not to be issued greater then A3 size. (Attached)- This has been superseded by the 'relaxation' of city centre constraints as detailed in the following pages. (Attachment 2)

7. BBS to consider in all proposals the requirement to service both business and private premises and required access to bus stops. BBS initial response is that servicing or business premises may have to be done outwith construction hours.

8. All proposals discussed are utilising CoCP hours only.

9. There are three areas have been recognised as full closure, due to considerable reduction on programme duration. (Shandwick place, Princess street and Constitution street)

Code of Construction Practice

The agreed Code of Construction Practice (CoCP) limits the working hours available as follows

Monday to Friday 7am-7pm
Saturday 8am-1pm

Any requirement to work outside of the COCP will have to be identified and an application made to CEC well in advance of the requirement.

Site Specific CoCP

Site Specific Code of Construction Practices exist for the area's listed below which have to be recognised and adhered to during Infraco Construction works.

1. Porth Ports
2. Ocean Terminal
3. Royal Yocht Brittania
4. BAA
5. SRU
6. Edinburgh Park
7. Network Rail
8. Others

{ XE "Code of Construction Practice" **}**

Embargo's

August Festival

August festival restriction period will run annually from the 1st Sunday in August to the 1st Sunday in September inclusive.

Christmas

From the Thursday preceding the first Sunday in December until the first working day of the New Year annually

Limits

Haymarket to Picardy Place

ON –STREET CONSTRUCTION METHODOLOGIES

Haymarket Junction

Limits

Frontage of Caley Ale House with Haymarket Station to West side of Palmerston Place (includes left turn into Plamerston Place)

Agreement

Phase 1 Drawing SK-TM-001

1. BBS confirmed that subject to being able to maintain acceptable pedestrian crossings that the 2 lane flow of traffic exiting Dalry Road into West Maitland Street would be maintained by"skewing" across the junction into West Maitland Street by building-up the east end of the existing pedestrian Island to the north of Ryries public house. BBS to confirm what works will be required to accommodate this and to update their proposals / drawings.

2. BBS confirmed that the Storage area 1b proposed for the north side of Morrison Street could be relocated to the south side of West Maitland Street to assist with traffic flows in Morrison street.

3. BBS confirmed that the fence line designating the working area around the existing East Island outside the Haymarket Bar would reduce traffic flow from Morrison Street into West Maitland Street to one lane.

Phase 2 Drawing SK-TM-002

1. BBS confirmed that with the East Island removed in Phase 1a that a 2 lane flow will be re-instated from Morrison Street into West Maitland Street.

Phase 3 Drawing SK-TM-003

1. BBS proposal to relocate bus stop from outside Ryries Bar to West End of Haymarket Terrace and build-up in the West end of the Scotrail Carpark adjacent to existing Air Quality Monitoring station to provide a standing area for bus passengers is agreed.

2. BBS proposal to relocate bus stop from outside Haymarket Station forecourt to West End of Haymarket Terrace and build-up in the West end of the Scotrail Carpark adjacent to existing Air Quality Monitoring station to provide a standing area for bus passengers agreed.

3. CEC to advise on situation with relocation of taxi rank from Haymarket Station carpark.

4. BBS to submit proposals for enabling works in Station forecourt

5. Caley Ale House - Demolition re-programmed from August 2008 to April 2008 following re-sequencing of programme to work from Haymarket into city centre. (Licence to vacate expires 31/3/8).

6. Junction Construction - Westbound traffic from Morrison Street to Haymarket Terrace will be reduced to one lane along the front of Ryries Bar / Haymarket Station.

7. Junction Construction - BBS to submit Traffic Management proposals for diverting general eastbound traffic from Haymarket Terrace into the surrounding streets (Coates Gardens or Rosebery Cresent) and exiting further up West Maitland Street, whilst maintaining a single bus lane eastbound through Haymarket junction and having a single westbound lane on Haymarket Station (South) side.(Applies to Phases 5 & 6 also)

Phase 4A Drawing SK-TM-004

1. Bus stop outside Haymarket station will be relocated during Phase 3 above

2. Taxi rank in station forecourt will be moved during Phase 3 above

Phase 4B Drawing SK-TM-005

1. Bus stop outside Haymarket station will be relocated during Phase 3 above

2. Taxi rank in station forecourt will be moved during Phase 3 above

Phase 5 Drawing SK-TM-006

1. BBS to submit Traffic Management proposals for diverting general eastbound traffic from Haymarket Terrace into the surrounding streets (Coates Gardens or Rosebery Cresent) and exiting further up West Maitland Street, whilst maintaining a single bus lane eastbound through Haymarket junction and having a single westbound lane on Haymarket Station (South) side (As per Phase 3)

2. Proposed diversion route for Westbound traffic through existing Haymarket station forecourt will require enabling works. (As per phase 3)

3. This phase requires Caley Ale House to have been demolished and would assist the construction to have continued junction section off-road and build the first part of Haymarket Viaduct through the Caley footprint. BBS to programme accordingly.

4. Programme logic to be checked to interface with Haymarket Terrace sub-station.

Phase 6A/6B Drawing SK-TM-007

1. BBS to submit Traffic Management proposals for diverting general eastbound traffic from Haymarket Terrace into the surrounding streets (Coates Gardens or Rosebery Cresent) and exiting further up West Maitland Street, whilst maintaining a single bus lane eastbound through Haymarket junction and having a single westbound lane on Haymarket Station (South) side (As per Phase 3)

2. TEL raised concerns on the temporary reduction of Dalry Road northbound to one lane and the impact of stationary buses. BBS requested to review potential to have 2 lanes running northbound on Dalry Rd towards West Maitland Street with the existing 2 lanes from Morrison Street southbound to Dalry Road reduced to one. BBS to update proposal.

3. BBS to advise on proposals for maintaining safe pedestrian access to the frontage of Haymarket Station.

General

1. BBS to advise proposals for ensuring pedestrian access and safety across Haymarket junction during construction period as central islands will be removed.

2. BBS to consider options during Programme Development and submit proposals for diverting traffic away from the A8/Haymarket and on to other approach routes into the city to ease congestion prior to Haymarket area construction.

3. Temporary Traffic Management design is responsibility of BBS and must consider such items as servicing of premises and through-routes for emergency vehicles etc

Palmerston Place / Torphicen Junction to Manor Place

Limits

West Maitland Street (West Side of Palmerston Place (excluding left turn into Palmerston Place) to West side of Manor Place (includes left turn in Manor Place)
West Maitland Street to Torphicen Place/Manor Place

Agreements

Jnc 81 Layout Drawing Phase's 1-2-3

1. BBS proposal is to reduce existing 4 lanes to 2 only eastbound to allow for a sufficient working area. Diversion strategy is a continuation of that adopted for Haymarket junction i.e. divert general eastbound traffic from Haymarket Terrace into the surrounding streets (Coates Gardens or Rosebery Cresent) and exiting further up West Maitland Street.

2. BBS confirmed that the right turn is retained from West Maitland into Torphicen Place.
   Proposal agreed in principal with BBS-CEC-TEL-L&BP subject to confirmed design dimensions and agreement of further detailed traffic management. See attached layout drawings.

3. CEC advised that Torphicen Street becomes 2 way in the final scheme with 2 lanes heading south and 1 lane heading north across the junction and into Palmerston place. BBS unaware of this design and the associated kerb re-alignments.
4. A north/south flow from Palmerston place to Torphichen street to be maintained during the construction of section 1d. This junction will be re-visited at the completion of the rest of section 1d to complete the construction of this section.

West Maitland Street Junction with Palmerston Place/Torphicen Street

Limits

West Side of Palmerston Place Junction on West Maintland Street to East side of Junction with Torphicen Street

Agreements

Shandwick Place (East side of Manor Place to West Side of Queensferry Street)
East Side of Manor Place to entrance to Coates / Atholl Crescents
Jnc 79 & 80 Layout Drawing Phase's 1-2-3

1. Following lengthy discussion it was agreed to merge Phase's 2 and 3 as shown to close the junction between Manor Place and West Maitland Street with traffic diverted down Palmerston Place.

2. Proposal agreed in principal with BBS-CEC-TEL-L&BP subject to confirmed design dimensions and agreement of further detailed traffic management. See attached layout drawings.

3. Existing road width is proving challenging to fit in a construction zone, a safety zone and maintain a traffic flow. BBS requested a x-section of the road.

4. Noted that if the revised Haymarket junction is constructed first then that would reduce Traffic Management challenges on Shandwick Place.BBS to consider in programme development.

5. Identified that the permanent measure could prove problematic as in the example of Shandwick Place there would be a centre island tram stop constructed whilst still maintaining two-way traffic flow prior to the permanent TRO approval, and that a further TTRO may be required to divert traffic away from this area. Needs to be considered for all areas.

Shandwick Place (Full Closure)

Limits

East side of Manor Place to West Side of Queensferry Street ,Entrance to Coates / Atholl Crescents to Lothian Road Junction

Agreements

No Construction methodology drawings yet developed for this section

1. Noted that if the revised Haymarket junction is constructed first then that would reduce Traffic Management challenges on Shandwick Place. BBS to consider in programme development.

2. Proposal is to close Shandwick Place and divert all traffic in both directions through Coates and Atholl crescents. Proposal agreed in principal with BBS-CEC-TEL-L&BP subject to submitted drawings, confirmed design dimensions and agreement of further detailed traffic management.

3. Identified that the permanent measure could prove problematic as in the example of Shandwick Place there would be a centre island tram stop constructed whilst still maintaining two-way traffic flow prior to the permanent TRO approval, and that a further TTRO may be required to divert traffic away from this area. Needs to be considered for all areas.

Lothian Road Junction

Limits

Junction between Lothian Road / South Queensferry Street/ Hope Street / Princess Street to east side of South Charlotte Street junction

Agreements

Lothian Road Junction

Jnc 72 & 70 Layout Drawing Phase's 1-2-3-3a-4

1. Proposal agreed in principal with BBS-CEC-TEL-L&BP subject to confirmed design dimensions and agreement of further detailed traffic management. See attached layout drawings. Enabling works required
    a. Opening the junction between Shandwick place / Queensferry Street/Hope Street (Fraser's Corner) and creating a gyratory in a clockwise direction. Will be done to some extent by MUDFA.
    b. The pedestrian flow across the Fraser's corner junction must be accommodated.

2. L&BP raised a concern with the potential for traffic performing a U-turn on the east side of Charlotte Square to access George Street.

3. Initial discussions took place around traffic management at Princes St, South Charlotte St, Charlotte Sq, Hope St. with the intention of introducing a virtual roundabout situation with traffic on Princes St running on the north side of Princes Street only between South Charlotte Street and Lothian Road junction. This would need enabling works to open the junction between Shandwick place / Queensferry Street/Hope street (Fraser's Corner)

Lothian Road junction to Princes St/South Charlotte St.

1. CEC advised that road alignment has changed from that shown on the drawings with BBS.

2. CEC advised that the pedestrian flow across the Fraser's corner junction in both east/west and north/south directions must be accommodated.

3. Issue whether or not re-profiling is required to Princes Street road surface and to what extent. Current design required.

4. Noted that once left turn is incorporated from South Charlotte St. to Princes St. eastbound that this will be for buses and taxis only.

5. 3 lanes running south in South Charlotte Street to be configured so that 2 lanes turn right into Princes Street for Lothian Road/Shandwick Place / Queensferry Street and 1 lane turns left into Princes Street for bus/taxi traffic only-Post construction

6. Phase 3 as shown on attached drawings can only be completed if existing road dimensions are sufficient. Await design details.

Princess Street (East – Central – West combined)

Limits

East Side of South Charlotte Street to the mid point of the Waverley bridge / Princes Street junction

Princes St. West Agreements

East side of South Charlotte Street to West Side of The Mound
East Side of South Charlotte Street to mid Fredrick Street Junction

Options Discussed:

Layout Drawing Phase's 1-2-3-4

1. Fredrick Street scheduled to be re-opened by MUDFA under St.Andrew Square programme by mid February 2008.

2. Princes Street Central Reservation may be removed by MUDFA prior to BBS requiring site.

3. A single phase between South Charlotte Street and Fredrick Street would remove up to 4 bus stops. TEL requested that this section be reviewed to terminate at the mid point of the Fredrick Street junction thus enabling a 2-way flow to be retained during both this and the following phase.

4. BBS were requested to submit proposals to split Princes St. into 3 phase's being
    a. East Side of South Charlotte Street to the mid point of Fredrick Street junction.
    b. Mid point of Fredrick Street junction to Mid point of the Mound Junction.
    c. Mid point of the Mound Junction to Waverley Bridge / South St.Andrew Street junction

5. BBS to be able to demonstrate the benefits to programme of this logic.

6. BBS proposal to split Princess Street into only 2 phase's
    a. East Side of South Charlotte Street to the mid point of Mound junction.
    b. Mid point of Mound junction to Waverley Bridge / South St.Andrew Street junction.

7. BBS to submit proposals with examples of how this would benefit programme and costs.

8. TEL have requested that if possible 2 lanes are retained in a westerly direction. BBS advised that the required width incorporating 2 lanes of traffic, working zone and safety zone may not be available. To be confirmed.

9. BBS indicated that complete closure had not been considered in their programme submission and that significant programme duration reduction would be expected in this area. Programme to be updated.

10. BBS requested that design x-sections of the road construction be made available.

Princes Street Agreement

Due to significant programme duration reduction made after the complete closure option exercise, it has been reprogrammed with complete closure of Princes street (from the east side of South Charlotte Street to the mid point of the Waverley bridge / Princes Street junction) whilst maintaining a single lane north-south flow across the Mount Junction under traffic light control.

Princess Street (Mount Junction)

Limits
Mound Junction

Mound Junction Agreements

Jnc 67 Layout Drawing Phase's 1-2-3-4-5-6-7-8

1. Current Proposal is to re-open Fredrick Street and move north/south traffic from Hanover Street to Fredrick Street. Construction will reduce traffic lanes to 1 lane westbound and 2 lanes eastbound. (This proposal assumes bus traffic remains on Princes St.)

2. Fredrick Street requires to be re-opened to traffic sooner rather than later to facilitate both MUDFA and INFRACO works. (Post mtg note – this requires to be done by end January 2008 to facilitate MUDFA works in St.Andrew Square

Waverley Bridge Junction

Limits

East end Princes Street at Junction with South St Andrew Street and Waverley Bridge

Jnc 49-50-53-63-66 Layout Drawing Phase's 1-2-3-4-5-6-7-8

1. Concern on amount of time in construction programme to construct this junction curve (37 days) due to complexity of traffic management issues. This has been resolved with the proposal of 3 phase construction discussed at meeting 6th Nov. and included in Construction methodology drawing pack received 12th Nov. under which the junction is now closed to all traffic thus providing a secure construction environment.

St. Andrew Square

Limits

North St Andrew Street to South St Andrew Street excluding junction York Place / North St Andrew Street and junction Princes Street / South St Andrew Street

Agreement:

1. East side of the Square will be closed to traffic by the time BBS require to construct in this area. BBS need to consider servicing of premises during construction.

2. If the re-profiling of road surface on South St.David Street currently being done as part of MUDFA works was continued through the left turn junction onto Princes St. (eastbound) then this would greatly assist traffic management proposals for Infraco. To be considered in MUDFA programme.

North St.Andrew Street to York Place Junction

Limits

Junction York Place / North St Andrew Street

Agreements

1. BBS unaware of any design associated with build-up of road levels at junction and require understanding of current design for this area. No information can be found in the data room indicating that this junction has to be built-up by around 500-600mm.

2. BBS were advised that this is an area where utilities may be left for Infraco.

3. BBS advised that to construct this junction the westbound left turn from York Place into North St.Andrew St would have to be banned. This will already have been done under MUDFA works.

4. BBS suggested diverting traffic through Herriot Row / Abercromby Place but after some discussion this was deemed unworkable.

5. Princes Street could be used as a diversion route to take traffic of York Place if Princes St construction programme could be completed first. BBS to consider in programme development.

6. Previous proposal to divert southbound traffic from Leith Walk to Leith Street and Princes Street was deemed unworkable by both TEL and L&BP as Leith Street already operating at capacity.

7. Issue is that major engineering works are required at this junction and traffic will have to be thinned-out by other diversions prior to reaching this location. Wider area diversion strategy required as mentioned above.

York Place

~~Limits~~

York Place from junction with North St Andrew Street to junction with Picardy Place/Broughton Street but excluding both of these junctions

~~Agreements~~

1. Access to Bus station at Elder street junction will require access to be maintained at all times. To be included in proposals.
2. Preferred option is two retain 2 lanes of traffic in one direction with the opposite flow diverted to a location yet to be decided.

Picardy Place

~~Limits~~

Between Picardy Place roundabout at its junctions with Broughton Street and Leith Street and London Road roundabout

1. CEC advised that the T-Junction proposal is being taken forward. SDS are currently working-up TSS initial design so that a “fixed” conceptual design will be available in December to allow BBS to programme and cost.

2. tie (D.Sharp) provided a draft of the final design and talked through with BBS. A copy of the draft layout plus a copy of the original layout incorporating Utilities was provided to BBS for information only. See attached. Formal issue expected later this week. Dwgs. B13703/SK/27 and B13703/SK/28

London Road Junction

~~Limits~~

London Road with its junctions to Leith Walk south and Leith Street

~~Agreement~~

1. CEC advised that this is now a T-junction design and has been for some time. Current design to be confirmed to BBS.

2. Understood that under MUDFA that the existing roundabout and clock would be removed this year. To be confirmed. (Post meeting note – removal of roundabout underway and clock to be removed to CEC storage w/c 19th Nov.2007)

Leith Walk (South)

~~Limits~~

Leith Walk (South) – Junction at London Road to Balfour Street

~~Agreement~~

1. Dalmeny Street and Iona Street cannot be closed together as each is a diversionary route for the other.

2. Pilrig Street and MacDonald Road cannot be closed together as each is a diversionary route for the other.

3. Bus movements between Elm Row and Annandale Street are critical. Provided MacDonald Road and Hopetoun Street are accessible then diversions northbound only could be accommodated between the hours of 08:00 and 18:00.

4. Southbound from Annandale Street to Elm Row is needed at all times.

5. Potential for TRO impact on permanent measures to be considered during programme development.

6. Proposal agreed in principal with BBS-CEC-TEL-L&BP subject to confirmed design dimensions, submitted drawings and agreement of further detailed traffic management. BBS to submit drawings to support proposal.

Leith Walk (North)

~~Limits~~

Leith Walk (North) – Junction Balfour Street to just South of Foot of the Walk junction with Great Junction Street

~~Agreements~~

Potential for TRO impact on permanent measures to be considered during programme development.

Proposal agreed in principal with BBS-CEC-TEL-L&BP subject to confirmed design dimensions, submitted drawings and agreement of further detailed traffic management. BBS to submit drawings to support proposal

Foot of the Walk

~~Limits~~

Foot of the Walk / Great Junction Street / Constitution Street / Duke Street Junctions

~~Agreement~~

1. Existing pedestrian crossings and associated signalling moved back into Duke Street, Great Junction Street, Leith Walk, Constitution St away from the junction.

2. Construction at south end of constitution street is extended as far south into Great Junction St junction as practically possible.

3. Traffic management in a East/West direction is reduced to one lane over the already built section in 2 above south of constitution st and a L-shape construction is done incorporating remaining 2/3rds of Great Junction Street and ½ of Leith Walk.

4. Traffic management in a East/West direction is reduced to one lane over the already built section in 2 above south of constitution st and a L-shape construction is done incorporating remaining 2/3rds of Duke Street and ½ of Leith Walk.

5. Proposal agreed in principal with BBS-CEC-TEL-L&BP subject to confirmed design dimensions, submitted drawings and agreement of further detailed traffic management. BBS to submit drawings to support proposal.

Constitution Street (South)- Closure

~~Limits~~

Constitution Street north of junction with Great Junction St/Duke Street to North side of Queen Charlotte Street (includes junction)

~~Agreement~~

Due to permanent TRO constraints the works in constitution street should be programmed so that they are not completed until after the TRO is in place. BBS to consider during development of programme

Constitution Street- Closure

Limits
Constitution Street north of junction with Queen Charlotte Street to south side of junction with Baltic Street / Bernard Street

Agreement

Due to permanent TRO constraints the works in constitution street should be programmed so that they are not completed until after the TRO is in place. BBS to consider during development of programme.

Constitution Street (North)-Closure

Limits

Constitution Street north of junction with Baltic Street / Bernard Street to roundabout at Casino Square

Agreement

Due to permanent TRO constraints the works in constitution street should be programmed so that they are not completed until after the TRO is in place. BBS to consider during development of programme.

Ocean Drive

Limits
Ocean Drive from roundabout at Casino Square to Junction with Lindsay Road including Victoria Quay Roundabout

Agreement

Casino Square
Roundabout is removed and essentially becomes a T-junction.

Ocean Drive

1. Tower Place Bridge – Clarity required on whether or not an additional footway is required. Bridge is to be widened.

2. CEC advised that their understanding is that the CoCP will be agreed with Forth Ports w/e 16th November and that CEC will be adopting the road therefore becoming the owners.

3. Casino Square to Ocean Terminal – BBS understood that the alignment in this section was in the verge only moving into the roadway to cross Tower Place and Victoria Dock bridges. CEC advised that the alignment in this section is in the centre of the road.

4. CEC also adopting the section in front of Ocean Terminal upto Ocean Drive West

5. Temporary road to be built through existing blaes carpark incorporating part of existing road. BBS to incorporate in programme logic.

6. Access must be maintained to carpark at North end of Ocean Terminal at all times. BBS to incorporate in programme logic.

7. Constraints expected outside of Ocean Terminal to be advised

Victoria Quay Roundabout

Becomes a T-junction in the permanent measure with controlled pedestrian crossing. This conflicts with the design BBS currently have. Data room to be checked for correct design.

Lindsay Road to Newhaven

~~Limits~~
Lindsay Road at junction with Ocean Drive to Newhaven Road

~~Agreement~~

This section is currently under re-design as there is an expected change to the alignment. This is also a section where MUDFA and INFRACO may work in parallel as the road levels may be changed by up to 2m.

A8 Underpass

Agreement

- BBS used AIP report as a basis as was a very detailed report on design, construction methodology and associated traffic management.

  The change to design criteria around the A8 retained wall (soil nailing rather than contiguous piles) now means that the wing walls are now stand-alone structures rather than as previously when they were part of the A8 contiguous piled wall.

- Phase 1 (North Side)
  The traffic management associated with this will see the closure of the near-side lane (eastbound) on the Gogar roundabout and one lane of the current eastbound (city bound) slip road from the Gogar roundabout closed-off using a physical TVCB (temporary vehicle control barrier).

  Once the traffic management is in place construction will commence on the North side with a top down dig to allow enough spoil to be removed to allow the construction of the first part of the tunnel roof soffit. A base layer will be put in place and timbered over which will allow the first section of the tunnel roof to be cast.

  2 rows of piles have to be driven in a north-south direction leading into the north access to the tunnel. This will be supported by east-west sheet piling to ensure integrity between the worksite and the traffic lane.

  Following completion, the road surface will be re-instated.

- TEL commented that the need for cross-over flows from the slip road to city bound lanes and from the A8 under the roundabout to Leith bound lanes needs to be maintained as well as considering the impact of stacking in the slip lane onto the roundabout itself.

- tie proposed the use of temporary traffic lights to control the merge across lanes with temporary stop lines painted on the road both at the east end of the slip road and the east end of the A8 exiting from under the roundabout. The location of these lights would enable integration with the existing controllers for the lights on the roundabout thus keeping them in sequence.

- It was agreed by all present that physical separation of traffic, however difficult, i.e prohibit city bound access from Gogar roundabout slip road, should be considered during traffic modelling

- Phase 2

  Following the completion of phase 1 a temporary running lane will be built in the verge to the north of the existing slip-road. The traffic management will then switch to the inside lane of the slip road although by the use of the temporary road 2 lanes of traffic will then be retained on the slip road city bound.

  Traffic management to the lanes under the roundabout will see the eastbound (city bound) lanes closed to public traffic with a contra-flow in place to allow east and west bound traffic to run on the westbound (towards airport) lanes only.

- Phase 3

  The eastbound slip road is fully re-opened in original configuration.

  The contra-flow on the lanes under the roundabout will be switched from the westbound lanes to the eastbound lanes i.e. 2 directional traffic flows on eastbound (city bound) lanes only with the westbound lanes closed to public traffic.

  The west-bound slip-road from the A8 to the Gogar roundabout will be reduced to one lane at the point of the sub-way but will open out again to three lanes prior to meeting the roundabout. This ensures that traffic can set itself for exits to the Gyle or City bypass.

- Phase 4 (South Side)

  This will see the westbound slip road from the A8 into the Gyle centre closed completely with Gyle bound traffic directed up to the Gogar roundabout then back into the Gyle.

  Note that sheet piling required for phases 1 and 4 is very close to the running lanes and will therefore have to be installed either overnight or in periods where the road can be closed to traffic.

  Hammer noise and vibration radius will also have to be considered with residential properties situated just to the north-east of the worksite.

- Phases 1 & 2 will provide the most challenging in terms of traffic management with the part closure of slip roads.

- Tie requested BBS to consider the implications of re-programming the A8 underpass from its current north–south to south–north i.e phases 1-4 changed to 4-1.
  Both TEL and L&BP requested that the construction sequencing be maintained as programmed i.e North-South as this completes the most difficult phase 1 in terms of traffic management at the most suitable period.

- Tie confirmed that the sewer diversion would be carried out under the MUDFA contract and should have no impact on the underpass construction as the subway construction is currently programmed to complete in June 2009 with the next activities for drainage and

trackwork not programmed to commence until November 2009 as the logic is dependant on the completion of structure S32 Depot Access bridge.

- If the depot access bridge has been re-located in the current design, further north then this can be started earlier as there will be no impact on underpass construction and associated traffic management.

A8 Underpass / Guided Busway Interface

- As design changes have evolved and the location of the Gogar Depot has moved north, the requirement for a contiguous piled wall along the north side of the A8 has been reduced to a requirement for a soil nailed wall only.

  This should reduce the construction duration required for the A8 wall and thus make it possible to commence the A8 Underpass earlier.

- This has to be managed to avoid the Royal Highland Show at Ingliston Showground in June 2008 as this will put immense pressure on any traffic management in place prior to the show.

  CEC events team to confirm dates for Royal Highland Show (TC)

- BBS to re-programme A8 Underpass to commence in late June 2008, (following completion of Highland Show) which will see completion approx end of 3rd week of April 2009 resulting in a 7-8 week overlap with the guided busway construction commencing in February 2009.

SDS FULL DESIGN PROGRAMME @ V26

tie

Activity ID	Activity Name	Original Duration	Start	Finish
SDS57010	SDS Provide Parameters to TPi to enable Calc of Runtime	0d		23-Oct-06 A
Traffic Modelling First Pass		167d	02-Jul-07 A	28-Feb-08
SDS68140	H1: VISSM: Complete Airport section models and review way Granton Waterfron is modelled	83d	10-Sep-07 A	18-Jan-08
SDS68530	F: VISSIM model areas 1 and 2 review, espeically way Foot of the Walk is modelled	99d	15-Aug-07 A	18-Jan-08
SDS74120A	A: Code most of VISUM and models 7&8 VISSIM, run VISUM, cordon flows to VISSIM and run test 1	9d	02-Jul-07 A	13-Jul-07 A
SDS74130B	B: Discuss test 1 results with CEC, tie and TEL. Get direction on tests 2 and 3	5d	16-Jul-07 A	20-Jul-07 A
SDS74140C	C: Recode VISSIM models 7 & 8 to reflect changes for test 2 and 3 and run	5d	23-Jul-07 A	27-Jul-07 A
SDS74150D	D: Discuss test 2 and 3 results with CEC, tie and TEL. Get direction on final changes	12d	27-Jul-07 A	14-Aug-07 A
SDS74150D1	Issue Notification of Phase Completion Letter to tie (Activity D)	0d		24-Sep-07 A
SDS74150D11	Issue Notification of Phase Completion Letter to tie (Activity F)	0d		24-Sep-07 A
SDS74160E	E:Code VISSIM areas 1 and 2, cordon flows from first VISUM run, and run models 1 and 2	9d	09-Jul-07 A	20-Jul-07 A
SDS74170F	F: Discuss results of model areas 1 and 2 with CEC/TELand get direction on final changes	16d	23-Jul-07 A	14-Aug-07 A
SDS74180G	G: Run LINSIG for Leith Walk - junctions not previously modelled, pass timings to Main iteration VISUM and VISSIM models	115d	23-Jul-07 A	18-Jan-08
SDS74190H	H: Code remaining VISSIM model areas, cordon flows from first VISUM run, and run remaining VISSIM models	37d	16-Jul-07 A	07-Sep-07 A
SDS74200I	I: VISSIM: Discuss model changes with tie/CEC and get sign off	5d	21-Jan-08	25-Jan-08
SDS74210J	J: Code remaining tram route in VISUM not coded in task A (ie Granton, Forth Ports) and incorporate results of D, F & I	37d	16-Jul-07 A	07-Sep-07 A
SDS74300	R1: Confirmation of junction designs to model (except Forth Ports area) inc Picardy Pl, Torphichen Pl, Frederick St	5d	21-Jan-08	25-Jan-08
SDS81770	H2: VISSIM: Any Further modelling required e.g. Picardy Place	83d	10-Sep-07 A	18-Jan-08
SDS81780	H3: VISSIM: Complete any other changes	83d	10-Sep-07 A	18-Jan-08
SDS81790	H4: Linsig: Pass 1 of Airport section junctions	11d	07-Jan-08 A	22-Jan-08
SDS81800	R2: Input design Changes to VISUM, VISSIM	32d	14-Jan-08	28-Feb-08
SDS81810	R3: Input Linsig Pass 1 timings into VISUM/VISSIM	32d	14-Jan-08	28-Feb-08
Main Traffic Model Iteration		366d	22-Jan-07 A	25-Jun-08
SDS67680	Issue Traffic Modelling Update Report to tie (& Approval From CEC)	0d		13-May-08
SDS69490	S: Run AM, Interpeak & PM VISUM/VISSIM Models. Feed Traffic Data Into LINSIGs & TRANSIT	14d	29-Feb-08	20-Mar-08
SDS69500	CEC Approval Of Traffic Modelling Report	19d	14-May-08	11-Jun-08
SDS69530	AF: Create Individual Junction LINSIG Models Using Detailed Geometry	248d	22-Jan-07 A	08-Feb-08
SDS69540	AG: Run AM, Interpeak & PM Peak LINSIGs Using Output From VISSIM Models	14d	07-Mar-08	31-Mar-08
SDS69550	AI: TRANSYT: review detailed geometry and make any design changes	248d	22-Jan-07 A	08-Feb-08
SDS69560	AJ: Strategic TRANSYT: Input Traffic Flows From VISSIM	23d	07-Mar-08	14-Apr-08
SDS69570	AK: Run AM, Interpeak & PM Peak TRANSYT Using Output From LINSIG Models	9d	15-Apr-08	28-Apr-08
SDS69580	AM Produce Junction Assessment Report for CEC	38d	14-Mar-08	13-May-08
SDS69590	Update Modelling Report To Any CEC Comments	9d	12-Jun-08	25-Jun-08
SDS70890	AH: Tram ' Green Wave': identify junctions where tram signal stages need adjusting	19d	14-Mar-08	14-Apr-08
SDS81820	AE: Linsig Pass 2: Review intergreens and braking times for tram minimum green times	37d	10-Dec-07 A	08-Feb-08
VO245 Revised Modelling Scope including Wider Area Modelling		56d	03-Sep-07 A	19-Nov-07 A
SDS74230K	K: Identify wider area junction issues and possible solutions to model	53d	03-Sep-07 A	19-Nov-07 A
Model Based On Preliminary Design Inc. Charettes		166d	02-Jan-07 A	22-Aug-07 A
SDS68490	tie/CEC Provide Comments On VISUM/VISSIM Cal/Val Reports	117d	02-Jan-07 A	29-Jun-07 A
SDS68500	Refinements to Models	117d	02-Jan-07 A	29-Jun-07 A
SDS68510	Future Development Area Trips eg Waterfront	50d	12-Feb-07 A	27-Apr-07 A
SDS68520	Traffic Counts At Junctions Previously Not Counted	68d	15-Jan-07 A	27-Apr-07 A
SDS69520	AE: Calc Braking Times In Order To Calc Tram Stage Min Green Times, and Tram Post-intergreen Times	95d	29-Mar-07 A	22-Aug-07 A
Design & Junction Modelling Iterations		72d	19-Oct-06 A	06-Feb-07 A
SDS60600	LINSIG Modelling for Section 2A & Discuss Changes With Junction Designer	5d	19-Oct-06 A	25-Oct-06 A
SDS60610	LINSIG Modelling for Section 3A & Discuss Changes With Junction Designer	1d	08-Jan-07 A	08-Jan-07 A
SDS60620	LINSIG Modelling for Section 3B & Discuss Changes With Junction Designer	5d	08-Jan-07 A	12-Jan-07 A
SDS60630	LINSIG Modelling for Section 3C & Discuss Changes With Junction Designer	5d	31-Jan-07 A	06-Feb-07 A
SDS60650	LINSIG Modelling for Section 5B & Discuss Changes With Junction Designer	2d	05-Jan-07 A	08-Jan-07 A
SDS60670	LINSIG Modelling for Section 7A & Discuss Changes With Junction Designer	1d	20-Dec-06 A	20-Dec-06 A
Tram Simulation (Task 200.2.2)		595d	29-Nov-05 A	31-Mar-08
M01020	Run Time Modelling - Issue 1	0d		29-Nov-05 A
M01030	VO60 General Runtime Modelling Assistance	157d	29-Aug-06 A	30-Apr-07 A
Stage 3 - Operational Simulations for Preliminary Design		441d	14-Jun-06 A	12-Mar-08

SDS55860	Dundas and Wilson Compile Draft TRO Articles (REVISION OF PROCESS)	72d	24-Aug-07 A	10-Dec-07 A
SDS67050	Preperation of draft relevant Maps showing proposed traffic regulation measures	9d	23-Jul-08	05-Aug-08
SDS70650	Analyse Objection & Prepare Objections Report	19d	05-Feb-09	04-Mar-09
SDS70670	Council decision to Make Orders or proceed to Public Hearing	19d	06-Mar-09	02-Apr-09
SDS70680	Orders made by CEC and Public Notice of Making Orders	9d	16-Apr-09	29-Apr-09
SDS70690	Preparation of Notices for Making of Orders	5d	03-Apr-09	09-Apr-09
SDS70700	TRO Legal Challenge Period	28d	30-Apr-09	10-Jun-09
SDS70710	TRO Legal & Able to be Enacted	0d		11-Jun-09
SDS70720	Commence Implementation	0d		11-Jun-09*
SDS70800	Issue Draft Relevant Maps to CEC For Comments	0d		05-Aug-08
SDS70820	Preparation of letters with copy Relevant Map to issue to Statutory Consultees	1d	19-Sep-08	20-Sep-08
SDS74260	Dundas and Wilson Complete Appropriate Deposit Documents (REVISION OF PROCESS)	72d	24-Aug-07 A	10-Dec-07 A
SDS74270	Briefing session with Member based on Relevant Map and receive approval to conduct Statutory Consultation	9d	03-Sep-08	16-Sep-08
SDS74280	Collate Documents for Public Deposit	5d	18-Dec-08	24-Dec-08
SDS82170	Issue Draft Relevant Maps to tie For Comments	0d		05-Aug-08
SDS82180	Receive tie and CEC comments on proposed traffic regulation meansures	9d	06-Aug-08	19-Aug-08
SDS82200	Informal briefing session with Consultees based on relevant maps	5d	06-Aug-08	12-Aug-08
SDS82210	Preparation of final draft of Relevant Map showing proposed traffic regulation measures	5d	20-Aug-08	26-Aug-08
SDS82220	Issue Final Draft Relevant Maps to CEC For Approval	0d		26-Aug-08
SDS82230	Issue Final Draft Relevant Maps to tie For Approval	0d		26-Aug-08
SDS82240	Receive tie and CEC Approval of final draft of Relevant Map	5d	27-Aug-08	02-Sep-08
SDS82250	Briefing Session for listed Consultees on Final Draft Orders	5d	20-Nov-08	26-Nov-08
SDS82270	Briefing Session for Members on Final Draft Orders	5d	20-Nov-08	26-Nov-08
SDS82280	Meeting with Police, emergency services, bus operators and road haulage to discuss proposed measures	19d	22-Sep-08	17-Oct-08
SDS82290	Preparation of Draft Schedules	19d	06-Aug-08	02-Sep-08
SDS82300	Preparation of Draft Articles	19d	06-Aug-08	02-Sep-08
SDS82310	Receive Consultation Responses	20d	22-Sep-08	20-Oct-08
SDS82320	Analyse Responses and Review and Finalise TRO in view of Statutory Consulation Process	14d	21-Oct-08	10-Nov-08
SDS82330	Meeting with Roads Authority to appraise issues raised by Consultees	5d	30-Oct-08	05-Nov-08
SDS82350	Finalise Schedules	5d	11-Nov-08	17-Nov-08
SDS82360	Finalise Articles	5d	11-Nov-08	17-Nov-08
SDS82370	Finalise Statement of Case and Statement of Reasons	28d	04-Sep-08	15-Oct-08
SDS82380	Draft Statutory Notice for Public Advertisment	1d	16-Oct-08	16-Oct-08
SDS82390	Council decision to proceed to Public Deposit	19d	20-Nov-08	17-Dec-08
SDS82400	Arragement for Public Exhibition and Deposit of Draft Orders	5d	25-Dec-08	31-Dec-08
SDS82410	Advertisments to Newspapers	5d	01-Jan-09	07-Jan-09
SDS82420	Period for objections to be logged	19d	08-Jan-09	04-Feb-09
SDS82430	Briefing Session for Members on Objections	5d	26-Feb-09	04-Mar-09
Public Hearing		557d	24-Sep-07 A	30-Nov-09
SDS34650	TRO Public Hearing For Order 5 (Statutory Processs)	28d	21-Jan-09	03-Mar-09
SDS34670	TRO Legal Challenge Period (Statutory Processs)	28d	20-Oct-09	30-Nov-09
SDS34730	TRO Orders Made By CEC (Statutory Processs)	0d		19-Oct-09
SDS34820	Prepare & Publish Making Notice	10d	25-Sep-09*	09-Oct-09
SDS34870	First Permanent Measures Able To Take Place	0d		30-Nov-09
SDS55790	Reporters Report (Statutory Processs)	45d	04-Mar-09	08-May-09
SDS55800	Review, Recommend & Conclude from Reporters Report (Statutory Processs)	85d	11-May-09	14-Sep-09
SDS55850	Preparation For Public Hearing	53d	24-Sep-07 A	10-Dec-07 A
SDS55900	Issue Report to CEC On Reporters Findings for Order 5 Hearing	0d		14-Sep-09
SDS56140	Report to CEC for Approval to Make TRO for Order 5	21d	15-Sep-09	14-Oct-09
SDS70840	TRO Orders Made By CEC (Statutory Processs)	0d		30-Nov-09
SDS82840	Preparation For Public Hearing	19d	18-Dec-08	14-Jan-09

Traction Power Systems - General TPS - System Wide		444d	25-Jul-06 A	25-Apr-08
A1175	Evaluate Traction Power Equipment and Finalise, Substation Equipment Specification - Update 2 (TPS 18)	14d	04-Dec-06 A	22-Dec-06 A
A13820	Undertake Calculation Of DC Protection Settings For Complete TPS System (TPS 21)	42d	08-Dec-06 A	16-Feb-07 A
A13840	Issue Generic TSS Protection Schematic (TPS 20)	0d		18-Dec-06 A
A13850	Issue DC Protection Settings For Complete TPS System (TPS 21)	0d		16-Feb-07 A
A13860	Develop Traction Power Cable and Routing Schedule (Owner T Bishop) (TPS 12DD)	77d	11-Sep-06 A	10-Jan-07 A
A13870	Issue Traction Power Cable and Routing Schedule (TPS 12DD) (Owner T Bishop)	0d		10-Jan-07 A
A13880	Detail Design Electrical Safety - Prepare Update to Electrical Nonenclature Report - Update 1 (TPS 25)	29d	18-Aug-06 A	02-Oct-06 A
A13920	Detail Design Input Into Electrical Specifications For Track	5d	12-Jan-07 A	18-Jan-07 A
A13930	Prepare Generic SCADA I / O Schedules (TP 28)	1d	12-Jan-07 A	15-Jan-07 A
A13940	Issue Generic SCADA I / O Schedules (TPS 28)	0d		16-Jan-07 A
A14160	Detail Design Electrical Safety - Prepare Update to Electrical Nonenclature Report - Update 2 (TPS 25)	7d	08-Jan-07 A	16-Jan-07 A
A14170	Issue Electrical Nonenclature Report - Iteration 2 (TPS 25)	0d		16-Jan-07 A
A1720	Evaluate Results of Traction Power Simulation Modelling and Modify Interim TPS System Proposals	10d	07-Aug-06 A	21-Aug-06 A
A1790	Prepare Interim TPS Scheme Development Report (TPS3DDB)	53d	29-Aug-06 A	15-Nov-06 A
A1800	Establish / Confirm System Design Criteria To Be Applied	2d	20-Nov-06 A	21-Nov-06 A
A1810	Obtain and Review Data Relating To TPS System Detailed Design	2d	17-Nov-06 A	20-Nov-06 A
A1820	Undertake TPS System Load Flow / Voltage Regulation Analysis	0d	12-Mar-08	12-Mar-08
A1830	Evaluate Results Of Simulation Modelling and Adjust TPS System Design	11d	12-Mar-08	28-Mar-08
A1840	Refine TPS System Load Flow / Voltage Regulation Analysis	1d	28-Mar-08	31-Mar-08
A1850	Validate Equipment Ratings and Cable and Overhead Conductor Sizes	8d	31-Mar-08	10-Apr-08
A1860	Intitial Preparation TPS System Design Report (TPS3DDI)	3d	07-Feb-07 A	09-Feb-07 A
A1870	Issue Interim TPS Scheme Development Report (TPS 3DDB)	0d		20-Nov-06 A
A1880	Issue Internally TPS System Design Report (TPS 3DDI)	0d		25-Apr-08
A1890	Determine DNO Derived Power Supply Availability and Sizing.	128d	25-Jul-06 A	08-Feb-07 A
A3310	Evaluate and Finalise Substation Locations - DNO Power Supplies Output (TPS 16)	6d	12-Feb-07 A	19-Feb-07 A
A3320	Issue Substation Sites and DNO Requirements Summary Report (TPS 16)	0d		19-Feb-07 A
A3330	Develop Detail Of & Finalise TPS AC/DC Feeding & Sectioning Diagram - Update 1 (TPS 17)	23d	21-Sep-06 A	25-Oct-06 A
A3340	Develop Detail Of and Finalise TPS AC / DC Feeding and Sectioning Diagram - Update 2 (TPS 17)	6d	06-Nov-06 A	13-Nov-06 A
A3350	Issue TPS AC / DC Feeding and Sectioning Diagram (TPS 17)	0d		13-Nov-06 A
A3360	Evaluate Traction Power Equipment and Finalise, Substation Equipt Spec - Update 1 (TPS 18)	20d	19-Oct-06 A	16-Nov-06 A
A3370	Issue Traction Power Equipment and Substation Equipment Specification - Update 2 (TPS18) to tie	0d		21-Dec-06 A
A3440	Develop Detail Of and Finalise Earthing and Bonding Policy (TPS 8DD)	6d	04-Dec-06 A	11-Dec-06 A
A3450	Issue Updated Earthing and Bonding Policy (TPS 8DD)	0d		18-Dec-06 A
A4280	Prepare Final TPS System Design Report (TPS3DDI)	10d	10-Apr-08	25-Apr-08
SDS67310	Issue DC Feeding and Sectioning Diagrams (Iteration 1)	0d		25-Oct-06 A
SDS67320	Issue of Substation Equipment Specification Update 1 (TPS 18)	0d		16-Nov-06 A
VO192 Traction Power Systems Extension to Design Programme (Internal)		26d	12-Mar-08	17-Apr-08
VO21500	Power Quality - Review Traction Loads for Power Quality Changes	3d	12-Mar-08	17-Mar-08
VO22300	Power Quality - Prepare Power Quality Report Update	7d	17-Mar-08	26-Mar-08
VO42900	Protection Settings - Review AC/DC Traction Loads for Protection Settings	4d	26-Mar-08	01-Apr-08
VO43000	Protection Settings - Prepare Protection Settings Report Update	5d	01-Apr-08	08-Apr-08
VO43100	DC Feeding & Sectioning Diagrams - Prepare Update	1d	14-Apr-08	15-Apr-08
VO43700	Cable Schedules - Review Pan Volts, Rail Potentials and Loads for Cable Quantities	1d	16-Apr-08	16-Apr-08
VO45000	Cable Schedules - Prepare Update	1d	17-Apr-08	17-Apr-08
VO45800	Traction Power Equipment - Review Traction Power Equipment Ratings in line with revised load flow	0d	10-Apr-08	10-Apr-08
VO46400	Traction Power Equipment - Prepare Update to Traction Power Equipment Specification	3d	11-Apr-08	16-Apr-08

A13690	Commence Telford Road Bridge Informal Consultation With CEC & tie Over Prior Approval	178d	10-Apr-07 A	14-Jan-08
Technical Approvals		332d	05-Feb-07 A	22-May-08
Roseburn Corridor Retaining Structure Section A Review Period (TAA)		155d	21-May-07 A	21-Dec-07 A
962	Issue Roseburn Corridor RW Section A Design Package to TAA	0d	16-Aug-07 A	
963	TAA Roseburn Corridor RW Section A Design Package Review Period	38d	17-Aug-07 A	12-Oct-07 A
964	Receive Roseburn Corridor RW Section A Design Package comments from TAA	0d	09-Nov-07 A	
965	Incorporate TAA comments into Roseburn Corridor RW Section A Design Package	28d	12-Nov-07 A	21-Dec-07 A
993	Commence Roseburn Corridor RW Section A Informal Consultation With CEC Over Technical Approval	27d	21-May-07 A	29-Jun-07 A
Roseburn Corridor Retaining Structure Section B Review Period (TAA)		156d	18-May-07 A	21-Dec-07 A
1018	Commence Roseburn Corridor RW Section B Informal Consultation With CEC Over Technical Approval	38d	18-May-07 A	13-Jul-07 A
987	Issue Roseburn Corridor RW Section B Design Package to TAA	0d	16-Aug-07 A	
988	TAA Roseburn Corridor RW Section B Design Package Review Period	38d	17-Aug-07 A	12-Oct-07 A
989	Receive Roseburn Corridor RW Section B Design Package comments from TAA	0d	09-Nov-07 A	
990	Incorporate TAA comments into Roseburn Corridor RW Section B Design Package	28d	12-Nov-07 A	21-Dec-07 A
Roseburn Corridor Retaining Structure Section C Review Period (TAA)		156d	18-May-07 A	21-Dec-07 A
1012	Issue Roseburn Corridor RW Section C Design Package to TAA	0d	16-Aug-07 A	
1013	TAA Roseburn Corridor RW Section C Design Package Review Period	38d	17-Aug-07 A	12-Oct-07 A
1014	Receive Roseburn Corridor RW Section C Design Package comments from TAA	0d	09-Nov-07 A	
1015	Incorporate TAA comments into Roseburn Corridor RW Section C Design Package	28d	12-Nov-07 A	21-Dec-07 A
1043	Commence Roseburn Corridor RW Section C Informal Consultation With CEC Over Technical Approval	38d	18-May-07 A	13-Jul-07 A
Roseburn Corridor Retaining Structure Section D Review Period (TAA)		156d	18-May-07 A	21-Dec-07 A
1037	Issue Roseburn Corridor RW Section D Design Package to TAA	0d	16-Aug-07 A	
1038	TAA Roseburn Corridor RW Section D Design Package Review Period	38d	17-Aug-07 A	12-Oct-07 A
1039	Receive Roseburn Corridor RW Section D Design Package comments from TAA	0d	09-Nov-07 A	
1040	Incorporate TAA comments into Roseburn Corridor RW Section D Design Package	28d	12-Nov-07 A	21-Dec-07 A
1068	Commence Roseburn Corridor RW Section D Informal Consultation With CEC Over Technical Approval	29d	18-May-07 A	02-Jul-07 A
Roseburn Corridor Retaining Structure Section E Review Period (TAA)		155d	21-May-07 A	21-Dec-07 A
1062	Issue Roseburn Corridor RW Section E Design Package to TAA	0d	16-Aug-07 A	
1063	TAA Roseburn Corridor RW Section E Design Package Review Period	38d	17-Aug-07 A	12-Oct-07 A
1064	Receive Roseburn Corridor RW Section E Design Package comments from TAA	0d	09-Nov-07 A	
1065	Incorporate TAA comments into Roseburn Corridor RW Section E Design Package	28d	12-Nov-07 A	21-Dec-07 A
1093	Commence Roseburn Corridor RW Section E Informal Consultation With CEC Over Technical Approval	38d	21-May-07 A	16-Jul-07 A
Roseburn Corridor Retaining Structure Section F Review Period (TAA)		156d	18-May-07 A	21-Dec-07 A
1087	Issue Roseburn Corridor RW Section F Design Package to TAA	0d	16-Aug-07 A	
1088	TAA Roseburn Corridor RW Section F Design Package Review Period	38d	17-Aug-07 A	12-Oct-07 A
1089	Receive Roseburn Corridor RW Section F Design Package comments from TAA	0d	09-Nov-07 A	
1090	Incorporate TAA comments into Roseburn Corridor RW Section Fe Design Package	28d	12-Nov-07 A	21-Dec-07 A
1118	Commence Roseburn Corridor RW Section F Informal Consultation With CEC Over Technical Approval	38d	18-May-07 A	13-Jul-07 A
Roseburn Corridor Retaining Structure Section G Review Period (TAA)		154d	22-May-07 A	21-Dec-07 A
1112	Issue Roseburn Corridor RW Section G Design Package to TAA	0d	16-Aug-07 A	
1113	TAA Roseburn Corridor RW Section G Design Package Review Period	38d	17-Aug-07 A	12-Oct-07 A
1114	Receive Roseburn Corridor RW Section G Design Package comments from TAA	0d	09-Nov-07 A	
1115	Incorporate TAA comments into Roseburn Corridor RW Section G Design Package	28d	12-Nov-07 A	21-Dec-07 A
1143	Commence Roseburn Corridor RW Section G Informal Consultation With CEC Over Technical Approval	38d	22-May-07 A	17-Jul-07 A
Roseburn Corridor Retaining Structure Section H Review Period (TAA)		111d	20-Jul-07 A	21-Dec-07 A
1137	Issue Roseburn Corridor RW Section H Design Package to TAA	0d	16-Aug-07 A	
1138	TAA Roseburn Corridor RW Section H Design Package Review Period	38d	17-Aug-07 A	12-Oct-07 A
1139	Receive Roseburn Corridor RW Section H Design Package comments from TAA	0d	09-Nov-07 A	
1140	Incorporate TAA comments into Roseburn Corridor RW Section H Design Package	28d	12-Nov-07 A	21-Dec-07 A
1148	Commence Roseburn Corridor RW Section H Informal Consultation With CEC Over Technical Approval	14d	20-Jul-07 A	09-Aug-07 A
Roseburn Terrace Bridge Review Period (TAA)		152d	24-Apr-07 A	21-Nov-07 A
A10380	Commence Roseburn Terrace Informal Consultation With CEC Over Technical Approval	17d	24-Apr-07 A	18-May-07 A
A8170	Issue Roseburn Terrace Design Package to TAA	0d		02-Jul-07 A
A8180	TAA Roseburn Terrace Design Package Review Period	38d	02-Jul-07 A	24-Aug-07 A
A8190	Receive Roseburn TerraceDesign Package Comments from TAA	0d		06-Nov-07 A
A8200	Incorporate TAA Comments into Roseburn Terrace Design Package	10d	07-Nov-07 A	21-Nov-07 A
Coltbridge Viaduct Structure Review Period (TAA)		91d	30-Jul-07 A	03-Dec-07 A
A12950	Commence Coltbridge Viaduct Informal Consultation With CEC Over Technical Approval	31d	30-Jul-07 A	13-Sep-07 A
A8500	Issue Coltbridge Viaduct Design Package to TAA	0d		13-Sep-07 A

(1) **tie LIMITED** a company registered in Scotland under company number SC230949 whose registered office is at City Chambers, High Street, Edinburgh, Midlothian, EH1 1YJ ("**Client**") and which expression shall includes its successors, permitted assignees and transferees; and

(2) **CONSTRUCCIONES Y AUXILIAR DE FERROCARRILES S.A. (CAF)** a company registered in Spain in the Corporate Register of Guipuzcoa: volume 983, sheet 144, page number SS-329, entry 239 and having its registered office at J.M. Iturrioz 26, 20200 Beasain (Guipuzcoa) – Spain ("**Tram Supplier**") which expression shall include its personal representatives, successors, permitted assignees and transferees;

each a "**Party**" and together the "**Parties**".

WHEREAS

A On 28 November 2005, **tie** published in the Official Journal of the European Union notice of its intention to seek offers for the provision of Trams in respect of the Edinburgh Tram Network and following a procurement contest conducted in accordance with the Public Supply Contracts Regulations 1995 (SI 1995/201), has appointed the Tram Supplier for the provision of such Trams on the terms of this Agreement.

B By virtue of the Tram Legislation, CEC has been granted the requisite authorities and statutory powers to construct, operate and maintain Line One and Line Two.

C On 31 January 2006 **tie** published in the Official Journal of the European Union notice of its intention to seek offers for the provision of infrastructure works (including systems integration services) for Line One and Line Two. Pursuant to a procurement contest to be completed after the Effective Date, **tie** intends to appoint Infraco to provide such services.

D If required by **tie**, **tie** and the Tram Supplier have agreed that this Agreement will be novated by **tie** to Infraco or another party, with the intention that such party shall take over the rights and liabilities of the "Client" under this Agreement and will, thereafter, be responsible to **tie** for the supply of Trams as part of its responsibilities to **tie**. The Tram Supplier agrees to such novation on the terms set out in this Agreement.

E The Trams will be operated by the Operator.

TIE00899939_0009

F This Agreement sets out the terms on which the Client shall procure from the Tram Supplier the design, manufacture, delivery, testing and commissioning of 27 Trams for use on the System with an option to purchase Additional Trams.

G It is acknowledged that this Agreement forms part of a suite of documents which together aim to achieve a project vision (the "**Project Vision**") for the Edinburgh Tram Network. This Project Vision involves the development of a tramway which will stand favourable comparison with the best in Europe. The quality of the tramway provided will be appropriate to Edinburgh's status and role as a European capital city and its city centre's designation as a World Heritage Site. The tramway will integrate as far as possible with other transport modes to serve the existing fabric of the City of Edinburgh, and promote appropriate development and social inclusion. It is intended that this goal be achieved in a spirit of partnership, utilising modern design and construction methods and standards.

NOW IT IS AGREED AS FOLLOWS:

1. DEFINITIONS AND INTERPRETATIONS

1.1 In this Agreement unless the context otherwise requires the following words and expressions shall have the following meanings:

"**Accounts**" means in respect of the Tram Supplier such accounting records as are required to be kept under section 386 of the Companies Act 2006, to be prepared on a consistent basis for each consecutive period not exceeding one month;

"**Additional Insurances**" has the meaning given to it in Clause 40.17;

"**Additional Trams**" means Tram unit(s) which may be ordered by the Client in accordance with Clause 22.1;

"**Additional Trams Order**" has the meaning given to that term in Clause 22.1;

"**Advance Payment Bond**" means the advance payment bond in the form set out in part C of Schedule 10 (*Bonds and Collateral Warranty*);

"**Affected Party**" means a Party that is unable to comply with all or a material part of its obligations under this Agreement as a direct result of a Force Majeure Event;

"**Affiliate**" means in relation to any person, any holding company or subsidiary of that person or any subsidiary of such holding company and "holding company" and "subsidiary" shall have the meanings given to them in sections 1159 and 1160 of the Companies Act 2006;

TIE00899939/0010

"**Aggregate Tram Price**" means the sum of fifty five million seven hundred and eighty one thousand and six hundred and thirty three pounds sterling (£55,781,633), this aggregate contract sum includes 27 trams plus spare parts plus depot equipment;

"**Agreed Commissioning Date**" means in respect of each Tram the date set out in part 1 of Schedule 4 (*Programme*) on which a Certificate of Tram Commissioning is due to be issued in respect of such Tram;

"**Agreed Delivery Date**" means in respect of each Tram the date set out in part 1 of Schedule 4 (*Programme*) on which each Tram is to be delivered to the Depot;

"**Agreement**" means Clauses 1 to 80 (inclusive) together with Schedules 1 to 23 (inclusive) which are annexed and signed as relative hereto, all as may be amended from time to time in accordance with this Agreement;

"**Annual Service Report**" has the meaning given to it in Clause 50.4;

"**Approval Bodies**" means any Relevant Authorities, Utilities, CEC, planning authorities, roads authorities, HMRI, BAA, Network Rail and any other parties who are to issue Consents which may be required for the construction, installation, commissioning, completion, opening maintenance, use or modification of the Edinburgh Tram Network;

"**Assets**" means all assets and rights to enable CEC, TEL, **tie** Limited or another party to own, operate and maintain and extend the Edinburgh Tram Network in accordance with this Agreement, including:

(a) any equipment;

(b) any books and records (including the operating and maintenance manual, health and safety manuals and other know-how) relating specifically to the Tram Supplier's works;

(c) any Trams, Spare Parts, Special Tools and other assets (together with any warranties in respect of assets being transferred); and

(d) any Project IPR or any licence relating to Tram Supplier IPR;

(e) any contractual rights;

(f) any Intellectual Property Rights;

TIE00899939_0011

but excluding any assets and rights in respect of which **tie** is full, legal and beneficial owner;

"**Background Information**" means all and any materials, documents, drawings, plans or other information in paper, electronic or any other form, relating in any way to this Agreement or the Tram Legislation (and the parliamentary process) and made available to the Tram Supplier by **tie**, CEC, any **tie** Party, the Client, any Client Party and/or any of their respective members, officers, agents and/or advisers in connection with this Agreement or during the procurement competition relating to this Agreement or thereafter;

"**Base Case RPIX**" means RPIX as at September 2007;

"**Best Value Improvement Plan**" means the plan referred to in Clause 50.8;

"**Bill**" means a document which constitutes draft primary Legislation;

"**Business Day**" means any day other than a Saturday or Sunday or a day which is a public holiday recognised by CEC;

"**Calibrated Tram Weight**" has the meaning given to it in paragraph 1 of part 2 of Schedule 5 (*Payments*);

"**Case for Safety**" means all necessary documentation, information and other requirements for the issue of a safety certificate or a safety authorisation (as appropriate) by the Office of the Rail Regulator pursuant to the Railways and Other Guided Transport Systems (Safety) Regulations 2006;

"**CDM**" means Construction (Design and Management) Regulations 2007 (SI 2007/320);

"**CEC**" means the City of Edinburgh Council or its statutory successors;

"**Certificate of Tram Commissioning**" means the certificate to be issued by the Tram Inspector in accordance with Clause 31 (*Training, Commissioning, Testing and Certification*) in the form set out in Schedule 12 (*Certificates*);

"**Certificate of Tram Delivery**" means the certificate to be issued by the Tram Inspector in accordance with Clause 30 (*Tram Delivery Tests and Certification*) in the form set out in Schedule 12 (*Certificates*);

"**Change in Control**" means any sale or disposal of any legal, beneficial or equitable interest in share capital comprising 30% of a corporation, or the transfer or acquisition of the ability to direct the management and control of the corporation;

TIE00899939_0012

"**Change in Law**" means the coming into effect after 14 September 2007, of:

(a) Legislation, other than any Legislation which on or before 14 September 2007 has been published:

(i) in a draft Bill as a part of a Scottish Executive/Scottish Parliament or United Kingdom Government consultation paper;

(ii) in a Bill;

(iii) in draft subordinate Legislation within the meaning of section 21(1) of the Interpretation Act 1978; or

(iv) as a proposal in the Official Journal of the European Union or as a common position adopted by the European Parliament; or

(b) any Guidance (other than Guidance which on 14 September 2007, has been published (in draft or otherwise) or changes in Guidance; or

(c) any applicable judgement of a relevant court of law which changes binding precedent;

"**Change Procedure**" means the variation procedure set out in Clause 20 (*Changes*);

"**Client Change**" means any addition, modification, reduction or omission in respect of the Tram Works or any other term of this Agreement instructed by the Client in accordance with Clause 20 (*Changes*);

"**Client Change Order**" means the written confirmation issued by the Client to proceed with a Client Change on the basis of an Estimate (as modified, if required);

"**Client Claim**" means a relief or entitlement pursuant to the Infraco Contract (other than in respect of compensation on termination payment) to which the Client is or becomes or may become entitled under the Infraco Contract which is equivalent to and/or consistent with relief or entitlement pursuant to and under the same circumstances as an EPR Claim;

"**Client Default**" shall have the meaning given to it in Clause 57.1;

"**Client Notice of Change**" means a notice served by the Client pursuant to Clause 20.1 setting out the matters specified in Clause 20.2;

TIE00899939_0013

"**Client Party**" means any advisers appointed by the Client or any of the Client's employees, agents, contractors and Sub-contractors of any tier and its or their directors, officers and employees (excluding the Tram Supplier or any Tram Supplier Party);

"**Client's Programme**" means the programme for the Infraco Works which shall be notified to the Tram Supplier and updated from time to time;

"**Client's Representative**" means the person or persons appointed by the Client from time to time and notified to the Tram Supplier;

"**Code**" means the Scottish Ministers' Code of Practice on the Discharge of Functions by Public Authorities under the Freedom of Information (Scotland) Act 2002 as the same may be amended, varied or replaced from time to time;

"**Code of Construction Practice**" means the code set out in part 1 of Schedule 17 (*Code of Construction Practice and Code of Maintenance Practice*);

"**Code of Maintenance Practice**" means the code set out in part 2 of Schedule 17 (*Code of Construction Practice and Code of Maintenance Practice*);

"**Commencement Conditions Precedent**" shall mean the conditions set out in part 1 of Schedule 1 (*Conditions Precedent*);

"**Commencement Date**" means the date on which the Tram Supplier has been notified by the Client that all of the Commencement Conditions Precedent have been either satisfied, waived or in respect of which the Client has notified the Tram Supplier that they may be treated as Works Conditions Precedent;

"**Commercially Sensitive Information**" means the subset of Confidential Information listed in Schedule 16 (*Commercially Sensitive Information*) comprised of information:

(a) which is provided by the Tram Supplier to the Client in confidence for the period set out in that schedule; and/or

(b) that constitutes a trade secret;

"**Compensation Event**" means the occurrence of any of the following:

(a) on any date on or after the Agreed Delivery Date in respect of the first Tram, of the issue of a Factory Acceptance Type Test Certificate and a Factory Acceptance Routine Test Certificate in respect of a Tram in accordance with Clause 28 (*Pre-*

Delivery Inspections and Factory Acceptance Tests) where the Depot is not ready to accept delivery following the issue of such certificates such that the Tram Supplier cannot despatch the Trams to the Depot; or

(b) of a breach by the Client and/or the Tram Inspector of their respective obligations under this Agreement and/or the Tram Inspector Agreement which has a material adverse effect on the ability of the Tram Supplier to perform its obligations under this Agreement in relation to the achievement of the Tram Delivery Tests, the Tram Commissioning Type Tests, the Tram Commissioning Routine Tests and/or the Training Programme in accordance with the timescales set out in the Tram Manufacturing and Delivery Programme and/or Training Schedule (as appropriate); or

(c) of a breach by the Client of its obligation to give (or procure) access to the Depot in accordance with the provisions of the Depot Sub-Licence which has a material adverse effect on the ability of the Tram Supplier to perform its obligations under this Agreement; or

(d) Protestor Action which exceeds 1 day in duration;

"**Conditions Precedent**" shall mean the Commencement Conditions Precedent and the Works Conditions Precedent;

"**Confidential Information**" means any information which has been designated as confidential by either Party in writing or that ought to be considered as confidential (however it is conveyed or on whatever media it is stored) including information which relates to the business, affairs, properties, assets, trading practices, goods, services, developments, trade secrets, Intellectual Property Rights, know-how, personnel of either Party, all personal data and sensitive personal data within the meaning of the Data Protection Act 1998;

"**Consents**" means without limitation all permissions, consents, approvals, certificates, permits, licences, agreements and authorisations (including those required by Law) needed to carry out the Tram Works and any reference t o "consent" shall mean written consent;

"**Construction Panel**" has the meaning given to it in paragraph 19.1 of Schedule 13 (*Dispute Resolution Procedure*);

"**Control Centre**" means the control centre for the Edinburgh Tram Network to be provided by the Infraco pursuant to the Infraco Contract and operated by the Operator pursuant to the DPOFA;

TIE00899939_0015

"**Defect Notice**" shall have the meaning given to it in Clause 36.2.1.1;

"**Delay**" shall have the meaning given to it in Clause 45.1;

"**Deliverables**" means the designs, Design Data and other deliverables as set out in part 5 of Schedule 4 (*Programme*) to be provided by the Tram Supplier in accordance with the Deliverables Programme;

"**Deliverables Programme**" means the programme set out in part 5 of Schedule 4 (*Programme*);

"**Delivery Acceptance Tests**" means the acceptance tests to be carried out on each Tram as set out in section 23 of the Employer's Requirements;

"**Delivery Retention**" shall have the meaning given to it in Clause 41.21;

"**Delivery Retention Repayment**" shall have the meaning given to it in Clause 41.23;

"**Depot**" means the depot at Gogar comprising maintenance facilities, stabling facilities, sidings, operations, cleaning facilities, the Control Centre, storage facilities and accommodation for operational and maintenance staff;

"**Depot Equipment**" means the equipment which is identified as being supplied by the Tram Supplier in table 83 of section 29 of the Employer's Requirements;

"**Depot Sub-Licence**" means the sub-licence to the Depot in the form annexed to Schedule 3 (*Depot Sub-Licence*);

"**Depot Plan**" means the plan of the Depot annexed to the Depot Sub-Licence;

"**Design Data**" means all drawings, specifications, systems, statements, procedures, proposals, reports, documents, plans, software, formulae, calculations and data relating to the design, construction, testing, commissioning, completion and/or operation of the Trams and/or Tram Works;

"**Design Development Services**" means the production of designs pursuant to Clause 15 (*Design Development*);

"**Developed Kinematic Envelope**" has the meaning given to that term in Railway Safety Publication 2;

TIE00899939_0016

"**Discriminatory Change in Law**" means a Change in Law, the terms of which apply expressly to:

(a) the Edinburgh Tram Network; and/or

(b) the Tram Supplier and not to other persons;

"**Dispute**" means any dispute, difference or unresolved claim between the Parties in connection with or arising from this Agreement;

"**Dispute Resolution Procedure**" means the procedure provided for in Clause 64 (*Dispute Resolution*) and set out in Schedule 13 (*Dispute Resolution Procedure*);

"**DPOFA**" means the development partnering and operating franchise agreement between **tie** and the Operator dated 14 May 2004 as amended at 20 December 2007;

"**Edinburgh Tram Network**" means the tramway which is to be designed, constructed and maintained in Edinburgh pursuant to the Infraco Contract in Phase 1a (forming part of Line One and Line Two as described in the Tram Legislation (and Phase 1b if built) together with all associated works and facilities including all civil engineering and track works, Trams, infrastructure, plant, machinery and equipment installed or used for such tramway;

"**Effective Date**" means the last date of execution of this Agreement;

"**Emergency Services**" means Lothian and Borders Police, Lothian and Borders Fire Brigade, British Transport Police, Scottish Ambulance Services and HM Coastguard;

"**EMC Directive**" means the Electromagnetic Compatibility Directive (2004/108/ECJL390);

"**EPR Claim**" means a relief or entitlement or payment pursuant to this Agreement to which the Tram Supplier is or becomes or may become entitled pursuant to either a:

(a) Compensation Event,

(b) Relief Event;

(c) Force Majeure Event;

(d) Client Change;

(e) Change in Law; or,

(f) any other rights to claim additional payment or relief;

TIE00899939_0017

"**Employer's Requirements**" means the requirements set out in part 1 of Schedule 2 (*Employer's Requirements*);

"**Environmental Information Regulations**" means the Environmental Information (Scotland) Regulations 2004, Scottish SI 2004/520;

"**Escrow Agreement**" means the agreement relating to the Software and/or any Tram Documentation set out in Schedule 8 (*Escrow Agreement*);

"**Escrow Release Event**" has the meaning given to it in the Escrow Agreement;

"**Estimate**" shall have the meaning given to it in Clause 20.2.2;

"**Excess Tram Weight**" has the meaning given to it in paragraph 2 of part 2 of Schedule 5 (*Payments*);

"**Expiry Date**" shall have the meaning given to it in Clause 4.1;

"**Extended Tram Warranty Defects**" means a design defect in relation to an Extended Tram Warranty Part which causes a mechanical or structural failing to that Tram and which:

(a) prevents that Tram operating in accordance with the performance standards set out in the Tram Requirements Specification; and/or

(b) has the effect of shortening the design life of that Tram to a period shorter than 30 years;

"**Extended Tram Warranty Part**" means the bogie frames, axle boxes, gear boxes, slewing rings (or equivalent), traction motors and/or major components of the carshell structure of a Tram;

"**Extended Tram Warranty Period**" means a period of 10 years from the Tram Maintenance Commencement Date;

"**Factory**" has the meaning given to it in Clause 7.4;

"**Factory Acceptance Routine Test Certificate**" means the certificate to be issued by the Tram Inspector in accordance with Clause 28 (*Pre-Delivery Inspections and Factory Acceptance Tests*) in the form set out in Schedule 12 (*Certificates*);

TIE00899939_0018

"**Factory Acceptance Routine Tests**" means the factory acceptance tests and other relevant static inspections and dynamic tests to be carried out on all Trams as set out in section 23.4 of the Employer's Requirements;

"**Factory Acceptance Tests**" means together the Factory Acceptance Routine Tests and the Factory Acceptance Type Tests;

"**Factory Acceptance Type Test Certificate**" means the certificate to be issued by the Tram Inspector in accordance with Clause 28 (*Pre-Delivery Inspections and Factory Acceptance Tests*) in the form set out in Schedule 12 (*Certificates*);

"**Factory Acceptance Type Tests**" means the factory acceptance tests and other relevant static inspections and dynamic tests to be carried out on specified Trams as set out in section 23 of Schedule 2 (*Employer's Requirements*););

"**Final Persistent Breach Notice**" shall have the meaning given to it in Clause 56.2 ;

"**Financial Panel**" has the meaning given to it in paragraph 19.1 of Schedule 13 (*Dispute Resolution Procedure*);

"**Fleet Tram Defect**" means a Tram Defect which:

(a) has occurred during a consecutive period of:

(i) 12 months in respect of any 4 Trams; or

(ii) 18 months in respect of any 6 Trams; and

(b) affects 15% of the component assemblies (interchangeable units) or subassemblies of the same type in respect of those Trams referred to in paragraph (a) above;

"**Fleet Tram Defect Period**" means:

(a) a period from the date on which the first Tram is issued with a Certificate of Tram Commissioning until the date on which the last Tram to be issued with a Certificate of Tram Commissioning is issued with a Certificate of Tram Commissioning; and

(b) once the last Tram to be issued with a Certificate of Tram Commissioning is issued with a Certificate of Tram Commissioning a period until 2 years after the date on which Passenger Services commence;

TIE00899939_0019

"**FOISA**" means the Freedom of Information (Scotland) Act 2002 and any subordinate legislation made under that Act from time to time together with any guidance and/or codes of practice issued by the Scottish Information Commissioner in relation to such legislation;

"**Force Majeure Event**" means the occurrence after the Effective Date of:

(a) war, civil war or armed conflict in the United Kingdom and Spain; or

(b) nuclear, chemical or biological contamination unless the source or cause of the contamination is the result of actions of the Tram Supplier or any Tram Supplier Party; or

(c) pressure waves caused by devices travelling at supersonic speeds; or

(d) exceptionally adverse weather conditions affecting shipment or transportation of Tram;

"**General Change in Law**" means a Change in Law which is not a Qualifying Change in Law;

"**Good Industry Practice**" means using standards, practices, methods and procedures conforming to the Law and exercising that degree of skill, care, diligence, prudence and foresight that would reasonably be expected from a large, reputable, professionally qualified, competent and skilled organisation experienced in carrying out a similar type of undertaking to those comprised in the design, manufacture, supply and maintenance of Trams and seeking in good faith to comply with its contractual obligations and all duties owed by it;

"**Guidance**" means any applicable guidance, policy, direction or determination issued by any regulatory body with which the Client, **tie**, CEC, the Operator, the Tram Supplier and/or the Tram Supplier Parties and/or its Sub-contractors are bound to comply and, to the extent not published or otherwise publicly available is made available to the Tram Supplier and shall include the **tie** and CEC Policies;

"**Hardware Intellectual Property Rights**" means any Intellectual Property Rights which are not Software Intellectual Property Rights and which are the property of the Tram Supplier and/or which the Tram Supplier obtains under the terms of this Agreement;

"**HMRI**" means Her Majesty's Railway Inspectorate;

"**Identified Defect**" shall have the meaning given to it in Clause 36.2.1.1.(a);

TIE00899939_0020

"**Indemnified Liabilities**" means actions, claims (including third party claims) demands, proceedings, losses, damages, liabilities, costs and expenses (including legal and other professional charges and expenses);

"**Indemnified Parties**" shall have the meaning given to it in Clause 41.1;

"**Independent Competent Person**" means Interfleet or such other person appointed by **tie** to agree and oversee the implementation of all procedures and processes to comply with the provisions of the Railway and Other Guide Transport System (Safety) Regulations 2006 and to enable permitting for the testing, commissioning and operation of the Edinburgh Tram Network;

"**Indexed**" means in relation to an amount, that amount to be multiplied by the value of RPIX at the Point of Indexation, divided by the Base Case RPIX to generate a percentage movement;

"**Indirect Loss**" means any damage, cost, third party claim, expense or loss incurred by a Party to this Agreement or Client Party (or an Indemnified Party) as a consequence of a breach of this Agreement or a negligent act or omission which relates to consequential or indirect loss of profits, or loss of revenue, loss of use, loss of production or output, interruption or loss of business or business opportunity or other consequential or indirect loss, loss of contract, loss of goodwill and whether or not the Party committing the breach knew, or ought to have known, that such indirect or consequential loss would be likely to be suffered as a consequence of such breach;

"**Infraco**" means the contractor to be selected and appointed by **tie** which will be responsible for carrying out and/or managing a comprehensive turnkey contract including the design, construction, installation, commissioning, tram procurement, system integration, infrastructure maintenance, tram maintenance, and supply of related equipment and materials, trams and related infrastructure in relation to the Edinburgh Tram Network or any successor appointed by **tie** and notified to the Tram Supplier by notice in writing from time to time;

"**Infraco Contract**" means the contract to be entered into by **tie** with the Infraco;

"**Infraco Party**" means each and any of the Infraco's employees, directors, officers, agents, professional advisors, consultants and contractors and its or their Sub-contractors (of any tier) and shall include its or their directors, officers and employees as they are involved in relation to the Infraco Works and "Infraco Parties" shall be construed accordingly;

TIE00899939_0021

"**Infraco Works**" means as the context requires, all or any of the works to be constructed and completed and/or services to be provided and/or the plant, machinery and equipment to be supplied and installed by the Infraco in accordance with the Infraco Contract and which are necessary to deliver a fully functional tram system in Edinburgh, and to subsequently maintain such system all in accordance with the Employer's Requirements;

"**Insolvency Event**" means any of the following events:

(a) the Tram Supplier is unable to pay its debts as they fall due or is insolvent or admits (in writing) its inability to pay its debts as they fall due;

(b) the Tram Supplier suspends for a period of two months making payments on all or any class of its debts or a moratorium is declared by the Tram Supplier in respect of its indebtedness;

(c) the Tram Supplier ceases business or announces an intention to do so;

(d) the following are entered into:

  (i) a voluntary arrangement (other than a solvent one) for a composition of debts of the Tram Supplier;

  (ii) a scheme of arrangement in respect of the Tram Supplier pursuant to the Insolvency Act 1986 or arrangement in the context of insolvency pursuant to the Companies Act 2006; or

  (iii) a material composition or arrangement other than a solvent one with the Tram Supplier's creditors;

(e) either of the following:

  (i) the winding-up of the Tram Supplier (including passing a shareholders' resolution or the presentation of a petition by the Tram Supplier for the purpose of winding up the Tram Supplier); or

  (ii) its administration (including where an application is made by the Tram Supplier for, or petition is presented by the Tram Supplier for, or any meeting of its directors or members resolves to make an application for, an administration order);

(f) an order for the winding-up or administration of the Tram Supplier is made;

TIE00899939_0022

(g) any liquidator, judicial custodian, receiver, administrative receiver, administrator or the like is appointed in respect of the Tram Supplier or any material part of the Tram Supplier's assets;

(h) possession is taken of, or any distress, execution or other process (other than on the dependence or inhibition) is levied or enforced upon, any material part of the property (whether real or personal) of the Tram Supplier by or on behalf of any creditor or encumbrancer of the Tram Supplier; or

(i) anything analogous to any of the events mentioned in paragraphs (a) to (h) above occurs in relation to the Tram Supplier under the law of any relevant jurisdiction including but not limited to Spanish Law 22/2003 of July 9 and Spanish Law 1564/1989 of December 22;

"**Intellectual Property Rights**" or "**IPR**" means any rights in or to any patent, design right, utility model, trade mark, brand name, service mark, trade name, business name, logo, invention (whether registered or unregistered), domain name, semi-conductor right, topography right, software designs and/or other materials, source code, copyright, moral right, know-how or rights in databases and any other rights in respect of any industrial or intellectual property, whether capable of being registered or not, including all rights to apply for any of the foregoing rights or for an extension, revival or renewal of any of the foregoing rights and any similar or analogous rights to any of the above, whether arising or granted under the law of Scotland or of any other jurisdiction;

"**Interim Certificate**" shall have the meaning ascribed to it in Clause 38.5;

"**Internal Resolution Procedure**" means the procedure described in paragraphs 10 and 11 of Schedule 13 (*Dispute Resolution Procedure*);

"**IPR Claim**" means any claim of infringement or alleged infringement (including to the defence of such infringement or alleged infringement) of any IPR used to design, manufacture, engineer, supply, test, commission, sell, deliver, maintain or operate the Trams or as otherwise provided by the Tram Supplier to the Client in the fulfilment of its obligations under this Agreement;

"**Key Personnel**" means those persons listed in Schedule 6 (*Key Personnel*);

"**Late Tram**" has the meaning ascribed to it in the Tram Maintenance Agreement;

"**Law**" means:

TIE00899939/0023

(a) any Legislation;

(b) any Guidance; and

(c) any judgment of a relevant court of law which is a binding precedent,

in each case in force or applicable in Scotland;

"**Legislation**" means any Act or instruments of the Scottish Parliament or the United Kingdom Parliament or subordinate legislation within the meaning of section 21(1) of the Interpretation Act 1978, any exercise of the Royal Prerogative, and any enforceable community right within the meaning of section 2 of the European Communities Act 1972 and any bye-laws of any Local (or other statutory) Authority;

"**Legal Opinion**" means a legal opinion from a law firm satisfactory to the Client acting reasonably in a form acceptable to the Client acting reasonably;

"**Legal Panel**" has the meaning given to it in paragraph 19.1 of Schedule 13 (*Dispute Resolution Procedure*);

"**Line One**" means the tramway works as authorised by the Edinburgh Tram (Line One) Act 2006;

"**Line Two**" means the tramway works as authorised by the Edinburgh Train (Line Two) Act 2006;

"**Liquidated Damages**" means the liquidated damages payable pursuant to Clause 41 (*Liability, Indemnities, Retention and Liquidated Damages*) (as the context requires);

"**Local Authority**" means CEC or any local authority established pursuant to the Local Government (Scotland) Acts 1973 and 1994 (as these statues may be amended) or their statutory successors or any regional transport partnership or body established pursuant to the Transport (Scotland) Act 2005;

"**Losses**" means all damages, losses, liabilities, costs, expenses (including legal and other professional charges and expenses) and charges whether arising under statute, contract or at common law or in connection with judgments, proceedings, internal costs or demands;

"**Material Change**" means a change that makes a significant difference to the way in which the Tram is operated and/or a significant difference to the environment in which it operates;

TIE00899939_0024

"**Maximum Tram Weight**" means the maximum weight of a tare Tram of 55.85 tonnes;

"**Milestone**" means the output to be achieved before payment of a Milestone Payment set out in the Milestone Payment Schedule;

"**Milestone Payment**" means the payment to be made against the achievement of a Milestone for an amount set out in the Milestone Payment Schedule;

"**Milestone Payment Schedule**" means the schedule of Milestones and Milestone Payments set out at part 1 of Schedule 5 (*Payments*);

"**Mobilisation Cost**" means the agreed fixed cost of mobilising to produce Additional Trams if an Additional Trams Order is placed more than 17 months after the Effective Date, in the sum of 2,886,000 Euros to restart production;

"**Mock Up Production**" means the production of a Tram mock-up in accordance with Clause 23 (*Mock Up*);

"**NCC**" has the meaning given to it in Clause 51.19.3;

"**Net Loss**" or "**Net Gain**" means the net financial loss or the net financial gain, as the case may be, which it is reasonably considered would be suffered or made by the Tram Maintainer (as agreed reasonably by the Parties) as a result of a Client Change required pursuant to Clause 5.2;

"**Notice of Adjudication**" has the meaning given in paragraph 16 of Schedule 13 (*Dispute Resolution Procedure*);

"**Notification**" has the meaning given in paragraph 10.1 of Schedule 13 (*Dispute Resolution Procedure*);

"**Novation Agreement Escrow Letter**" means the escrow letter in substantially the form set out in part 3 of Schedule 1 (*Conditions Precedent*);

"**Object Code**" means any form of computer program which is suitable for direct execution by a machine only and unsuitable to be read and understood by a person;

"**OCIP Insurances**" means the insurances referred to in Clause 40.14, which shall be notified to the Tram Supplier from time to time;

TIE00899939_0025

"**Open Book Basis**" means the availability and disclosure (consistent with operation of Clause 24 (*Audit and Inspection*)) of a reasonable level of data and calculations used by the Tram Supplier to create and justify costings and financial analysis presented to the Client;

"**Operational Panel**" has the meaning given to it in paragraph 19.1 of Schedule 13 (*Dispute Resolution Procedure*);

"**Operations Performance Specification**" means the specification included within Schedule 2 (*Employer's Requirements*);

"**Operator**" means Transdev Edinburgh Tram Limited, a company incorporated in Scotland under registered number SC267598 and having its registered office at Level 1st Floor, City Point, Haymarket Terrace, Edinburgh EH1 2ET, appointed by **tie** as operator under the DPOFA or such successor operator of the Edinburgh Tram Network as may be appointed from time to time;

"**Operator Maintenance**" means the maintenance of the Edinburgh Tram Network to be carried out by the Operator (and its required frequency) shall be as follows:

(a) cleaning of all tramstops, access ways and car parks operated under the auspices of **tie** so as to ensure they are clean and free from all litter, dirt, debris, detritus, industrial and bodily fluids; such cleaning to be carried out not less than daily;

(b) emptying of all litter bins at tramstops or on the Trams daily or as regularly as necessary to prevent them from becoming full;

(c) promptly remove any observed or reported rubbish and debris at the tramstops or on Trams likely to create a risk of fire or other dangers;

(d) regularly remove any observed or reported litter on Trams throughout each day so as to maintain a reasonably clean travelling environment for passengers. This obligation shall also relate to the cleaning up of observed or reported fluids of any type on the Trams; and

(e) cleaning of the parts of the Depot for which the Operator is either the main user or which are shared and this shall include offices, Control Room, messing facilities, Operator locker rooms, car parking at the Depot and Depot entrances, so as to ensure such parts are clean and free from all litter, dirt, debris, detritus, industrial and bodily fluids; such cleaning to be carried out not less than daily or as may be otherwise agreed between **tie** and the Operator;

TIE00899939_0026

and shall also include the carrying out of the initial response to a failure of, damage to or other incident occurring on the System which is not specifically identified as the Operator's responsibility to resolve but actually or, in the Operator's reasonable opinion, potentially interrupts or delays the Transport Services;

"**Operator Maintenance Plan**" means the plan to be prepared by the Operator in relation to the performance of the Operator Maintenance and notified to the Parties from time to time;

"**Paint and Finishes**" means the paintwork, internal and external finishes of each Tram as set out in the Tram Requirements Specification;

"**Paint and Finish Defect**" means any defect in the Paint and Finishes;

"**Paint and Finish Warranty Period**" means a period of six (6) years from the Tram Maintenance Commencement Date;

"**Panels**" has the meaning given to it in paragraph 19 of Schedule 13 (*Dispute Resolution Procedure*);

"**Passenger Services**" means the public passenger Tram services to be provided by the Operator on the Edinburgh Tram Network;

"**Performance Bond**" means the performance bond in the form set out in part D of Schedule 10 (*Bonds and Collateral Warranty*);

"**Permitted Variations**" means a Client Change and/or a change proposed by the Tram Supplier which has been authorised to proceed in accordance with the provisions of this Agreement;

"**Persistent Breach Notice**" shall have the meaning given to it in Clause 56.1;

"**Persistent Failure**" means in respect of the same part or component of a Tram, where a failure or defect (other than a Fleet Tram Defect or normal wear of a wearable part or component) occurs on three or more occasions within any 12 month period and as such is required to be repaired, rebuilt or replaced under Warranty;

"**Phase 1a**" means Edinburgh Airport to Newhaven (inclusive), together with the Depot at Gogar and the spur at Roseburn Junction;

"**Phase 1b**" means Roseburn Junction to Granton Square (inclusive);

TIE00899939_0027

"**Point of Indexation**" shall be January each year to be applied annually as of 1st April each year;

"**Potential Relief Event**" shall have the meaning given to it in Clause 47.1;

"**Potential Relief Event Notice**" shall have the meaning given to it in Clause 47.1;

"**Pre-Operational Consents**" means any necessary approvals consents or authorisations relating to the design construction or performance of the Trams that are required either from HMRI, the Scottish Executive or another Approval Body prior to their operation in public service, such approvals to include but not be limited to those required under The Railways and Other Transport Systems (Approval of Works, Plant and Equipment) Regulations 1994, the Rail Vehicle Accessibility Regulations 1998 (as amended) and the relevant parts of the EMC Directive;

"**Pre-Works Development Services**" means the Design Development Services, the Mock-Up Production and obtaining of all Consents necessary prior to the Works Commencement Date;

"**Primary Tram Warranty Period**" means in respect of each Tram a period of 2 years commencing on the Tram Maintenance Commencement Date;

"**Prohibited Act**" means:

(a) offering, giving or agreeing to give to **tie,** the Scottish Executive, Transport Scotland, the Scottish Ministers, CEC or any **tie** Party or any other public body or any person owned or employed by, any of them any gift or consideration of any kind as an inducement or reward:

    (i) for doing or not doing (or for having done or not having done) any act in relation to the obtaining or performance of this Agreement; or

    (ii) for showing or not showing favour or disfavour to any person in relation to this Agreement;

(b) paying commission or agreeing to pay commission to any person in connection with the award of this Agreement;

(c) committing any offence:

    (i) under the Prevention of Corruption Acts 1889-1916 or in section 68(2) of the Local Government (Scotland) Act 1973;

TIE00899939_0028

(ii) under any Law creating offences in respect of fraudulent acts; or

(iii) at common law in respect of fraudulent acts in relation to this Agreement or any other relevant agreement with **tie**, any **tie** Party, the Scottish Executive, Transport Scotland, the Scottish Ministers, CEC or any other public body; and/or

(d) defrauding or attempting to defraud or conspiring to defraud the Scottish Executive, **tie**, any **tie** Party, CEC, Transport Scotland, the Scottish Ministers or any other public body;

Any references within this Agreement to any "Prohibited Act" shall include acts outwith the United Kingdom and the references within the definition "Prohibited Act" to UK legislation shall be deemed to be amended to refer to legislation in other jurisdictions outside of the United Kingdom;

"**Project**" means the project to procure the construction, operation and maintenance of a two line light rail network in Edinburgh;

"**Project IPR**" means all Intellectual Property Rights created in the performance of the Tram Works relating to aesthetic and ergonomic detailed design and which are specific in nature to the performance of the Tram Works;

"**Project Quality Assurance Programme**" means the quality assurance programme in respect of the manufacture, testing and delivery of the Trams set out in part 4 to Schedule 4 (*Programme*) to this Agreement as the same may be amended from time to time in accordance with this Agreement;

"**Project Safety and Certification Committee**" **or** "**PSCC**" shall include representatives from **tie**, Transport Edinburgh Limited, CEC in its capacity as roads authority, the Infraco, the Operator, the Tram Supplier and the Tram Maintainer;

"**Project Vision**" means the project vision referred to in recital G of this Agreement;

"**Protestor Action**" means any action occurring in Edinburgh or whilst undertaking the delivery of trams within Scotland, directed against **tie** or a **tie** Party or the Edinburgh Tram Network which materially affects the performance of the Tram Supplier's obligations under this Agreement and has not arisen as a result of or been caused by the Tram Supplier's breach of its obligations under this Agreement or otherwise by any action or omission of the Tram Supplier unrelated to the Edinburgh Tram Network;

TIE00899939_0029

"**Qualifying Change in Law**" means

(a) a Discriminatory Change in Law; and/or

(b) a Specific Change in Law;

"**Railway Safety Publication 2**" means the railway safety publication paper providing guidance on trams and published by the Office of Rail Regulation in 2006 as may be amended from time to time;

"**Rectification Period**" shall have the meaning given to it in Clause 36.2.2.3;

"**Rectification Plan**" shall have the meaning given to it in Clause 36.2.2.3;

"**Referral**" has the meaning given in paragraph 27 of Schedule 13 (*Dispute Resolution Procedure*);

"**Referring Party**" has the meaning given in paragraph 16 of Schedule 13 (*Dispute Resolution Procedure*);

"**Related Contracts**" has the meaning given to it in paragraph 55 of Schedule 13 (*Dispute Resolution Procedure*);

"**Related Dispute**" has the meaning given in paragraph 55 of Schedule 13 (*Dispute Resolution Procedure*);

"**Relevant Authority**" means any court with the relevant jurisdiction and any local, national or supra-national agency, inspectorate, minister, ministry, official or public or statutory person of the government of the United Kingdom or of the European Union;

"**Reliability**" means in respect of a Tram that it has operated for two consecutive Reporting Periods in passenger carrying service without being a Tram Maintainer Late Tram and that during the same two Reporting Periods it has travelled a distance in excess of 10,000 kilometres;

"**Reliability Bond**" means the bond to be provided on behalf of the Tram Supplier by a bond provider of standing acceptable to the Client (acting reasonably) in a form substantially similar to that set out in Schedule 10 (*Bonds and Collateral Warranty*);

"**Relief Event**" means one or more of the following events:

(a) fire, explosion, lightning, storm, tempest, flood, ionising radiation (to the extent it

TIE00899939_0030

does not constitute a Force Majeure Event), earthquakes, riot and civil commotion; or

(b) any:

(i) official or unofficial strike; or

(ii) lockout; or

(iii) go-slow; or

(iv) other industrial dispute generally affecting the tram and/or tram manufacturing industry or a significant sector of it; or

(v) failure of the Operator to make available drivers or other relevant staff as necessary;

save where such events relate to the Tram Supplier's workforce or the workforce of any Sub-contractor to the Tram Supplier, in which case they shall not qualify as a Relief Event; or

(c) any breach by the Client of its obligations under this Agreement which has an adverse effect (provided that it is not de-minimis) on the ability of the Tram Supplier to perform its obligations under this Agreement, or

(d) an act of terrorism; or,

(e) the occurrence of a Force Majeure Event

"**Repeated Failure Notice**" shall have the meaning given to it in Clause 32.1;

"**Repeated Failure Remedy Plan**" shall have the meaning given to it in Clause 32.2;

"**Reporting Period**" has the meaning ascribed to it in the Tram Maintenance Agreement;

"**Reporting Period End Date**" means the dates set out in Schedule 21 (*Reporting Period End Dates*);

"**Representatives**" means the Client's Representative and the Tram Supplier's Representative;

"**Request for Information**" shall have the meaning set out in FOISA and shall include any apparent request for information under FOISA, the Environmental Information Regulations or the Code;

TIE00899939_0031

"**Required Insurances**" means the insurances complying with the insurance requirements set out in part 1 of Schedule 11 (*Required Insurances*);

"**Required Standards**" means:

(a) it has received all such Pre-Operational Consents as are required for use in Passenger Services; and

(b) it has been so designed, built, manufactured, installed, calibrated, adapted and commissioned and otherwise engineered as to be compatible with all relevant operational interfaces (as those interfaces may from time to time be notified to the Tram Supplier);

(c) and so as to ensure that the Tram Requirements Specification is complied with;

"**Responding Party**" has the meaning given in paragraph 17 of Schedule 13 (Dispute Resolution Procedure);

"**Routine Tests**" means any of the: Site Commissioning Routine Tests, System Integration Routine Tests, Tram Commissioning Routine Tests, or the Factory Acceptance Routine Tests;

"**RPIX**" means the general index of retail prices for all items excluding mortgage interest payments (Office of National Statistics: Series Identifier: CHMK) as published or any replacement thereof or, in the event such index ceases to exist, such other similar index as the Parties shall agree from time to time (or, if the Parties cannot so agree, as determined under the Dispute Resolution Procedure on the referral of either Party) provided that, if the basis of computation of such index shall have changed between the two relevant months, any official reconciliation between the two bases of computation published by a United Kingdom government department shall be binding on the Parties and, in the absence of such official reconciliation, such adjustment shall be made to the figure of such index for the second of those months to make it correspond as nearly as possible to the method of computation for the first of those months and such adjusted figure shall be considered for the purpose of this Agreement to the exclusion of the actual published figure;

"**SDS Provider**" means Parsons Brinckerhoff Limited, a company registered in England and Wales with registered number 02554514 whose registered office is at Amber Court, William Armstrong Drive, Newcastle Business Park, Newcastle upon Tyne, NE4 7YQ which expression shall include its permitted assignees or such other system design services provider appointed by **tie** or the Client and notified to the Tram Supplier by notice in writing from time to time in relation to the Edinburgh Tram Network;

TIE00899939_0032

"**Security Interests**" means any mortgage, pledge, lien, hypothecation, security interest or other charge or encumbrance or any other agreement or arrangement having substantially the same economic effect and includes any security as defined in section 248(b) of the Insolvency Act 1986;

"**Service Commencement Date**" means the first date of commencement of Passenger Services;

"**Site Commissioning Routine Tests**" means the commissioning acceptance tests to be carried out on the System on each Tram as set out in section 23 of Schedule 2 (*Employer's Requirements*);

"**Site Commissioning Tests**" means together the Site Commissioning Routine Tests and the Site Commissioning Type Tests;

"**Site Commissioning Type Tests**" means the commissioning acceptance tests to be carried out on the System on a specified number of Trams as set out in section 23 of the Employer's Requirements;

"**Software**" means the executable object code version of software relating to equipment installed on the Trams, which is supplied in machine readable form and already loaded upon the relevant piece of equipment or computer system to which it relates, including for the avoidance of doubt all Software embedded in a hardware device which is installed on the Trams;

"**Software Intellectual Property Rights**" means any Intellectual Property Right which exists in the Software (including the Source Code);

"**Source Code**" means the source code version of Software, which is supplied in a form capable of being read and interpreted by humans, together with related interpretive information;

"**Spare Parts**" means such components, parts, consumables, equipment and furnishings as may reasonably be required from time to time to maintain, repair or replace any part of any Tram or to keep it compliant with Required Standards and Law for the duration of its operational life;

"**Spare Parts Period**" means a period of 30 years from the Tram Maintenance Commencement Date;

"**Special Tools**" means the special tools required to carry out maintenance of the Trams, listed in part 5 of Schedule 2 (*Employer's Requirements*) as the same may be varied from time to time by written agreement of the parties (such agreement not to be unreasonably withheld or delayed);

"**Specific Change in Law**" means any Change in Law which specifically applies to the provision of works the same as or similar to the Tram Works (but not to the provision of other works);

"**Sub-Contractor**" means any sub-contractor, sub-consultant, supplier, specialist and/or other party appointed in accordance with Clause 69 (*Assignation, Changes in Legal Status, Changes in Control and Sub-Contracting*) or otherwise approved by the Client, and Sub-Contract is to be interpreted accordingly;

"**Sub-Contractor Direct Agreement**" means an agreement in a form substantially similar to that set out in Schedule 18 (*Sub-Contractor Direct Agreement*);

"**System**" the tram system to be constructed in accordance with the Tram Legislation made in respect of the Edinburgh Tram Network together with associated works and facilities and including all civil engineering and track works, tram infrastructure, plant, machinery and equipment installed or used for such tram system;

"**Systems Acceptance Tests**" means the acceptance tests to be carried out on the System as set out in section 23 of the Employer's Requirements;

"**System Availability Targets**" means the targets set out in section 15 of the Employer's Requirements;

"**System Design Services Agreement**" (or "**SDS Agreement**") means the agreement dated 19 September 2005 made between **tie** and the SDS Provider relating to the provision of system design services in relation to the Project;

"**System Integration Routine Tests**" means the commissioning acceptance tests to be carried out on the System on each Tram as set out in section 23 of the Employer's Requirements;

"**System Integration Tests**" means together the System Integration Routine Tests and the System Integration Type Tests;

TIE00899939_0034

"**System Integration Type Tests**" means the commissioning acceptance tests to be carried out on the System on a specified number of Trams as set out in section 23 of the Employer's Requirements;

"**Tax**" means any kind of tax (including for the avoidance of doubt insurance premium tax), duty, levy, imposition, assessment or other charge (other than VAT) whether or not similar to any in force at the date of this Agreement and whether imposed by a local, governmental or other Relevant Authority in the United Kingdom or elsewhere;

"**Term**" means the period from (and including) the Effective Date until (and including) the earlier of the Expiry Date or the date of termination of this Agreement;

"**Termination Date**" means any date of early termination of this Agreement in accordance with its terms;

"**Technical Library**" has the meaning given to it in Clause 51.20.1;

"**Test Certificates**" means the certificates set out in parts 1 to 7 of Schedule 12 (*Certificates*);

"**Testing Failure**" means a failure to meet the requirements of any of the Tram Tests;

"**Test Plan**" means the plan for testing and commissioning of the Trams to be agreed with the Client in accordance with in section 23 of the Employer's Requirements;

"**Test Specifications**" means the specifications for testing and commissioning of the Trams as set out in section 23 of the Employer's Requirements and as varied from time to time in accordance with this Agreement;

"**Test Track**" means the track to be built by Infraco for the initial purposes of the testing and commissioning of the Trams;

"**Third Party Software**" means programmes, the Intellectual Property Rights in which are owned by a third party and used by the Tram Supplier to perform its obligations under this Agreement;

"**Third Party Software Licence**" means a licence to use the Third Party Software;

"**tie**" means **tie** limited, a company registered in Scotland under company number SC230949 and having its registered office at City Chambers, High Street, Edinburgh, EH1 1YJ, Midlothian, which shall include its successors in title, permitted assignees and transferees;

TIE00899939_0035

"**tie and CEC Policies**" means the policies included in Schedule 20 (**tie** *and CEC Policies*);

"**tie Customer Satisfaction Survey**" has the meaning given to it in Clause 50.3;

"**tie's Drug and Alcohol Policy**" means the policy set out in Schedule 20 (**tie** *and CEC Policies)*;

"**tie Party**" means any advisers appointed by **tie** and/or any of **tie's**, agents, employees, contractors and Sub-contractors of any tier and its or their directors, officers, employees (but excluding the Infraco, any Infraco Party, the Tram Supplier and any Tram Supplier Party) and "**tie Parties**" shall be construed accordingly;

"**tie's** Representative" means the person or persons appointed by **tie** from time to time and notified to the Tram Supplier;

"**Timetable**" means the timetable which is developed by the Operator under the terms of the DPOFA Agreement and section 2 of the Tram Employer's Requirements, as may be notified to the Tram Supplier by the Client from time to time;

"**Training Programme**" means the training programme for the training of Operator's driver instructors and the Tram maintenance staff set out at part 3 to Schedule 2 (*Programme*);

"**Training Schedule**" means part 3 of Schedule 2 (*Employer's Requirements*);

"**Tram**" means any electric tram unit to be designed, manufactured, engineered, fitted out, equipped, installed and delivered by the Tram Supplier in accordance with the terms of this Agreement including for the avoidance of doubt, Additional Trams;

"**Tram Commissioning Certificate**" means a certificate issued in accordance with Clause 7.2.1.10;

"**Tram Commissioning Requirements**" shall have the meaning given to it in Clause 31.8;

"**Tram Commissioning Routine Tests**" means together the Site Commissioning Routine Tests and the System Integration Routine Tests;

"**Tram Commissioning Tests**" means together the Tram Commissioning Routine Tests and the Tram Commissioning Type Tests;

"**Tram Commissioning Type Tests**" shall have the meaning given to it in Clause 31.9;

TIE00899939_0036

"**Tram Commissioning Type Test Certificate**" means the certificate issued in accordance with Clause 31.9;

"**Tram Defect**" means in respect of any Tram supplied by the Tram Supplier under this Agreement that it:

(a) does not comply with the Tram Employer's Requirements;

(b) does not satisfy the Required Standards as at the date of the issue of the Tram Commissioning Type Test Certificate; or

(c) is not otherwise in accordance with any other provision of this Agreement;

"**Tram Delivery Requirements**" shall have the meaning given to it in Clause 30.2;

"**Tram Delivery Tests**" means the tests to be conducted on the Trams on arrival at the Depot, in accordance with Clause 30 (*Tram Delivery Tests and Certification*) and in section 23 of the Employer's Requirements;

"**Tram Documentation**" means the documentation, specifications, instructions, catalogues, spare parts list, training and maintenance manuals and log books and Software listed in part 2 of Schedule 4 (*Programme*);

"**Tram Documentation Delivery Programme**" means the delivery and approval programme in respect of the Tram Documentation set out in part 2 of Schedule 4 (*Programme*);

"**Tram Employer's Requirements**" means the subset of the Employer's Requirements listed in part 1 of Schedule 2 (*Employer's Requirements*) as relating to the Tram Maintainer and Tram Supplier;

"**Tram Inspector**" means the person specified as such in the Tram Inspector Agreement or such other person as the Client may notify the Tram Supplier in writing from time to time;

"**Tram Inspector Agreement**" means an agreement between the Tram Inspector, **tie**, and the Infraco for the inspection and certification of Trams dated on or about the date of this Agreement;

"**Tram Interface Specification**" means paragraph 1.2.5 of Schedule 23 (*Tram Supplier's Proposal*);

TIE00899939_003

"**Tram Legislation**" means the Edinburgh Tram (Line One) Act 2006 and the Edinburgh Tram (Line Two) Act 2006 which received Royal Assent on 8 May 2006 and 27 April 2006 respectively and which confer on CEC all requisite authorities and statutory powers to procure construction, operation and maintenance of the Edinburgh Tram Network;

"**Tram Maintainer**" means the party appointed to carry out the Tram Maintenance Services in accordance with the Tram Maintenance Agreement or such other person as may enter into a contract with the Client on similar terms from time to time;

"**Tram Maintainer Late Tram**" shall have the meaning set out in the Tram Maintenance Agreement;

"**Tram Maintenance Agreement**" means the maintenance agreement to be entered into on or about the date of this Agreement between the Tram Maintainer and **tie** for the ongoing maintenance of the Trams which is to be novated to the Infraco;

"**Tram Maintenance Commencement Date**" means the date on which the maintenance obligations commence under the Tram Maintenance Agreement;

"**Tram Maintenance Plan**" means the plan prepared by the Tram Supplier in respect of the maintenance of the Trams as updated from time to time;

"**Tram Maintenance Services**" means the ongoing maintenance of the Trams, supply of consumable spares for the Trams, the provision of any associated services and other obligations incumbent on the Tram Maintainer as described in the Tram Maintenance Agreement;

"**Tram Maintenance Specification**" means the specification for the maintenance services to be provided by the Tram Maintainer as set out in part 40 of the Tram Employer's Requirements;

"**Tram Manufacturing and Delivery Programme**" means the programme for the design, manufacture, delivery, testing and commissioning of the Trams set out in part 1 of Schedule 4 (*Programme*) as the same may be amended from time to time in accordance with the terms of this Agreement;

"**Tram Price**" means the price of a Tram being an amount of one million nine hundred and fifty seven thousand and forty one pounds sterling (£1,957,041);

TIE00899939_0038

"**Tram Rejection Notice**" means a tram rejection notice in the form set out in part 5 of Schedule 12 (*Certificates*);

"**Tram Related Equipment**" means the Tram Documentation, Spare Parts and Special Tools;

"**Tram Requirements Specification**" means the specification for the Trams set out in the Tram Employer's Requirements;

"**Tram Supplier Certificates of Insurance**" means the certificates of insurance of the Tram Supplier in relation to the Required Insurances set out in part 2 of Schedule 11 (*Required Insurances*);

"**Tram Supplier Default**" shall have the meaning given to it in Clause 55.1;

"**Tram Supplier IPR**" means:

(a) all Intellectual Property Rights (including Intellectual Property Rights in relation to the Tram Supplier Software) which the Tram Supplier can demonstrate by documentary evidence were already existing and owned by, or licensed to, the Tram Supplier prior to the Effective Date including, without limitation, any asset management system and/or works programming system operated by the Tram Supplier which is not comprised within the Project IPR; and

(b) any modifications or developments of any of the Intellectual Property Rights referred to in paragraph (a) above which are generic in nature;

"**Tram Supplier Party**" means any contractors, agents, sub-contractors, professional advisors or consultants engaged by the Tram Supplier to perform, facilitate or assist with the performance of any of the Tram Works and any of its or their sub-contractors of any tier and its or their directors, officers, employees and workmen in relation to the Project and "**Tram Supplier Parties**" shall be construed accordingly;

"**Tram Supplier's Proposals**" means the proposals set out in Schedule 23 (Tram Supplier's Proposals) and which in addition shall include all features on the Tram mock-up produced and approved pursuant to Clause 23 (*Mock-Up*);

"**Tram Supplier's Representative**" means the Tram Supplier's Project Manager or such other person as may from time to time be notified in writing by the Tram Supplier to the Client;

"**Tram Supplier Safety Management System**" has the meaning given to it in Clause 10.8.1.2;

TIE00899939_0039

"**Tram Supplier Software**" means programs, the Intellectual Property Rights in which are:

(a) owned by the Tram Supplier; and

(b) used by the Tram Supplier to carry out its obligations under this Agreement;

"**Tram Supply Advance Works Agreement**" means the agreement entered into between **tie** and the Tram Supplier on 18th December 2007;

"**Tram Supply Collateral Warranty**" means a collateral warranty between **tie** and the Tram Supplier substantially in the form set out in part 3 of Schedule 1 (*Conditions Precedent*);

"**Tram Supply Novation Agreement**" means a novation agreement between a New Party, **tie** and the Tram Supplier substantially in the form set out in part 2 of Schedule 1 (*Conditions Precedent*);

"**Tram Supply Period**" means the period from the Effective Date until the expiry of the last Extended Tram Warranty Period;

"**Tram Tests**" means any of the Factory Acceptance Tests, Delivery Acceptance Tests, Site Commissioning Tests and System Integration Tests;

"**Tram Works**" means the Tram Supplier's obligations pursuant to this Agreement including the Pre Works Development Services and the supply of the Depot Equipment;

"**Transport Edinburgh Limited**" or "**TEL**" means Transport Edinburgh Limited a company incorporated under the Companies Act with registered number SC269639 and having its registered office at 55 Annandale Street, Edinburgh, EH7 4AZ;

"**Transport Scotland**" means an agency within the Scottish Executive Enterprise, Transport and Lifelong Learning Department which was established in January 2006 and having its principal office at Buchanan House, 58 Port Dundas Road, Glasgow, H4 0HF;

"**Transport Services**" means the public passenger transport services to be provided by the Operator on the Edinburgh Tram Network (or any part thereof) set out in the Operations and Performance Specification;

"**Type Test**" means any of the Factory Acceptance Type Test, Site Commissioning Type Test, System Integration Type Test, and Tram Commissioning Type Test;

TIE00899939_0040

"**Utilities**" means BT, Easynet, NTL, Scottish Water, Scottish Gas Networks, Thus and their successors, permitted assignees and transferees and "Utility" shall be construed accordingly;

"**VAT**" means Value Added Tax;

"**Warranty**" shall have the meaning given to it in Clause 36.1;

"**Warranty Period**" means the Primary Tram Warranty Period, Paint and Finish Warranty Period, Fleet Defect Warranty Period and/or Extended Tram Warranty Period;

"**Works Commencement Date**" means the date on which the Tram Supplier has been notified by the Client that all of the Commencement Conditions Precedent and Works Conditions Precedent (if any) have been satisfied or waived; and

"**Works Conditions Precedent**" shall mean any Commencement Conditions Precedent that the Client has notified the Tram Supplier may be treated as Works Conditions Precedent.

1.2 In this Agreement, except where the context otherwise requires:

1.2.1 words importing gender include masculine, feminine and neuter;

1.2.2 the singular includes the plural and vice versa;

1.2.3 a reference to any part, Clause, sub-Clause, Schedule or appendix is, except where it is expressly stated to the contrary, a reference to such part, Clause or sub-Clause of or Schedule or appendix to this Agreement;

1.2.4 a reference in any Schedule or appendix to any part, paragraph or sub- paragraph is, except where it is expressly stated to the contrary, a reference to such part, paragraph or sub-paragraph of that Schedule or appendix (as the case may be);

1.2.5 any reference to this Agreement or to any other document shall include any variation, amendment, or supplement to this Agreement or such other document expressly permitted under the terms of this Agreement;

1.2.6 any reference to any enactment, draft enactment, order, regulation or other similar instrument (including any EU instrument) (whether specifically named or not) shall be construed as a reference to the enactment, order, regulation or instrument as amended, replaced, consolidated or re-enacted and shall include any orders, regulations, legally binding codes of practice or subordinate legislation (within the meaning of section 21(1) of the Interpretation Act 1978) made thereunder;

TIE00899939_0041

1.2.7 references to any items being "in the agreed form" means such items have been initialled by or on behalf of each of the Parties for the purpose of identification;

1.2.8 a reference to a person includes individuals, firms, partnerships, bodies corporate, joint ventures, government departments and any organisation capable of suing or being sued and references to any of the same include the others and their successors and assignees and transferees;

1.2.9 headings and the contents list are for convenience of reference only and do not affect the interpretation of this Agreement;

1.2.10 the ejusdem generis rule does not apply and the meaning of general words is not to be restricted by any particular examples preceding or following those general words;

1.2.11 a reference to a time of day is a reference to the time in Edinburgh;

1.2.12 subject to the restrictions imposed by this Agreement on sub-contracting, an obligation to do something includes an obligation to procure it to be done;

1.2.13 an obligation not to do something includes an obligation not to wilfully allow it to be done; and

1.2.14 the word "including" means "including without limitation".

1.3 This Agreement shall be interpreted and construed as a whole provided that in the event of any inconsistency or conflict between the main body of this Agreement and/or the Schedules and/or the appendices, then:

1.3.1 the main body shall prevail to the extent of any such conflict or inconsistency over the Schedules and appendices; and

1.3.2 the Schedules shall prevail to the extent of any such conflict or inconsistency between the Schedules and appendices.

2. CONDITIONS PRECEDENT

2.1 The Client may by notice in writing to the Tram Supplier waive satisfaction of any or all of the Conditions Precedent.

2.2 The Client may by notice in writing to the Tram Supplier confirm that any of the Commencement Conditions Precedent can be treated as Works Conditions Precedent.

TIE00899939_0042

2.3 On the date that each of the Commencement Conditions Precedent (with the exception of any Commencement Conditions Precedent that have been expressly waived by the Client in writing) have in the Client's opinion (acting reasonably) been satisfied, the Client shall notify the Tram Supplier of the same.

2.4 On the date that each of the Works Conditions Precedent (if any) (with the exception of any Works Conditions Precedent that have been expressly waived by the Client in writing) have in the Client's opinion (acting reasonably) been satisfied, the Client shall notify the Tram Supplier of the same.

2.5 The Tram Supplier shall use its reasonable endeavours to satisfy or procure the satisfaction of the Conditions Precedent as soon as reasonably possible after the Effective Date.

3. EFFECTIVE DATE, COMMENCEMENT DATE AND WORKS COMMENCEMENT DATE

3.1 With the exception of:

3.1.1 the provisions of Clauses 1 (*Definitions and Interpretation*), 2 (*Conditions Precedent*), 3 (*Effective Date, Commencement Date and Works Commencement Date*), 4 (*Term of this Agreement*), 40 (*Required Insurances*), 41 (*Liability, Indemnities, Retention and Liquidated Damages*), 51 (*Copyright and Intellectual Property*), 52 (*Confidential Information*), 64 (*Dispute Resolution*), 65 (*Derogations*), 66 (*Variations to be in Writing*), 67 (*Waiver and Cumulative Remedies*), 68 (*Notices*), 69 (*Assignation, Changes in Legal Status, Changes in Control and Sub-Contracting*), 70 (*Conflict of Interest*), 71 (*Security Interests*), 72 (*Data Protection*), 73 (*Entire Agreement*), 74 (*Consent and Approval*), 75 (*Discrimination*), 76 (*Further Assurance*), 77 (*Applicable Law*), 78 (*No Partnership or Agency*), 79 (*Invalid Terms*) and 80 (*Third Party Rights*) of this Agreement, which shall take effect on the Effective Date; and

3.1.2 the provisions of Clauses 7 (*General Obligations*) (but in respect of the Pre- Works Development Services only), Clause 11 (*General Warranties*), 12 (*Consents*) (with the exception of Clause 12.7 which shall already have taken effect), 13 (*Client's Representative*), 14 (*Tram Supplier's Representative*), 15 (*Design Development*), 18 (*Personnel*), 19 (*Approvals and Consents*), 20 (*Changes*), 23 (*Mock Up*), 24 (*Audit and Inspection*), 25 (*Quality Assurance*), 38 (*Price and Payment*), 39 (*VAT*), 43 (*Mitigation*), 45 (*Tram Supplier Delays*), 55 (*Tram Supplier Default Termination*) to 63 (*Effect of Termination or Expiry*) of this Agreement, which shall take effect on the Commencement Date,

TIE00899939_0043

the obligations of the parties under this Agreement shall be conditional upon the occurrence of the Works Commencement Date.

3.2 This Agreement shall terminate automatically on a date 12 months after the Effective Date or, if later, 6 months after the execution of the Infraco Contract (or on such later date as may be agreed in writing between the Parties) if the Commencement Date has not arisen on or before such date, in which event:

3.2.1 all provisions of this Agreement (other than the provisions of Clauses 1 (*Definitions and Interpretation*), 2 (*Conditions Precedent*), 3 (*Effective Date, Commencement Date and Works Commencement Date*), 4 (*Term of the Agreement*), 41 (*Liability, Indemnities, Retention and Liquidated Damages*), 51 (*Copyright and Intellectual Property*), 52 (*Confidential Information*), 64 (*Dispute Resolution*), 66 (*Variations to be in Writing*), 68 (*Notices*), 73 (*Entire Agreement*), 77 (*Applicable Law*), 78 (*No Partnership or Agency*), 79 (*Invalid Terms*), 80 (*Third Party Rights*)) shall cease to have effect; and

3.2.2 such termination shall be without prejudice to any accrued rights or obligations as at that date.

4. TERM OF THE AGREEMENT

4.1 Subject to Clause 3 (*Effective Date, Commencement Date and Works Commencement Date*) and 4.2, this Agreement shall commence on the Effective Date and shall continue unless terminated earlier in accordance with its terms, until the expiry of the Tram Supply Period ("**Expiry Date**").

4.2 Unless terminated earlier in accordance with its terms, this Agreement shall continue in full force and effect until the expiry of a period of 30 years from the Tram Maintenance Commencement Date only in respect of the rights and obligations of the Tram Supplier and the Client pursuant to Clauses 34.3, 34.4 and 34.6 and all other provisions of this Agreement necessary to give effect to such Clauses.

4.3 Clause 62.1 shall not apply on the expiry of the Tram Supply Period or the Spare Parts Period.

5. NOVATION

5.1 Unless waived by the Client in accordance with Clause 2.1, it is one of the conditions precedent to the occurrence of the Works Commencement Date that the Tram Supplier shall, if required by **tie**, enter into and execute:

TIE00899939_0044

5.1.1 a Tram Supply Novation Agreement in the form set out in part 3 of Schedule 1 (*Conditions Precedent*);

5.1.2 a Tram Supply Collateral Warranty in the form set out in part 3 of Schedule 1 (*Conditions Precedent)*; and

5.1.3 a Novation Agreement Escrow Letter in the form set out in part 3 of Schedule 1 (*Conditions Precedent)*;

5.2 Subject to Clause 5.3, prior to the Tram Supply Novation Agreement coming into effect pursuant to the terms of the Novation Agreement Escrow Letter, the provisions of this Agreement and any associated documentation are subject to any amendment reasonably required by **tie** upon obtaining the Tram Supplier's written agreement, such agreement not to be unreasonably withheld, to reflect the terms of any agreement reached by **tie** with any new party to this Agreement

5.3 Any amendment to this Agreement required pursuant to Clause 5.2 shall be made on a No Net Gain No Net Loss Basis.

6. COMMENCEMENT OF TRAM WORKS

6.1 The Tram Supplier shall on the Works Commencement Date immediately commence manufacturing and supplying the Trams in accordance with the terms of this Agreement.

7. GENERAL OBLIGATIONS

7.1 Notwithstanding the specific responsibilities set out in Clause 7.2, the Tram Supplier warrants to the Client that in carrying out and completing the Tram Works it has exercised and shall continue to exercise a reasonable level of professional skill, care and diligence to be expected of a properly qualified and competent professional contractor experienced in carrying out works and services of a similar nature to the Tram Works in connection with projects of a similar scope and complexity. The Tram Supplier acknowledges that the Client will rely upon the skill, care and diligence of the Tram Supplier in connection with all matters for which the Tram Supplier is responsible under this Agreement.

7.2 The Tram Supplier shall:

7.2.1 carry out the Tram Works and design, manufacture, engineer, supply, test, commission, deliver and provide 27 Trams, Depot Equipment and, if required, any Additional Trams, and otherwise perform its obligations under this Agreement:

TIE00899939_0045

7.2.1.1 so as to ensure compliance with the Tram Employer's Requirements;

7.2.1.2 so as to ensure compliance with the Tram Supplier's Proposals;

7.2.1.3 in accordance with part 1 of Schedule 4 (*Programme*);

7.2.1.4 in accordance with the Project Quality Assurance Programme;

7.2.1.5 so as to ensure that all parts, components, systems, devices, equipment, software and mechanisms incorporated in the Trams are fit for purpose to comply with the Tram Employer's Requirements, compatible and interoperable with each other;

7.2.1.6 using Good Industry Practice;

7.2.1.7 in compliance with all applicable Laws and Consents;

7.2.1.8 in a manner which does not infringe the Intellectual Property Rights of any third party;

7.2.1.9 in a manner which does not infringe the instructions issued to it by the Client or its authorised representatives or assignees (provided that the identity of such persons is notified to the Tram Supplier in advance in writing) and/or the Tram Inspector in accordance with the terms of this Agreement;

7.2.1.10 so as to ensure that in relation to each Tram, that it meets the Required Standards and each Tram shall (without prejudice to the Client's other rights and remedies under this Agreement) be deemed to have achieved the Required Standards upon receipt of a certificate ("**Tram Commissioning Certificate**"); and

7.2.1.11 so as to ensure that it obtains all Pre-Operational Consents;

7.2.1.12 in accordance with the Code of Construction Practice, so far as it is applicable;

7.2.1.13 in accordance with the Code of Maintenance Practice, so far as it is applicable;

7.2.1.14 in accordance with relevant environmental regulations and requirements in Scotland; and

TIE00899939_0046

7.2.1.15 in accordance with **tie** and CEC Policies;

7.2.1.16 so as to ensure compliance with the Tram Legislation;

7.2.1.17 so as to assist **tie** in relation to providing information that best value (pursuant to the Local Government (Scotland) Act 1973 as amended by the Local Government in Scotland Act 2003) has been secured in respect of the carrying out of the Tram Works;

7.2.1.18 in such manner as not wilfully to detract from the image and reputation of **tie**, Transport Edinburgh Limited, CEC, the Scottish Ministers, Transport Scotland, the Edinburgh Tram Network and the Client;

7.2.1.19 so as to ensure that sustainability is considered and discussed with the Client in relation to energy consumption and the supply of materials from sustainable sources in respect of the manufacture and operation of the Trams;

7.2.1.20 in a manner that is not likely to be injurious to persons or property; and

7.2.1.21 using the Key Personnel.

7.2.2 provide such support, assistance and co-operation to the Client Parties in relation to the Project as the Client may reasonably request from time to time;

7.2.3 keep the Client's Representative and the Tram Inspector fully informed updated and apprised of all relevant developments in relation to the development, manufacturing, supply and testing of the Trams in a timely manner;

7.2.4 maintain the Trams until the Tram Maintenance Commencement Date so that they at all times comply with the Tram Employer's Requirements;

7.2.5 handover maintenance of the Trams to the Tram Maintainer in accordance with Clause 42 (*Maintenance Handover*); and

7.2.6 comply with the Construction (Design and Management) Regulations 2007 in so far as they are applicable to the discharge of the Tram Supplier's obligations under this Agreement, comply with the health and safety plan, the instructions of the Client's CDM coordinator in its activities on site and provide relevant information required by the Client's CDM coordinator within 20 Business Days of such request.

7.3 The Tram Supplier undertakes that the Tram Supplier's Proposals and Trams, Tram Related Equipment and any materials supplied shall meet the Tram Employer's Requirements.

7.4 The Tram Supplier shall, unless agreed otherwise by the Client in writing, assemble the Trams in Zaragoza, Beasain and Irun ("**Factory**"). The Client shall not unreasonably withhold its consent to a request from the Tram Supplier that it assembles the Trams in a location other than the Factory if the reason for such request is the occurrence of a serious event at the premises in the Factory which prevents the Trams from being assembled in the Factory.

7.5 The Tram Supplier shall promptly provide such information, assistance and expertise as any of the Client Parties may reasonably request to meet their respective obligations in respect of the Project.

7.6 The commencement or continuance of any proceedings pursuant to the Dispute Resolution Procedure shall not:

7.6.1 relieve the Tram Supplier from performing its obligations; or

7.6.2 suspend in whole or in part the Tram Supplier's obligations, under or in relation to this Agreement.

7.7 The Tram Supplier shall at all times keep itself fully informed about current professional and technical standards and about all matters relating to, or which might have a bearing on, the carrying out of the Tram Works.

7.8 The Tram Supplier's duties and obligations under or pursuant to this Agreement will not be released, diminished or in any other way affected by any independent inquiry into any matter which may be made or carried out by the Client or **tie** or by any firm, company or party on the Client or **tie's** behalf nor by any action or omission of any such firm, company or party whether or not such action or omission might give rise to any independent liability of such firm, company or party to the Client or **tie**.

7.9 The Tram Supplier is deemed to have satisfied itself that it fully understands the scope and extent of the requirements in respect of its obligations pursuant to this Agreement, and that it has sufficient information (including the Background Information) or will at the relevant time have sufficient information, to enable it to carry out its obligations pursuant to this Agreement. In connection with such information the Tram Supplier is deemed to have satisfied itself that it has or will have satisfied itself that it is accurate and complete before placing reliance upon it.

TIE00899939_0048

Liaison

7.10 The Tram Supplier shall (and shall procure that the Tram Supplier Parties) liaise with the Client, any Client Party, **tie**, any **tie** Party, the Operator and any other parties as may reasonably be required by the Client or **tie** to facilitate the production, by such persons, of any information required from them, in order that the carrying out of the Tram Works and its other obligations under this Agreement can be progressed according to the Tram Manufacturing and Delivery Programme. The Tram Supplier shall (and shall procure that the Tram Supplier Parties) liaise with the Client, any Client Party **tie**, any **tie** Party, the Operator, and any other parties as may be reasonably required by the Client or **tie** as often as is necessary in order to ensure that the Tram Works are carried out properly and in accordance with the terms of this Agreement.

7.11 The Tram Supplier shall (and shall procure that the Tram Supplier Parties shall) liaise with the Client, any Client Party, **tie**, any **tie** Party, the Operator and any other parties as may reasonably be required by the Client or **tie** and shall provide such information as may be reasonably requested by such persons in relation to the design, construction, testing, commissioning, integration, operation and maintenance of the Edinburgh Tram Network to the extent that such information is available to the Tram Supplier, and does not constitute Tram Supplier IPR.

Prohibited Materials

7.12 The Tram Supplier undertakes and warrants to the Client that at the date of contract award it has not specified for use and shall not specify for use and shall ensure that there shall not be used in relation to the Trams, any materials which at the time of specification or use (as the case may be):

7.12.1 are known to be deleterious in the particular circumstances in which they are specified to be used (either to health and safety or to the durability of the Trams); or

7.12.2 contravene any relevant standard or code of practice issued from time to time by the BSI Group or under a European directive relating to standards; or

7.12.3 do not accord with the guidelines contained in the edition of the publication "Good Practice in Selection of Construction Materials" (Ove Arup & Partners) current at the date of specification or use; or

7.12.4 contravene Good Industry Practice.

TIE00899939_0049

7.13 The Tram Supplier confirms that it has studied in detail the Employer's Requirements and each document comprised therein and has satisfied itself that no discrepancies or errors exist within the Employer's Requirements or between the Employer's Requirements and the Tram Supplier's Proposals, Trams and/or Tram Documentation and in relation to the Background Information in relation to this Agreement it has satisfied itself as to the veracity, accuracy, reasonableness, scope, materiality, currency (where applicable) and completeness of such Background Information, this comparison is limited to the scope of supply of the Tram Supplier and not to the Edinburgh Tram Network in its entirety. The Tram Supplier acknowledges that it accepts all risks arising from any discrepancies, errors or omissions that subsequently appear within or between such documents and that it shall not be entitled to make any claim against the Client for an extension of time, additional payment, any relief or otherwise in respect of any such errors, discrepancies or omissions. Where there is such discrepancy or error, the Tram Supplier shall as soon as reasonably practicable, and in any event within 5 Business Days, provide the Client with proposals for resolving such discrepancy or error which comply with this Agreement. Unless, within 10 Business Days of receipt by the Client of the Tram Supplier's proposals for resolving such discrepancy or error, the Client notifies the Tram Supplier requiring it to resolve the error, discrepancy or omission in a different manner (which manner shall be binding but shall be reasonable in time and cost having regard to the Employer's Requirements), the Tram Supplier shall resolve the discrepancy in the manner proposed by it.

7.14 The Tram Supplier shall not deliver to the Client, if **tie** novates this Agreement to Infraco, information relating to manufacturing, calculations and detailed design of its trams. Tram Supplier shall however put such information into escrow in accordance with the Escrow Agreement and where required by **tie** release information to the Tram Inspector on a confidential basis.

7.15 The Tram Supplier acknowledges that the Client has supplied to it a copy of the Infraco Contract as at the Effective Date.

7A. EQUIVALENT PROJECT RELIEF

7A.1 Raising EPR Claims

7A.1.1 In the event that the Tram Supplier reasonably considers it has an entitlement to an EPR Claim, then (except to the extent that the Tram Supplier's entitlement arises out of a breach of this Agreement by the Client which has not been caused or contributed to a corresponding breach by **tie**) the Tram Supplier shall notify the Client's Representative of the details as are reasonably required by the Client to evidence such

TIE00899939_0050

EPR Claim so as to enable the Client to meet its requirements in relation to the Client Claim.

7A.1.2 Provided that details of the EPR Claim are supplied in accordance with the relevant provisions of this Agreement and so as to enable the Client to meet its requirements in relation to the Client Claim the Client shall, following the appropriate procedure under the Infraco Contract, pursue or defend such EPR Claim with **tie** diligently, expeditiously and treating such claim as if the EPR Claim was its own. The Client shall identify the EPR Claim as separate from any claim the Client has under the Infraco Contract unless it can demonstrate to the reasonable satisfaction of the Tram Supplier that it is not reasonably practicable to do so.

7A.2 Processing EPR Claims

7A.2.1 In relation to any EPR Claims the Client shall

7A.2.1.1 keep the Tram Supplier fully informed as to the progress of such EPR Claims and, if requested by the Tram Supplier and, at the cost of the Tram Supplier, provide copies of all documentation relating to the same;

7A.2.1.2 act in good faith and shall not bring the good name of the Tram Supplier into disrepute;

7A.2.1.3 not act (or omit to act) in such a manner as would result in a breach of this Agreement;

7A.2.1.4 not act (or omit to act) in a manner which threatens the continuance of the Infraco Contract; and

7A.2.1.5 procure that **tie** shall consult with the Tram Supplier and that the Tram Supplier has the right to consult with **tie**, in relation to the EPR Claim.

7A.2.2 The Client shall notify and consult with the Tram Supplier in relation to: (i) **tie**'s and the Client's proposals to resolve the Client Claim to which the EPR Claim relates; and (ii) in the event that it is not reasonably practicable to identify the EPR Claim as separate pursuant to Clause 7A.1.2, the proportion of the Client Claim which is properly and reasonably attributable to the EPR Claim. The Tram Supplier agrees that the EPR Claim shall not the exceed any relief, entitlement and/or additional payment agreed or determine in relation to the Client Claim.

TIE00899939_0051

7A.2.3 The Client shall not resolve any Client Claim under the Infraco Contract to which an EPR Claim relates without the prior written consent of the Tram Supplier, which consent shall not be unreasonably withheld or delayed. If such consent is unreasonably withheld or if the Tram Supplier has not responded to any request for consent within ten (10) Business Days, the Tram Supplier shall be deemed to have consented to such resolution, agreement, withdrawal, compromise or settlement as proposed to the Tram Supplier by the Client.

7A.2.4 Should the Tram Supplier consent to the resolution of the Client Claim as notified to it by the Client pursuant to Clause 7A.2.2, then the provisions of Clause 7A.4 (*Agreement, Certification and Payment*) shall apply.

7A.3 Dispute Resolution Procedure

7A.3.1 Should the Client or **tie** raise a dispute under the Infraco Contract in relation to an EPR Claim or the Tram Supplier does not consent to the resolution of the Client Claim or, in the event that it is not reasonably practicable to identify the EPR Claim as separate pursuant to Clause 7A.1.2, the proportion of the Client Claim which is properly and reasonably attributable to the EPR Claim in the manner notified to it by the Client pursuant to 7A.2.2, then:

7A.3.1.1 the Tram Supplier shall be entitled to invoke the Dispute Resolution Procedure under this Agreement if not already invoked;

7A.3.1.2 the Client shall, at the request of the Tram Supplier, invoke the Dispute Resolution Procedure under the Infraco Contract; and

7A.3.1.3 the Client shall, at the request of Tram Supplier, invoke the Related Disputes mechanism contained at paragraphs 55 to 57 of Schedule 13 (Dispute Resolution Procedure) under this Agreement and procure that **tie** invokes the Related Disputes mechanism contained in Schedule Part 9 (*Dispute Resolution Procedure*) of the Infraco Contract.

7A.3.2 The Parties agree that should there be a resolution of the Client Claim or, in the event that it is not reasonably practicable to identify the EPR Claim as separate pursuant to Clause 7A.1.2, the proportion of the Client Claim which is properly and reasonably attributable to the EPR Claim following Clause 7A.3.1:

7A.3.2.1 where such resolution was achieved following the Internal Resolution Procedure or Mediation (as described in the Dispute Resolution Procedure),

then the Tram Supplier and the Client shall, and the Client shall procure that **tie** shall, be responsible for its own costs in relation to this Clause 7A (*Equivalent Project Relief*);

7A.3.2.2 where such resolution was achieved following the Adjudication procedure (as described in the Dispute Resolution Procedure), then the Tram Supplier and the Client shall, and the Client shall procure that **tie,** shall submit to the decision of the adjudicator in respect of allocation of costs; and

7A.3.2.3 where it is agreed, as part of the Internal Resolution Procedure immediately prior to the matter proceeding to "Adjudication" (as described in paragraphs 10 and 11 of the Dispute Resolution Procedure), by **tie**, the Tram Supplier and the Client that the Client's sole involvement in the Client Claim is in performing administrative functions in relation to the Client Claim, and not as an interested or affected party, then the Client shall be entitled to recover all its costs incurred, such Client costs shall be minimised as far as reasonably practicable in relation to this Clause 7A (*Tramco Equivalent Project Relief*) and payment of the Client costs shall be the responsibility of **tie** or payment shared as allocated between **tie** and the Tram Supplier by the adjudicator following the "Adjudication" procedure (as described in paragraph 48.2 in the Dispute Resolution Procedure).

7A.4 Agreement, Certification and Payment

7A.4.1 The Client shall resolve the Client Claim under the Infraco Contract:

7A.4.1.1 where consent has been given or is deemed to have been given pursuant to Clause 7A.2.3, in the manner notified to the Tram Supplier under Clause 7A.2.2; or

7A.4.1.2 where there has been a resolution following Clause 7A.3.1, as directed by such outcome following Clause 7A.3.1.

7A.4.2 The Client's Representative shall certify such amount or extension of time as is resolved following Clause 7A.4.1 in respect of the EPR Claim to the Tram Supplier within ten (10) Business Days of such sum or extension of time being resolved.

7A.4.3 Upon certification by the Client's Representative pursuant to Clause 7A.4.2, the Client shall make payment to the Tram Supplier in accordance with Clause 38 (*Price and Payment*) following the date upon which entitlement to payment in respect of the

TIE00899939_0053

relevant Client Claim arises under there Infraco Contract, or grant the extension of time to the Tram Supplier.

7A.4.4 Upon certification in accordance with Clause 7A.4.2 the Tram Supplier expressly, unconditionally and irrevocably waives and abandons all its rights to recover from the Client relief, entitlement and/or additional payment greater than such certified amount or extension of time in respect of the specific circumstances giving rise thereto.

7A.5 No Tramco Equivalent Project Relief on Termination

7A.5.1 For the avoidance of doubt the provisions of this Clause 7A (*Equivalent Project Relief*) shall not apply to the calculation of compensation on termination payments pursuant to this Agreement.

7B. NOTICES, CONSENTS, APPROVALS, CERTIFICATES AND DETERMINATIONS

7B.1 In so far as the Client is obliged to act reasonably under this Agreement it will be deemed to have acted reasonably where it is acting on the request, instruction, opinion or other act of **tie** under the Infraco Contract and **tie** has acted reasonably in giving such request, instruction, opinion or other act.

7B.2 In the event the Tram Supplier, acting reasonably, does not consider that the Client has acted reasonably, the Tram Supplier shall be entitled to invoke the dispute resolution procedure under Clause 7A.3.

7C. TRAM SUPPLY ADVANCE WORKS AGREEMENT

7C.1 On the Commencement Date, all work performed by the Tram Supplier under the Tram Supply Advance Works Agreement shall be deemed to have been performed under the Tram Supply Agreement and the Tram Supply Advance Works Agreement shall terminate.

8. PROJECT PARTNERING

8.1 The Parties agree to work in mutual co-operation to fulfil their agreed roles and responsibilities and apply their expertise to carry out and complete the Tram Works in accordance with this Agreement.

8.2 The Client and the Tram Supplier shall procure that each Client Party and each Tram Supplier Party (as appropriate) shall work in accordance with the principles set out in Clause 8.1.

8.3 Subject to Clause 8.4, each Party ("**First Party**") undertakes to co-operate with the other ("**Second Party**") in order to facilitate the performance of this Agreement and in particular the First Party shall:

8.3.1 approach all Permitted Variations on a collaborative and Open Book Basis;

8.3.2 use reasonable endeavours to avoid unnecessary complaints, disputes and claims against or with the Second Party;

8.3.3 comply with the provisions of the Dispute Resolution Procedure in relation to any such complaints, disputes and claims with or against the Second Party;

8.3.4 not interfere with the rights of the Second Party in performing its obligations under this Agreement, nor in any other way hinder or prevent the Second Party from performing those obligations or from enjoying the benefits of its rights;

8.3.5 take reasonable steps to mitigate any foreseeable losses and liabilities of the Second Party which are likely to arise out of any failure by the First Party to take any of the steps referred to in Clauses 8.3.2 to 8.3.4 (inclusive); and

8.3.6 take all reasonable steps to manage, minimise and mitigate all costs.

8.4 Nothing in Clause 8.3 shall:

8.4.1 interfere with the right of each of the Parties to arrange its affairs in whatever manner it considers fit (in compliance with Law) in order to exercise its rights and perform its obligations under this Agreement (in compliance with Law); or

8.4.2 relieve either Party from any obligation contained in this Agreement or from any obligation to pay any debt due and payable under this Agreement.

8.5 Senior representatives from the Parties shall meet on a quarterly basis (or as may be otherwise agreed by the Parties) to review:

8.5.1 any matter which has adversely affected or may adversely affect:

8.5.1.1 the completion of the Tram Works;

8.5.1.2 the performance and presentation of the Edinburgh Tram Network;

8.5.1.3 the functioning of the City of Edinburgh (including other modes of transport) and the people of Edinburgh, because of the carrying out of the Tram Works;

TIE00899939_0055

and/or

8.5.1.4 the Tram Supplier's ability to perform its obligations in terms of this Agreement; and

8.5.2 any proposal from either Party to:

8.5.2.1 minimise costs; and/or

8.5.2.2 optimise the performance and quality of the Edinburgh Tram Network.

8.6 Either Party may propose measures to address the matters set out in Clause 8.5.1 and a determination of what measures (if any) should be undertaken by the Tram Supplier and/or the Client to address such matters shall be considered in accordance with and subject to each Party's existing rights, obligations and the existing contractual mechanisms under this Agreement including but not restricted to the rights, obligations and contractual mechanisms set out in Clause 47 *(Relief Events)*, Clause 49 (*Compensation Events*), Clause 20 *(Changes)* and Clause 48 *(Qualifying Changes in Law)*.

8.7 Any proposal from either Party in terms of Clause 8.5.2 shall be reviewed in accordance with Clause 20 (*Changes*).

8.8 As required by the Client, the Tram Supplier shall procure the attendance of any of the Tram Supplier Parties at the meetings described in Clause 8.5.

9. SUPPORT FOR SYSTEM INTEGRATION

9.1 The Tram Supplier shall cooperate with the Client (in any way the Client acting reasonably may request, but for the avoidance of doubt additional Works not included in the scope of this Agreement shall be at the cost of the Client) in ensuring that the following key elements of the system integration of the Tram Works with the Edinburgh Tram Network are implemented, including:

9.1.1 determination of the sub-system performance requirements and to demonstrate by calculation that when such sub-systems are integrated they shall achieve the Edinburgh Tram Network System Availability Targets set out in Schedule 2 (*Employer's Requirements*) (including the Operations Performance Specification)

9.1.2 management of technical interfaces as set out in the Tram Employer's Requirements and as developed by the Client from time to time including issues such as electro-

TIE00899939_0056

magnetic compatibility, noise, vibration and wheel/rail interface ensuring that each and every material issue arising is satisfactorily closed out;

9.1.3 test management cooperation including input to the preparation of method statements, test scripts, the setting of pass/fail criteria and analysis in so far as the tests relate to the Trams;

9.1.4 alignment of operations and maintenance procedures to ensure they form a whole and safe system of work in so far as they relate to the maintenance of the Trams;

9.1.5 cooperation over system activation;

9.1.6 safety assurances and the Case for Safety; and

9.1.7 preparation and updating of a requirements traceability matrix which shall have the ability to trace the requirements of the Tram Works and/or the Tram Requirements Specification and Tram Employer's Requirements through the design process, the testing procedures and the operation of the Edinburgh Tram Network in so far as it relates to the Trams.

9.2 The Tram Supplier shall cooperate with the Client in ensuring that the delivery and commissioning of the Trams is fully integrated with the rest of the Edinburgh Tram Network but for the avoidance of doubt additional works not included in the scope of this Agreement shall be at the cost of the Client.

9.3 The Tram Supplier shall carry out all of the system integration activities described in the Tram Interface Specification.

9.4 The Tram Supplier shall liaise with the Operator and the Client as instructed by the Client in relation to:

9.4.1 system operation and related design issues;

9.4.2 the Systems Acceptance Tests; and

9.4.3 operational defects.

9.5 The Tram Supplier shall cooperate with the Client in ensuring that all elements of the design (which are relevant to the carrying out of the Tram Works) relative to the Edinburgh Tram Network are compatible with system integration and the Tram Supplier shall make qualified

TIE00899939_0057

personnel available to support effective system integration, acting reasonably and within its scope of supply.

9.6 The Tram Supplier shall be responsible for managing the configuration control of the modification status of the Trams. Specifically, but not exclusively controlling the introduction of software changes and hardware modifications through version control and providing documentation detailing the operational implications (if any) of the modifications, a minimum of 5 Business Days before their planned introduction.

9.7 The Tram Supplier shall co-operate and provide all information reasonably requested by the Client relating to the Tram Works so as to enable the Client to discharge its obligations under the Employer's Requirements including the provision of all information referred to in the Tram Interface Specification.

9.8 The Client shall, in relation to the tram interface and Depot, give adequate consideration to any issues relating to interface with the tram or tram maintenance raised in writing by the Tram Supplier and shall ensure that **tie** is informed in writing of any such issues raised.

10. INTERFACE WITH THE OPERATOR

Design Input and Technical Requirements

10.1 In accordance with Schedule 9 (*Review Procedure*), the Tram Supplier shall take account of any comments made by the Client or **tie** in relation to operational issues when refining the Tram Maintenance Plan, standards, procedures and safety documentation in accordance with Schedule 2 (*Employer's Requirements*) and when supporting system integration in accordance with Clause 9 (*Support for System Integration*). The Tram Supplier shall comment on functional and maintainability issues to the Client during the design and construction process, seeking to optimise the whole life asset cost of the Tram. These comments shall be delivered to **tie**, the Operator and the Client.

Operation and Maintenance Procedures

10.2 The Tram Supplier acknowledges that the Operator shall be responsible for Operator Maintenance of the Edinburgh Tram Network and in relation to such maintenance, the Tram Supplier shall at all times liaise with the Operator in its performance of the responsibilities set out in the Operator Maintenance Plan and co-ordinate such performance with the carrying out of the Tram Works. The Tram Supplier and the Client agree to work in mutual cooperation to allow the Operator to perform such maintenance in accordance with the terms of the Operator

Maintenance Plan with a view to ensuring that the Edinburgh Tram Network as a whole and each part of it are continuously available for the provision of Transport Services.

10.3 As directed by the Client, the Tram Supplier shall accept and act upon reasonable instructions from the Operator in respect of specific contractual rights including safety management, possession co-ordination and maintenance interaction. Should these instructions be likely to impede or delay the execution of works by the Tram Supplier then the Operator shall be required to confirm them in writing to the Tram Supplier. In so far as the written instructions do not arise from an act or omission under this Agreement or procedures by the Tram Supplier the Tram Supplier shall not be liable for such non-execution or delay and penalties shall not be applied. If the instructions or actions require the addition of works or duties or deliveries not included in the scope of this Agreement, the Tram Supplier shall be entitled to claim reasonable, substantiated economic compensation for such works from the Client in accordance with Clause 49 (*Compensation Events*). The Client shall remain bound by such written instructions and/or actions issued by the Operator pursuant to this sub-clause until such time as they are rescinded.

10.4 The Tram Supplier shall work together with the Operator with the continual objective that the Tram Works be delivered in accordance with the Tram Employer's Requirements. The Tram Supplier:

10.4.1 shall respond promptly and in compliance with the timing commitments set out in this Agreement to any notification by the Operator that there is a requirement for Tram Works of which the Operator becomes aware, and shall give the Client a copy of any said notification which is received;

10.4.2 shall promptly notify the Operator, **tie** and the Client of any requirement for Operator Maintenance of which the Tram Supplier becomes aware;

10.4.3 shall co-operate with the Operator in relation to the planning and execution of the Tram Works; and

10.4.4 shall co-operate with the Operator in relation to any aspect of the Tram Employer's Requirements where relevant to the Tram Supplier's scope of supply.

10.5 If, at any time after the Commencement Date, it appears likely to the Tram Supplier that any planned works or activities to be carried out by the Tram Supplier or Tram Maintainer will necessitate interruption to or restriction of the Transport Services on the Edinburgh Tram Network, the Tram Supplier (as appropriate) shall:

TIE00899939_0059

10.5.1 notify the Client, **tie** and the Operator not less than 30 days prior to such planned works or activities, and take all reasonable steps to support the Operator in notifying passengers as soon as reasonably practicable in advance of the carrying out of such planned works or activities, of the nature of such work and the likely disruption or restriction of the Transport Services; and

10.5.2 take all steps, where required by the Client, which are reasonably practicable to minimise the adverse consequences of such works or activities to passengers.

10.6 In the event of any unplanned works or activities to be carried out by the Tram Supplier as a result of a system failure, breakdown or an emergency, the Tram Supplier shall:

10.6.1 notify the Client and the Operator as soon as possible of the nature of such works or activities and the likely disruption to the Trams; and

10.6.2 take all steps which are reasonably practicable to minimise the adverse consequences of such works and activities to passengers. The Tram Supplier shall take such steps that shall include support to the Operator or the Client as the case may be.

10.7 Where the Tram Supplier has been notified by the Client of any proposed variation under the DPOFA which in the Client's opinion (acting reasonably) may materially affect the Tram Supplier's performance of its obligations or the exercise of its rights under this Agreement, the Tram Supplier shall respond with comments within 10 Business Days of being notified by the Client of any such proposed variation under DPOFA. Failure by the Tram Supplier to respond as stipulated in this Clause shall be a bar to any claim for relief or compensation under this Agreement.

10.8 The Tram Supplier shall provide a permanent representative for the Project Safety and Certification Committee ("**PSCC**") who shall be responsible for the Tram Supplier's mandatory participation in and technical contribution to the PSCC's output and the discharge of its responsibilities.

10.8.1 The Tram Supplier's obligations shall encompass as a minimum:

10.8.1.1 participation on a compulsory basis in all liaison meetings with HMRI, the Independent Competent Person and the Emergency Services;

10.8.1.2 the development and implementation of a safety management system (the "**Tram Supplier Safety Management System**") which shall address without limitation:

TIE00899939_0060

(a) Tram Supplier staff competency and its continual assessment;

(b) training on all safety related issues;

(c) safety procedures;

(d) record keeping and audit;

(e) certification of materials and equipment;

(f) frequency and mode of audit by the Tram Supplier of the Tram Supplier Safety Management System;

(g) incident response and management; and

(h) continual improvement and best practice.

10.9 The Client, **tie** and the Operator shall be entitled to review the Tram Supplier's Safety Management System (and its implementation) at any time upon notice which is appropriate in the circumstances and in any case within no more than 3 days notice. For the avoidance of doubt, **tie**, the Client and the Operator shall be entitled to immediate access upon the occurrence of an incident which potentially involves the safe functioning of the Tram on the Edinburgh Tram Network.

10.10 It shall be the responsibility of the Tram Supplier to undertake and complete verification, through agreed procedure, of the safety and service readiness of the Tram or Trams prior to use for testing and commissioning and to certify this status to the Client, **tie** and to the Operator in an agreed form.

10.11 In the event that the Operator can demonstrate to the Tram Supplier that the Tram or Trams are not ready for testing and commissioning, the Tram Supplier shall notify the Client and **tie,** and the Tram Supplier shall rectify any deficiency in accordance with this Agreement which is preventing the commencement of testing and commissioning in accordance with this Agreement.

10.12 The Tram Supplier shall liaise effectively with the Client, **tie** and the Operator in co-ordination of health and safety issues at the Depot in accordance with the Depot Sub-Licence.

10.13 Following the Service Commencement Date, the day-to-day operation of the Edinburgh Tram Network shall be the responsibility of the Operator. For the purpose of operating and maintaining the Edinburgh Tram Network and to enable the efficient operation of the

Edinburgh Tram Network, the Tram Supplier shall provide technical advice free of charge to the Client, the Operator and **tie** regarding the operational deployment and integration of the various components of the Tram and any other information regarding their design, construction, standards, integration, operation and maintenance which the Infraco, the Operator and/or **tie** may reasonably request.

Facilities and Access

10.14 The Tram Supplier shall at all times provide to the Operator, **tie** and the Client such access to the site, and the places where the Tram Works are being performed, during the performance of the Tram Works as the Operator may reasonably require and in accordance with Clause 10.15, provided that such access shall not disrupt or interfere with the performance by the Tram Supplier or any Tram Supplier Party of the Tram Works and the Client shall, and shall procure that the Operator shall, during any period when it or they have access to the site or the Tram Works, comply with all rules and regulations applicable to working at those premises for the safety of persons and convenience of the public.

10.15 The Tram Supplier acknowledges that the Operator, **tie** and the Client will require access to the site, and the places where the Tram Works are being performed in order to prepare for the operation of the Edinburgh Tram Network from the Service Commencement Date. The Tram Supplier agrees that it will co-operate with the Operator, **tie** and the Client and plan to avoid any interference with mobilisation by the Operator.

10.16 The Client agrees that where any damage is caused to the Tram Works by the Operator or by **tie**, the repair of such damage shall not be part of the Tram Supplier's obligations under this Agreement but where the Client requires the Tram Supplier to repair such damage, it will issue a Client Notice of Change in respect of such repair works.

10.17 The Client shall at all times provide to the Tram Supplier access to the site and the places where the Tram Works or Tram Maintenance Services require to be performed. The Tram Supplier acknowledges that such access may not be exclusive and the Tram Supplier and the Client shall co-ordinate with each other in relation to the provision of access. For clarity, such access includes timeous access to the Depot.

System Acceptance

10.18 The Tram Supplier shall ensure that at all times it works closely and effectively with the Operator in the performance of both the Operator and the Tram Supplier's obligations pursuant

TIE00899939_0062

to the Systems Acceptance Tests and the associated obligations on testing and commissioning set out in Schedule 2 (*Employer's Requirements*).

Partnering

10.19 The Tram Supplier shall use reasonable endeavours to work collaboratively with the Operator at all times in order to:

10.19.1 maximise productivity during the Tram Works and minimise disruption for the public and third parties;

10.19.2 ensure the effective discharge of the Tram Supplier's obligation to support system integration in accordance with Clause 9 (*Support for System Integration*);

10.19.3 maintain the highest standards achievable with regard to the provision of the Tram Works;

10.19.4 minimise and give best advance notice to one another and to the Client and **tie** of any interruption to Tram Works caused by any Tram Supplier Default, maintenance (planned or unplanned) or third party incident;

10.19.5 safeguard proper performance of the Tram Works and all obligations under this Agreement; and

10.19.6 mutually support adherence to the Client's Programme and all related timelines and programmes and to share with the Client, **tie** and the Operator on a systematic basis, Deliverables and key information connected with such adherence.

Nuisance

10.20 The Tram Supplier shall at all times seek to minimise any nuisance or inconvenience to or interference with the business or operations of the owners, tenants or occupiers of premises in the locality of the Depot, to TEL's bus operations and to the public generally, including measures to reduce the nuisance from noise, dust, smell, fumes and vibration during the carrying out of the Tram Works. The Tram Supplier shall comply with the requirements of the Code of Maintenance Practice in this regard.

11. GENERAL WARRANTIES

11.1 The Tram Supplier represents and warrants to the Client that:

TIE00899939_0063

11.1.1 none of the Tram Supplier, or any officer, agent or employee of the Tram Supplier or any Affiliate of the Tram Supplier has committed a Prohibited Act;

11.1.2 all factual information in relation to the Trams which has been given by the Tram Supplier or any of its respective officers, employees, agents or Affiliates in the Tram Supplier's Proposals or in any written response to subsequent written requests or enquiries by the Client was when given and remains as at the Effective Date, true and accurate in all material respects and all projections, estimates and statements of belief in the Tram Supplier's Proposals or such responses have been prepared with due care and attention and there is no fact or matter known to the Tram Supplier and not already disclosed in writing to the Client's Representative which renders any such information untrue, inaccurate or misleading or might, if disclosed, adversely affect the decision of anyone considering whether or not to contract with the Tram Supplier;

11.1.3 it:

11.1.3.1 is duly incorporated under the law of Spain and has the power to own its own assets and carry on its own business; and

11.1.3.2 has full power and authority to enter into and perform this Agreement which constitutes a binding obligation on the Tram Supplier in accordance with its terms;

11.1.3.3 the Tram Supplier will not, by performing its obligations under this Agreement, be in breach of any undertaking, agreement or legal obligation of any nature in respect of any third party or of any applicable Law so as to have a material adverse effect on its ability to discharge its obligations under this Agreement;

11.1.4 the Tram Supplier is not involved in any dispute with HM Revenue and Customs or any other fiscal or regulatory authority in any jurisdiction concerning any matter which could affect the business of the Tram Supplier or its ability to perform the Tram Works in any way;

11.1.5 the Tram Supplier's Proposals or responses to subsequent enquiries by the Client or any Client Party relating to the manner in which the Tram Supplier proposes to perform the Tram Works does not involve the use of any designs, materials, know how, trademark, business name, or processes which represent or would represent a breach of any Intellectual Property Rights belonging to any third party, or a breach of

TIE00899939_0064

any duties of confidentiality owed to, any third party, or otherwise infringe the legal rights of any third party;

11.1.6 no act has been committed or event or circumstance occurred in respect of the Tram Supplier which constitutes a Tram Supplier Default as at the Effective Date and no circumstances are known which make it likely that such a Tram Supplier Default will occur during the Term;

11.1.7 no litigation, arbitration or proceedings are in progress or, to the best of the knowledge and belief of the Tram Supplier, are pending or threatened, against it or any of its assets which might have an adverse effect on the ability of the Tram Supplier to observe and perform the Tram Works;

11.1.8 the performance of the Tram Works does not create any situation in which a conflict of interest arises for the Tram Supplier;

11.1.9 the Tram Supplier does not use any processes and is not engaged in any activities which involve the misuse of any confidential or proprietary information belonging to any third party;

11.1.10 the Tram Supplier's provision of any Deliverables and the use by the Client of any of the Deliverables provided to it as part of the Tram Works has not infringed and shall not infringe any third party's Intellectual Property Rights; and

11.1.11 there has been no material adverse change to the financial condition of the Tram Supplier since the audited accounts for the financial year 2007 including any matter resulting in a downgrade of the Tram Supplier's credit rating with any commercially acknowledged independent rating agency reporting the transportation sector.

11.2 Each of the warranties and representations set out in Clause 11.1 shall be construed as a separate and independent warranty and (save where expressly provided to the contrary) shall not be limited or restricted by reference to or inference from any other terms of this Agreement.

11.3 The Tram Supplier hereby undertakes with the Client that it will as soon as reasonably practicable (and in any event within 3 Business Days) disclose in writing to the Client any event or circumstance which may arise or become known to it after the date of this Agreement which is materially inconsistent with any of the warranties or representations set out in this Clause 11 (*General Warranties*) or which has or is likely to have an adverse effect on the Project.

TIE00899939_0065

11.4 The warranties and representations set out in Clause 11.1 shall be deemed to be repeated by the Tram Supplier as at the Commencement Date and thereafter on the Works Commencement Date and each date on which a Milestone Payment is made.

11.5 Neither **tie** nor the Client gives any warranty or undertaking or makes any representation as to the completeness, currency, accuracy or fitness for any purpose of any of the Background Information and, subject to Clause 41.5, neither the Client, **tie** nor any Client Party or any of their respective members or advisers nor any of their employees shall be liable to any party to this Agreement in contract, delict (including negligence or breach of statutory duty), or otherwise as a result of:

11.5.1 any inaccuracy, error, defect, omission, unfitness for any purpose or inadequacy of any kind whatsoever in the Background Information; and/or

11.5.2 any failure to make available to the Tram Supplier or any of the Tram Supplier Parties any materials, documents, drawings, plans or other information relating to the Project,

provided that nothing in this Clause 11.5 shall exclude any liability in respect of any statements made or information provided fraudulently.

12. CONSENTS

12.1 The Tram Supplier shall (at its own cost and expense):

12.1.1 obtain and maintain in effect all Consents which may be required for the performance of the Tram Works and/or pursuant to this Agreement from time to time; and

12.1.2 implement each Consent within the period of its validity and in accordance with its terms.

12.2 The Tram Supplier shall provide copies of such Consents to the Client's Representative.

12.3 Acknowledgement by the Client of the photocopies of Consents provided to them pursuant to Clause 12.2 shall not in any way affect the Tram Supplier's obligations or relieve the Tram Supplier from its obligations pursuant to this Clause 12 (*Consents*) or otherwise.

12.4 Where **tie**'s or the Client's or the Operator's authorisation or completion of documentation in respect of compliance with any Law or the obtaining of any Consent may be required, the Tram Supplier shall furnish the relevant documentation to **tie** or the Client or the Operator (as the case may be) and, where possible, permit **tie** or the Client or the Operator a period of 10 Business Days to authorise or complete it.

TIE00899939_0068

12.5 The Client shall endeavour to assist the Tram Supplier with applications for Consents which it is required to obtain under this Agreement for the performance of the Tram Works where the Client considers, in its sole discretion, that such assistance would facilitate the Tram Supplier in obtaining any Consents. Such assistance shall in no way affect the principle set down in Clause 12.1 that it is the Tram Supplier's obligation to obtain, maintain and implement the Consents required by this Agreement. Subject to Clause 41.3, the Client shall not incur any liability whatsoever to the Tram Supplier in connection with its actions pursuant to this Clause 12.5.

12.6 The Tram Supplier shall keep the Client's Representative and the Tram Inspector informed about its programme for seeking Consents and its progress in obtaining Consents and, within 5 Business Days of a Consent being granted or refused, supply to the Client's Representative and the Tram Inspector a copy of such Consent or refusal.

12.7 For the avoidance of doubt, where it is necessary, in order to achieve the Tram Manufacturing and Delivery Programme for applications for Consents to be made before the Works Commencement Date, such applications shall be prepared and submitted in accordance with the applicable rules and procedures before the Works Commencement Date, within the timescales and to the extent necessary to meet the Tram Manufacturing and Delivery Programme.

12.8 The Tram Supplier shall provide such information and assistance as the Client may reasonably request to assist the Client in obtaining, maintaining in effect and implementing all other consents which may be required for the purposes of the Project.

13. CLIENT'S REPRESENTATIVE

13.1 The Client's Representative shall:

13.1.1 exercise the functions and powers of the Client in relation to the Project which are identified in this Agreement as functions and powers to be carried out by the Client's Representative;

13.1.2 exercise such other functions and powers of the Client under this Agreement as the Client may notify in writing to the Tram Supplier from time to time; and

13.1.3 be the primary point of contact for the Tram Supplier with the Client,

and the Tram Supplier shall observe, and shall procure that any Tram Supplier Parties observe, all reasonable instructions of the Client and the Client's Representative given in accordance

TIE00899939_0067

with this Agreement. The Tram Supplier shall not, and shall procure that any Tram Supplier Parties shall not, act upon any instruction from any other party unless confirmed by the Client or the Client's Representative in writing. If the Tram Supplier or any Tram Supplier Parties shall receive any instructions from any other parties, the Tram Supplier shall notify the Client or the Client's Representative immediately.

13.2 The Client's Representative shall be entitled at any time, by notice in writing to the Tram Supplier, to authorise any other persons to exercise the functions and powers of the Client delegated to him, either generally or specifically. Until further notice from the Client, any act of any such person shall, for the purposes of this Agreement, constitute an act of the Client's Representative and all references to "the Client's Representative" in this Agreement (apart from Clause 13 (*Client's Representative*)) shall be taken as references to such person so far as they concern matters within the scope of such person's authority.

13.3 The Client may by notice in writing to the Tram Supplier change the identity of the Client's Representative. Such change shall have effect on the date specified in written notice.

13.4 During any period when a Client's Representative has not been appointed (or when the Client's Representative is unable through illness, incapacity or any other reason whatsoever to carry out or exercise his functions under this Agreement), the Client shall carry out the functions which would otherwise be performed by the Client's Representative.

13.5 No decision, act or omission of the Client, or the Client's Representative shall, except as otherwise expressly provided in this Agreement:

13.5.1 in any way relieve or absolve the Tram Supplier from, modify, or act as a waiver or personal bar of, any liability, responsibility, obligation or duty under this Agreement;

13.5.2 in the absence of an express written instruction or authorisation issued by the Client under Clause 20 (*Changes*), constitute or authorise a variation; or

13.5.3 be construed as restricting or binding the Client in any way save with regard to the specific project matters to which it relates.

13.6 The Tram Supplier shall be entitled to treat all instructions and directions of the Client's Representative in respect of any functions and powers of the Client which have been delegated to the Client's Representative in accordance with Clause 13.1 as those of the Client provided always that such instructions or directions of the Client's Representative are in writing, are not in conflict with and is consistent with this Clause 13 (*Client's Representative*) and the other provisions of this Agreement or any other express instructions or directions of the Client, and

TIE00899939_0068

the Tram Supplier shall not be required to determine whether an express authority has in fact been given. The Tram Supplier shall, as soon as reasonably practicable, bring to the attention of the Client any instructions or directions that are given to the Tram Supplier that are ambiguous or in conflict or inconsistent, and the Client will verify such instructions in writing.

13.7 If for any reason the Client's Representative considers it necessary to give any instructions or directions orally, then, provided that the Client confirms such instruction or direction in writing within five Business Days, such oral instruction or direction shall be deemed to be an express instruction or direction of the Client.

13.8 Notwithstanding any other provision of this Agreement, the Tram Supplier shall not accept instruction from any party other that the Client and shall on receipt of any such instruction inform the Client of the same.

14. TRAM SUPPLIER'S REPRESENTATIVE

14.1 The Tram Supplier shall appoint a Tram Supplier's Representative who shall:

14.1.1 act as the principal point of contact for the Client, and the Client's Representative in relation to all matters related to this Agreement;

14.1.2 have full authority to act on behalf of the Tram Supplier for all purposes of this Agreement, and the Client and the Client's Representative shall be entitled to treat all instructions and directions of the Tram Supplier Representative as those of the Tram Supplier;

14.1.3 manage and co-ordinate the provision of the Tram Works by the Tram Supplier (and any Tram Supplier Party) and the integration of provision of the Tram Works with the tasks being performed by the Client's internal team and the other advisers appointed by the Client and/or **tie** (where such tasks have been notified to the Tram Supplier); and

14.1.4 liaise with the Client's Representative in relation to various matters including the scope of the Tram Works to be carried out from time to time.

14.2 The Tram Supplier may by written notice to the Client change the identity of the Tram Supplier's Representative. Where the Tram Supplier wishes to do so, it shall by written notice to the Client propose a substitute for approval, taking account of the need for liaison and continuity in respect of the provision of the Tram Works and the Tram Manufacturing and

TIE00899939_0069

Delivery Programme when the change is proposed. Such substitute shall be subject to the prior written approval of the Client (not to be unreasonably withheld or delayed).

14.3 The Tram Supplier shall also nominate a deputy to the Tram Supplier's Representative. During any period when the Tram Supplier's Representative is unable through illness, incapacity, annual leave or any other reason whatsoever to carry out or exercise his functions under this Agreement, such deputy shall carry out the functions which would otherwise be performed by the Tram Supplier's Representative.

15. DESIGN DEVELOPMENT

15.1 The Tram Supplier shall develop and finalise the Deliverables in accordance with this Agreement, and the Client shall be entitled to review the Deliverables (which shall include any amendment to any submitted item) in accordance with Schedule 9 (*Review Procedure*).

15.2 The Tram Supplier shall submit the design of any changes and any other Deliverables associated with any Permitted Variations to the Client's Representative for review pursuant to Schedule 9 (*Review Procedure*).

15.3 The Tram Supplier shall allow the Client's Representative, at any reasonable time, a reasonable opportunity to view any Deliverable at any stage of development, and this opportunity shall be made available to the Client's Representative as soon as reasonably practicable following receipt of any written request from the Client's Representative. Where electronic versions of the Deliverables are available, the Tram Supplier shall upload such Deliverables (including any drawings comprised within the Deliverables) on the extranet established and maintained by the Client as soon as practicable.

15.4 The Tram Supplier shall provide the Deliverables in accordance with the Deliverables Programme set out in part 5 of Schedule 4 (*Programme*).

15.5 During the preparation of the Deliverables, the Client and/or the Client's Representative shall at its discretion but acting reasonably be entitled to call for a meeting to discuss the development of any Deliverable, and the Tram Supplier shall give due consideration to any comments made by the Client or the Client's Representative at any such meetings. As soon as reasonably practicable following any such meeting, the Tram Supplier will prepare and circulate to those attending the meeting, a report listing the Deliverables discussed and any comments made at such meeting.

15.6 If it should be found that the Deliverables do not fulfil the requirements of this Agreement or the needs of any Approval Bodies, the Tram Supplier shall at its own expense amend the

TIE00899939_0070

Deliverable. Such amendment shall be made in accordance with Schedule 9 (*Review Procedure*) and such amendment and rectification shall ensure that the Deliverable shall satisfy the requirements of this Agreement and any Approval Bodies.

15.7 The Tram Supplier shall provide the Client with all Deliverables in accordance with the terms of this Agreement and where no timescale for provision of such Deliverables is specified in the Deliverables Programme, such Deliverables shall be provided to the Client as soon as reasonably practicable. The Tram Supplier shall provide to the Client three copies of the agreed Deliverables in hard copy form and one copy in an agreed soft copy form (as appropriate to the format of the Deliverables).

15.8 The Tram Supplier accepts all risks arising from any conflicts, ambiguities, discrepancies, errors or omissions that subsequently appear within or between any of the Tram Requirements Specification and any of the other Deliverables, and the Tram Supplier shall not be entitled to make any claim against the Client for an extension of time, payment or otherwise in respect of any such conflicts, ambiguities, discrepancies, errors or omissions.

15.9 The Tram Supplier shall within 10 Business Days notify the Client upon becoming aware of any conflicts, ambiguities, discrepancies, errors or omissions within or between any of the Tram Requirements Specification, and any of the other Deliverables. Where there are any conflicts, ambiguities, discrepancies, errors or omissions, the Tram Supplier shall provide with any such notification its proposals for resolving such conflicts, ambiguities, discrepancies, errors or omissions in compliance with this Agreement. Such proposals could include the suggestion that no action is required. The Tram Supplier shall proceed with its proposals to resolve any such conflicts, ambiguities, discrepancies, errors or omissions as soon as reasonably practicable. If the proposal from the Tram Supplier is that no action is required or the Client does not agree with the action proposed by the Tram Supplier, the Client may notify the Tram Supplier, within 10 Business Days of the Tram Supplier's notice, to resolve any conflicts, ambiguities, discrepancies, errors or omissions in a different manner (which notification shall be binding on the Tram Supplier).

16. MEETINGS

16.1 The Tram Supplier and the Client shall procure that the Tram Supplier's Representative and the Client's Representative (respectively) attend monthly progress meetings at the Client's premises in Edinburgh or at the Tram Supplier's premises (unless agreed otherwise in writing), with **tie**, any **tie** Party, the Tram Inspector and/or any person authorised by the Tram Supplier's Representative or the Client's Representative in writing to review progress in relation to the design, manufacture, delivery, testing and/or commissioning of the Trams.

TIE00899939_0071

16.2 Notwithstanding the provisions of Clause 16.1, the Client's Representative or the Tram Supplier's Representative may call a meeting at any time to review progress with the design, manufacture, delivery, testing and/or commissioning of the Trams or any other matter provided that the Representative calling such meeting gives all other Representatives at least 5 Business Days written notice of such meeting, at a location agreed between the parties.

16.3 If reasonably requested by the Client, the Tram Supplier shall attend and shall procure that the Tram Supplier's Representative, any Key Personnel and/or Tram Supplier Parties attend any meetings called by **tie**, **tie's** Representative, any **tie** Party, the Client, the Client's Representative or any other party .

16.4 Any relevant Party (including representatives of such Parties) may with the Client's Representative's prior written consent (such consent not to be unreasonably withheld or delayed) participate in a meeting called under this Agreement through the medium of one or more conference telephones or similar form of communication equipment, provided that all persons participating in the meeting are able to hear and speak to each other throughout such meeting.

16A. WORK TO BE TO SATISFACTION OF THE CLIENT

16A.1 The Tram Supplier shall complete the Tram Works in strict accordance with this Agreement to the satisfaction of Client (acting reasonably).

16A.2 The whole of the materials, Tram Related Equipment and labour to be provided by the Tram Supplier under Clause 7 (*General Obligations*) and the mode, manner and speed of construction of the Tram Works are to be in accordance with this Agreement.

16B. ERRORS AND OMISSIONS IN THE TRAM WORKS

16B.1 If during the carrying out of the Tram Works and/or where the Tram Supplier has completed the Tram Works, the Client becomes aware of any error or omission in the carrying out of the Tram Works or of any other breach of this Agreement, the Client shall notify the Tram Supplier, who shall, at its own expense and in liaison with the Client, rectify any error or omission or breach or, where this is agreed by the Client to be impracticable or undesirable, take such other agreed steps to address the error or omission.

16B.2 Any reasonable and demonstrable direct costs to the Client associated with the Client remedying any such errors or omissions or breaches shall be paid by the Tram Supplier to the Client.

TIE00899939_0072

16B.3 These arrangements shall in no respect diminish the Client's ability to recover damages from the Tram Supplier for direct losses incurred by the Client consequent upon the error or omission or breach in question.

16B.4 If and to the extent that the Tram Supplier fails to carry out the necessary rectification and/or other agreed steps in accordance with Clause 16B.1 to the Client's reasonable satisfaction and/or within a reasonable period of time, the Client shall be entitled to carry out such rectification and/or other agreed steps itself, or procure the carrying out by a third party of such rectification and/or other agreed steps in accordance with Good Industry Practice at the Tram Supplier's expense and shall recover any costs from the Tram Supplier as a debt.

17. TESTING AND COMMISSIONING INSPECTIONS

17.1 The Representatives or anyone authorised by them to act on their behalf, **tie**, **tie's** Representative and the Tram Inspector shall be entitled to attend and witness any and all inspections and/or tests carried out pursuant to Clauses 28 (*Pre-Delivery Inspections and Factory Acceptance Tests*), 30 (*Tram Delivery Tests and Certification*) and 31 (*Training, Commissioning, Testing and Certification*).

17.2 The Tram Supplier's Representative shall give the other Representatives, **tie** and **tie's** Representative at least 10 Business Days notice before each and every inspection or test is due to take place pursuant to Clauses 28 (*Pre-Delivery Inspections and Factory Acceptance Tests*), 30 (*Tram Delivery Tests and Certification*) and 31 (*Training, Commissioning, Testing and Certification*).

17.3 The Tram Supplier shall procure that:

17.3.1 without prejudice to Clause 24 (*Audit and Inspection*), the Representatives or anyone authorised by them to act on their behalf, **tie**, **tie's** Representative and the Tram Inspector shall have such access as is necessary at all reasonable times during normal working hours to the sites where the Trams or their components are to be designed, manufactured, tested or assembled provided that the Tram Supplier is given sufficient prior notice; and

17.3.2 at the manufacturing sites, the Tram Inspector, the Operator's representative, the Client's Representative and **tie's** Representative shall be given and shall be entitled to use such office accommodation and facilities as may reasonably be available provided that in using such office accommodation and facilities the Tram Inspector, the

TIE00899939_0073

Operator's representative, the Client's Representative and **tie's** Representative shall comply with the reasonable instructions of the Tram Supplier.

17.4 The Tram Supplier shall (where it has access to any site and/or premises in relation to this Agreement which are not controlled or owned by it) comply with all rules and regulations notified to it by the owner or occupier of such site or premises or otherwise applicable to it in relation to it accessing and using such site and/or premises.

17.5 All operations carried out by the Tram Supplier in performing its obligations under this Agreement in Edinburgh shall be conducted with due regard to third parties and so as to minimise noise, disturbance and/or interference with third parties.

18. PERSONNEL

18.1 The Tram Supplier shall ensure that the Key Personnel in respect of the Pre-Works Development Services are appointed on or prior to the Commencement Date and that the Key Personnel in respect of the rest of the Tram Works are appointed on or prior to the Works Commencement Date. The Tram Supplier shall obtain the prior written consent of the Client's Representative (such consent not to be unreasonably withheld or delayed) before removing or replacing any Key Personnel at any time from the Commencement Date up to the date of the issue of the Certificate of Tram Commissioning in respect of the last Tram.

18.2 The Tram Supplier acknowledges that the Key Personnel are essential to the proper performance of the Tram Supplier's obligations under this Agreement. The Tram Supplier shall ensure that the role of any Key Personnel is not vacant for any longer than 10 consecutive Business Days and shall replace any Key Personnel who leave its employment with employees with similar levels of training expertise and experience.

18.3 The Tram Supplier shall, and shall procure that its Sub-contractors shall, maintain a true and correct set of records of all transactions relating to the manufacture of the Tram or part of the Tram and make such records available at all reasonable times for inspection by the Client.

18.4 If reasonably requested by the Client, the Tram Supplier shall make available to the Client, personnel of appropriate competence, expertise and qualifications (employed either by the Tram Supplier or any relevant Sub-contractor) for the purposes of dealing with matters referred to in this Agreement. In particular the duties of such personnel shall include but not be limited to:

18.4.1 attending meetings called in accordance with Clause 16.2; and

TIE00899939_0074

18.4.2 providing (as reasonably requested by the Client) reports, information, advice and/or assistance in relation to matters referred to in this Agreement, including prior to and/or following any such meeting.

18.5 The Tram Supplier shall until the expiry of the Extended Tram Warranty Period render to the Client, the Tram Inspector and (at the Client's direction) any other Client Party such technical assistance and advice in relation to any Tram as such parties may at any time reasonably require at no additional charge.

18.6 The Tram Supplier shall from the expiry of the Extended Tram Warranty Period until the expiry of this Agreement render to the Client and (at the Client's direction) any other Client Party such technical assistance and advice in relation to any Tram as such parties may reasonably require charged at six hundred and twenty pounds (£620) sterling per day.

18.7 Neither party shall, during the period of this Agreement, contract or retain as an adviser or consultant, any person currently or previously employed or engaged in the previous 6 months by the other Party unless the prior written approval of the other party has been obtained.

18.8 The Tram Supplier shall (and shall procure that the Key Personnel, its staff employed in the performance of the Tram Works and the Tram Supplier Parties shall) comply with all regulatory requirements appropriate to and required for the performance of the Tram Works, **tie's** Drug and Alcohol Policy and any rules, regulations and instructions from the Client's Representative.

18.9 The Tram Supplier shall not at the Depot or at any premises from where any Tram Supplier Parties carry out the Tram Works and/or any obligations under this Agreement at any time allow the consumption of, or work under, the influence of alcoholic liquors or drugs or give, sell or barter any alcoholic liquors or drugs or permit or suffer any such gift, sale or barter to be made by any Tram Supplier Party.

18.10 The Tram Supplier shall employ or cause to be employed in and about the construction and completion of the Tram Works and in the superintendence thereof only persons who are careful, skilled and experienced in their several trades and callings. The Tram Supplier shall ensure that its supervisors and operatives who are involved in carrying out the Tram Works shall have appropriate certification, if relevant to the works they are performing.

18.11 The Client's Representative shall, acting reasonably, have the right to object to and require the Tram Supplier to remove or cause to be removed from the site of the Tram Works at the Edinburgh Tram Network any person employed thereon who mis-conducts himself in the

MK

TIE00899939_0075

performance of his duties or fails to conform with any particular provisions with regard to safety which may be set out in this Agreement or persists in any conduct which is prejudicial to safety or health, and such persons shall not be again employed upon the site of the Tram Works at Edinburgh Tram Network without the permission of Client's Representative.

18.12 Any costs incurred by the Tram Supplier in removing, or causing to be removed, a person in accordance with Clauses 18.10 and 18.11 shall be borne by the Tram Supplier.

19. APPROVALS AND CONSENTS

19.1 Wherever in this Agreement the Tram Inspector is required to make any determination or to exercise his discretion by the giving of decisions, opinions or consents or to express satisfaction or approval or otherwise take any action, the Tram Inspector shall exercise such discretion fairly and reasonably within the terms of this Agreement (save where this Agreement expressly states that he is to have absolute discretion), and having regard to all the circumstances.

19.2 No act or omission of the Tram Inspector, the Client, the Client's Representative or any of the Client Parties shall, except as otherwise expressly provided in this Agreement:

19.2.1 in any way relieve or absolve the Tram Supplier from, modify, or act as a waiver of, any liability, responsibility, obligation or duty under this Agreement; or

19.2.2 in the absence of an express order or authorisation under Clause 20 (*Changes*) constitute or authorise a Client Change.

19.3 Any approval, consent or certificate given or issued by the Client or the Tram Inspector in accordance with this Agreement shall take effect in accordance with its terms, including under Clause 23 (*Mock Up*), but shall not relieve the Tram Supplier from any liability to the Client arising out of, or connected with the performance or non-performance of the Tram Supplier's obligations under this Agreement, except that the issue of an approval, consent or certificate shall constitute discharge by the Tram Supplier of its obligation to obtain such approval, consent or certificate.

19.4 Notwithstanding any other provision of this Agreement, the Tram Supplier undertakes that it shall not accept any instructions from any third party which, if implemented would cause a variation to any term of this Agreement unless:

19.4.1 the Client has in its absolute discretion given its prior written consent to such instructions; or

TIE00899939_0076

19.4.2 the acceptance of instructions is required by the provisions of any applicable Law, in which case the Tram Supplier undertakes to immediately give notice to the Client of the acceptance of such instructions.

19.5 All certificates to be issued under this Agreement shall be issued in multiple with a copy being sent by the Tram Inspector to each of the Client's Representative, **tie** and the Tram Supplier's Representative.

20. CHANGES

Client Changes

20.1 Unless expressly stated in this Agreement or as may otherwise be agreed by the Parties, Client Changes shall be dealt with in accordance with this Clause 20 (*Changes*). If the Client requires a Client Change, it must serve a Client Notice of Change on the Tram Supplier.

20.2 A Client Notice of Change shall:

20.2.1 set out the proposed Client Change in sufficient detail to enable the Tram Supplier to calculate and provide an Estimate in accordance with Clause 20.4;

20.2.2 require the Tram Supplier to provide the Client within 18 days of receipt of the Client Notice of Change with an estimate in accordance with Clauses 20.4 and 20.6 ("**Estimate**") and specify whether any competitive quotes are required; and

20.2.3 set out how the Client wishes to pay or be reimbursed (as the case may be) for the proposed Client Change.

20.3 If, on receipt of the Client Notice of Change, the Tram Supplier considers (acting reasonably) that the Estimate required is too complex to be completed and returned to the Client within 18 Business Days, then the Tram Supplier shall, within 5 Business Days of receipt of such Client Notice of Change, deliver to the Client a request for a reasonable extended period of time for return of the Estimate, such extended period to be agreed by the Parties, both acting reasonably.

20.4 As soon as reasonably practicable, and in any event within 18 Business Days after having received a Client Notice of Change (or such longer period as may have been agreed by the Parties pursuant to Clause 20.3 where extensive engineering / design work is required), the Tram Supplier shall deliver to the Client the Estimate. The Estimate shall include the opinion of the Tram Supplier (acting reasonably) on:

TIE00899939_0077

20.4.1 whether relief from compliance with any of its obligations under this Agreement is required during or as a result of the implementation of the proposed Client Change;

20.4.2 any impact on the performance of the Tram Works and changes required to be made to the Tram Requirements Specification;

20.4.3 any impact on the Tram Manufacturing and Delivery Programme, and any requirement for an extension of time;

20.4.4 any amendment required to this Agreement as a result of the implementation of the proposed Client Change,

20.4.5 the proposed method of delivery of the proposed Client Change;

20.4.6 proposals to mitigate the impact of the proposed Client Change;

20.4.7 any Consents, or changes to existing Consents, which are required as a result of the implementation of the Client Change;

20.4.8 any increase or decrease in any sums due to be paid to the Tram Supplier (including the value of any Milestone Payments and the scheduling of such Milestone Payments) as a result of the implementation of the proposed Client Change; and

20.4.9 any impact or likely impact on the performance of the Mobilisation Services or the Services under the Tram Maintenance Agreement (as those expressions are defined in the Tram Maintenance Agreement), any changes required to be made to the Tram Maintenance Programme and/or the Tram Maintenance Specification (as those expressions are defined in the Tram Maintenance Agreement) and any changes required to be made to any of the Tram Documentation.

20.5 The valuation of any Client Changes made in compliance with this Clause 20 (*Changes*) shall be added to or deducted from the sums due to be paid to the Tram Supplier as the case may be, and shall be ascertained by the Client by measurement and/or valuation based upon the value of the resources and labour employed thereon taking into account the type of work to be carried out, the location that such work is to be carried out and typical prices in the market for such labour and/or components to be used, so as to ensure that the measurement or valuation is at fair rates and/or prices.

20.6 The Tram Supplier shall use all reasonable endeavours to include in the Estimate evidence demonstrating that:

TIE00899939_0078

20.6.1 the Tram Supplier has used all reasonable endeavours to minimise (including by the use of competitive quotes where appropriate) any increase in costs and to maximise any reduction of costs;

20.6.2 the Tram Supplier has, where required by the Client and practicable, sought competitive quotes from persons other than the Tram Supplier Parties in pursuance of its obligation under Clause 20.6.1 above;

20.6.3 the Tram Supplier has investigated how to mitigate the impact of the Client Change; and

20.6.4 the proposed Client Change will, where relevant, be implemented in the most cost-effective manner, including showing, where reasonably practicable, that when any expenditure is incurred relevant Changes in Law that are foreseeable at the time of consideration of the specific Client Change and which relate to that Client Change have been taken into account by the Tram Supplier.

20.7 If the Tram Supplier does not intend to use its own resources to implement any proposed Client Change, it shall:

20.7.1 demonstrate that it is appropriate to subcontract the implementation of such Client Change; and

20.7.2 comply with Good Industry Practice with the objective of ensuring that it obtains best value for money when procuring any supplier or deliverable required in relation to the proposed Client Change.

20.8 As soon as reasonably practicable after the Client receives the Estimate, the Parties shall discuss and agree the issues set out in the Estimate. From such discussions the Client may modify the Client Notice of Change, and the Client may require the Tram Supplier to seek and evaluate competitive tenders (to the extent not already sought). In each case the Tram Supplier shall, as soon as practicable, and in any event not more than 15 Business Days after receipt of such modification, notify the Client of any consequential changes to the Estimate.

20.9 If the Parties cannot agree on the contents of the Estimate, then either Party may refer the Estimate for determination in accordance with the Dispute Resolution Procedure (unless the Client Notice of Change has already been withdrawn) provided that the Tram Supplier shall not be obliged to implement any proposed Client Change where:

TIE00899939_0079

20.9.1 the Client does not have the legal power or capacity to require the implementation of such proposed Client Change; or

20.9.2 implementation of such proposed Client Change would

20.9.2.1 be contrary to Law;

20.9.2.2 not be technically feasible;

20.9.2.3 substantially and materially increase the probability of a substantial non-compliance with this Agreement by the Tram Supplier; and/or

20.9.2.4 be outwith the specific competence of the Tram Supplier either in performing the activity required by the Client Change or in supervising a Tram Supplier Party to carry out the activity required by the Client Change.

20.10 As soon as reasonably practicable after the contents of the Estimate have been agreed or determined pursuant to the Dispute Resolution Procedure or where a Client Change has led to irrevocable withdrawal of a Consent, the Client shall:

20.10.1 issue a Client Change Order ; or

20.10.2 withdraw the Client Notice of Change in which case the Client shall pay to the Tram Supplier the reasonable costs incurred by the Tram Supplier in complying with this Clause 20 (*Changes*) in relation to that Client Notice of Change.

For the avoidance of doubt, the Tram Supplier shall not commence work until instructed through receipt of a Client Change Order.

20.11 If the Client does not issue a Client Change Order within 28 Business Days of the contents of the Estimate having been agreed or determined pursuant to Clause 20.10, then the Client Notice of Change shall be deemed to have been withdrawn.

20.12 Where the Parties cannot agree on the content of an Estimate, and it is deemed by the Client (acting reasonably) that the proposed Client Change is urgent and/or has a potential significant impact on the Tram Manufacturing and Delivery Programme, the Client shall, acting reasonably, determine a provisional Estimate and the Tram Supplier shall, subject to Clause 20.9, carry out the proposed Client Change in accordance with such provisional Estimate and a Client Change Order shall be deemed to have been served on the Tram Supplier by the Client. Either Party may refer the provisional Estimate for determination in accordance with the

TIE00899939_0080

Dispute Resolution Procedure provided that such referral shall not allow the Tram Supplier to refuse to carry out such proposed Client Change.

Restrictions on Entitlements to Relief for a Client Change

20.13 The Tram Supplier shall not be entitled to any extension of time, payment or relief in respect of any Client Change if and to the extent that the Tram Supplier is in breach of this Agreement.

20.14 If, having received instructions from the Client or the Client's Representative, the Tram Supplier considers that compliance with those instructions would amount to a Client Change, then the Tram Supplier shall comply with the instruction when it is confirmed in writing and shall within 10 Business Days of any instructions being received, notify the Client of the same, such notification to include an estimate pursuant to Clause 20.12. From the date of receipt by the Client of such Estimate, Clause 20.12 shall be deemed to apply mutatis mutandis to the work carried out by the Tram Supplier in complying with such instruction. If it is agreed by the Parties or determined pursuant to the Dispute Resolution Procedure that a Client Change would arise if the instructions were complied with (either Party being entitled to refer the matter to the Dispute Resolution Procedure if the matter has not been agreed within 10 Business Days of the estimate being received by the Client), then the Client may proceed with the instruction in accordance with this Clause 20 (*Changes*).

20.15 Any failure by the Tram Supplier to notify the Client within 10 Business Days of instructions being received that it considers that compliance with such instructions from the Client or the Client's Representative would amount to a Client Change shall constitute an acceptance by the Tram Supplier that any compliance with the Client's or the Client's Representative's instructions shall be without cost to the Client and without any entitlement to any extension of time or other relief.

20.16 Any failure by the Tram Supplier to notify the Client within 120 Business Days of becoming aware of any other matter or occurrence which could amount to a Client Change shall constitute an acceptance by the Tram Supplier that in being instructed to deal with such matter or occurrence as a Client Change, the Tram Supplier shall not be entitled to any costs, extension of time or other relief in respect of such Client Change.

TIE00899939_0081

Change Control Register

20.17 The Tram Supplier shall maintain a change control register which shall detail the status and give summary information on all withdrawn, potential and confirmed variations under this Agreement.

21. TRAM SUPPLIER CHANGES

21.1 Within 10 Business Days of the Tram Supplier becoming aware of the need or desirability for a variation to the Tram Works, the Tram Supplier shall notify the Client of the reasons for such variation and make proposals for the proposed variation in writing. The Client shall be free to accept or reject any proposed variation as the Client thinks fit, and the Client shall determine whether such proposal is dealt with in accordance with Clause 21.2 or Clause 21.3.

21.2 If the Client wishes to proceed with a variation proposed by the Tram Supplier, the Client shall serve a Client Notice of Change on the Tram Supplier and Clauses 20.2 to 20.17 shall be adhered to by the Client and the Tram Supplier provided that:

21.2.1 the Client may require that there be a reduction to the Tram Price if such change will result in lower costs for the Tram Supplier; or

21.2.2 in the event that the proposed Tram Supplier change is of benefit only to the Tram Supplier any anticipated increase to the costs of the Tram Supplier resulting from any change requested by the Tram Supplier pursuant to Clause 21.1, shall not result in a variation to the Tram Price.

21.3 If the Tram Supplier considers that a change could effect a saving of £20,000 (as Indexed) or more, the Tram Supplier shall propose such change in accordance with Clause 21.1 and the Tram Supplier's proposal shall be accompanied by a value engineering report which shall include:

21.3.1 a whole life cost analysis in respect of each element of (i) the Tram affected by the proposed change and/or (ii) any additional works proposed to be carried out in order to effect the proposed change;

21.3.2 option appraisals and reasoned arguments to demonstrate why any particular systems, equipment, materials and the like should be selected in preference to others for incorporation into the Tram Works, taking into account the operational life of the Tram; or

TIE00899939_0082

21.3.3 the Tram Supplier's proposals for the lump sum reduction to the contract price in respect of such proposal.

The Client may accept such proposal at its entire discretion and its decision in this respect shall be final and binding. If the proposed change is accepted, the reduction to the Tram Price that is anticipated as arising as a result of such change shall be shared between the Client and the Tram Supplier on a 50:50 basis and the Tram Supplier's share (50% of the cost savings) will be applied to the corresponding payment Milestone or in a financially neutral way.

22. ADDITIONAL TRAMS

22.1 The Client may, by providing the Tram Supplier with a written notice or notices, order Additional Trams with related Spare Parts and Special Tools ("**Additional Trams Order**") from the Tram Supplier on the following terms:

22.1.1 if the Client places an Additional Trams Order or Orders for a maximum total of 4 Additional Trams before 17 months have expired from the date of execution of this Agreement, then the price for such Additional Trams Order or Orders shall be as set out in Schedule 19 (*Additional Trams*);

22.1.2 if the Client places an Additional Trams Order or Orders for a maximum total of 8 Additional Trams (including any Additional Trams ordered under Clause 22.1) after 17 months have expired from the date of execution of this Agreement, then the price and indexation mechanism for such Additional Trams Order or Orders which is set out in Schedule 19 (*Additional Trams)* shall be applied.

22.2 Any necessary changes to this Agreement arising out of any Additional Trams Orders shall be agreed by the Parties (both acting reasonably and in good faith).

23. MOCK-UP

23.1 Mock-Up

23.1.1 The Tram Supplier shall prepare a mock-up of the Tram in accordance with this Clause 23 (*Mock-Up*). The Tram Supplier has a target date for completion of the mock-up as shown in part 1 of Schedule 4 (*Tram Manufacturing and Delivery Programme*), and recognises and acknowledges the need for its participation in the process of reviewing and commenting upon the mock-up to be carried out expeditiously and regularly as the design and fabrication of the mock-up proceeds. The Client and **tie** will be invited (and will be expected) to make periodic inspections

TIE00899939_0083

at the premises where the mock-up is being fabricated during construction of the mock-up and, subject to the following terms of this Clause 23 (*Mock-Up*), to make comments. Upon completion of the mock-up, the Client and **tie** shall be invited to make further inspections and meetings will be held to discuss and resolve the Client's and **tie**'s comments upon the final presentation of the mock-up, provided that no new comments shall be made after the expiry of 20 Business Days from the date upon which the Tram Supplier notifies the Client and **tie** that the mock-up is complete.

23.1.2 The mock-up shall be prepared in accordance with the requirements of section 2 of the Tram Requirements Specification. The mock-up will be used to demonstrate, subject to the provisions of this Clause 23 (*Mock Up*):

23.1.2.1 compliance with the Tram Employer's Requirements;

23.1.2.2 compliance with the Rail Vehicle Accessibility Regulations 1998 (as amended from time to time) and Railway Safety Publication 2;

23.1.2.3 cab and saloon interior and external styling, livery design and provision of advertising space;

23.1.2.4 interior layout, including:

(a) seat spacing, dimensions and design;

(b) wheelchair positions;

(c) aisle widths;

(d) window arrangement;

(e) luggage racks;

(f) hand rails;

23.1.2.5 cab interior and controls layout;

23.1.2.6 passenger information displays; and

23.1.2.7 passenger emergency communication units.

TIE00899939_0084

23.2 Client's rights to comment and approve

23.2.1 The Client's and/or **tie**'s rights to make comments upon and approve the mock-up shall be subject to the time limits set out in Clause 23.1 above, and to the following further provisions.

23.2.2 The Client and/or **tie** shall act reasonably in approving the mock-up, and shall not unreasonably disapprove any aspect of the design which is materially similar to that contained in the relevant drawings and colour renderings listed or described in Schedule 23 (*Tram Supplier's Proposals*). Without prejudice to this, the Client may not require any changes in respect of the following:

23.2.2.1 overall vehicle dimensions (length, width, height);

23.2.2.2 heating, ventilation and air conditioning air distribution system;

23.2.2.3 door sizes; and

23.2.2.4 any dimension which would change the Developed Kinematic Envelope and in particular the length of the Tram nose.

The Client and/or **tie** shall not require any changes to the Trams which will prevent or make materially more difficult compliance with the Disability Discrimination Act 1995, the Rail Vehicle Accessibility Regulations 1998 (as amended), or any other Legislation.

23.2.3 The Client and/or **tie** may require reasonable changes in respect of exterior cab styling (provided due consideration has been given to the Developed Kinematic Envelope, passenger compartment, viewing angles and the like and that such changes shall not impact upon the structural design of the Tram seating arrangement, handrail location, seat selection, interior and exterior colour schemes).

23.2.4 Notwithstanding anything else in this Clause 23.2, the Client and/or **tie** may not require changes which would materially change the intent of the Employer's Requirements unless such change is instructed as a Client Change under Clause 20 (*Changes*).

23.2.5 The approval by the Client, **tie** or the Tram Inspector of the mock-up shall not in any way relieve the Tram Supplier of any of its obligations under this Agreement.

TIE00899939_0085

23.3 Design finalisation and use of mock-up for display purposes

23.3.1 Upon such completion, the Tram Supplier shall incorporate the agreed design changes into the final design of the Tram, and shall make such changes to the mock-up as are required to reflect the agreed changes.

23.3.2 The Tram Supplier shall, provided it no longer reasonably requires the mock-up for the purposes of finalisation of the design of the Tram, make the mock-up available to **tie**, upon reasonable notice by **tie** to the Tram Supplier, for the purposes of display to the public at a venue in Edinburgh selected by **tie** and thereafter at a site to be jointly agreed and secured by the Parties.

24. AUDIT AND INSPECTION

24.1 The Tram Supplier shall supply such financial information relating to the Tram Supplier and its Affiliates as may from time to time be reasonably requested by the Client within 10 Business Days of such request.

24.2 In relation to the accounts of the Tram Supplier, and its Affiliates it declares that it is a Corporation traded on the Madrid Stock Market with which it is obliged to register and publish the accounting records (balance sheet, profit and loss account, etc) and refer financial and commercial information to the stock market from time to time abiding by the rules of the CNMV (Spanish National Commission of Stocks and Commercial Values) and the LSA (Spanish companies law). Thus, this financial information will be public and available for the Client.

24.3 The Tram Supplier shall promptly provide the Client and the Client Parties with all reasonable co-operation and assistance in relation to any inspection including without limitation:

24.3.1 providing all information reasonably required by the Client and/or the Client Parties for the purposes of its inspection;

24.3.2 providing a reasonable number of copies of any documents or records reasonably requested by, the Client and/or the Client Parties; and

24.3.3 complying with the Client's reasonable requests for access to personnel engaged in the Tram Supplier's performance of this Agreement. If the Client has justified suspicions that the Tram Supplier could enter into an Insolvency Event, a representative of the Financial Department of the Tram Supplier shall meet, when required by the Client at

TIE00899939_0086

an agreed location with the financial information that is in the Public Registered Offices in Spain and give a detailed analysis of such financial Information.

24.4 The Tram Supplier shall bear the costs of any inspection where such inspection is the consequence of or uncovers a Tram Supplier Default.

24.5 The Tram Supplier acknowledges and agrees that **tie**, CEC and certain Relevant Authorities from time to time require whether by virtue of Law, regulation or otherwise, to provide reports, returns and to carryout audits and accordingly the Tram Supplier agrees to provide assistance to the extent required by **tie**, CEC and such Relevant Authorities from time to time. Each of the parties shall bear their own costs of such information provision and/or audits.

24.6 The Client shall have the right to exercise its rights of audit and inspection set out in this Clause 24 (*Audit and Inspection*) for a period of 6 years from expiry or termination of this Agreement.

24.7 The Tram Supplier shall for at least 6 years following expiry or termination of this Agreement keep safely and in good order such technical and financial information as is necessary for the Client to carry out its rights to audit and inspect in accordance with this Clause 24 (*Audit and Inspection*).

25. QUALITY ASSURANCE

25.1 The Tram Supplier shall at all times:

25.1.1 utilise a Project Quality Assurance Programme that is compliant with EN ISO 9001:2000; and

25.1.2 comply with the Project's health and safety and environmental management requirements and policies applicable to the Edinburgh Tram Network and by Law and Legislation (as such requirements and policies are described in Schedule 2, (*Employer's Requirements)* and as may be notified by the Client to the Tram Supplier from time to time) in the performance of its obligations under this Agreement.

25.2 The Tram Supplier shall promptly rectify any non-conformities, including in the Deliverables, with the Project Quality Assurance Programme identified during the course of an assessment by the Tram Inspector or the Client or any of their appointed representatives in a timely manner.

TIE00899939_0087

25.3 Compliance with the Project Quality Assurance Programme shall not relieve the Tram Supplier from any of its other duties, obligations or liabilities under this Agreement.

25.4 The Tram Supplier shall appoint (or shall procure the appointment of) a quality manager as soon as reasonably practicable following the Effective Date. The identity of the quality manager (and any replacement) shall be subject to the approval of the Client's Representative (such approval not to be unreasonably withheld or delayed).

25.5 The quality manager shall:

25.5.1 ensure the effective operation of the quality systems under the Project Quality Assurance Programme;

25.5.2 audit the quality systems at regular intervals and report the findings to the Client's Representative;

25.5.3 review all quality systems at intervals agreed with the Client's Representative to ensure their continued suitability and effectiveness; and

25.5.4 liaise with the Client's Representative on all matters relating to quality management.

26. PROGRAMMING OF TRAM DESIGN, MANUFACTURE, DELIVERY, TESTING AND COMMISSIONING

The Tram Supplier shall:

26.1 undertake and programme all activities, so as to ensure the timeous delivery of Trams in accordance with the Tram Manufacturing and Delivery Programme;

26.2 at the end of each Reporting Period (or as otherwise agreed by the Parties), re-issue electronically (and if requested in paper format) the Tram Manufacturing and Delivery Programme to the Client's Representative showing the key activities completed to date against the original Tram Manufacturing and Delivery Programme incorporating:

26.2.1 an explanation of any failure to achieve any activities referred to in the Tram Manufacturing and Delivery Programme by the date or dates originally set and proposals setting out the steps taken or to be taken to meet, in so far as reasonably practicable, or otherwise to mitigate the adverse effects on the requirements of the Tram Manufacturing and Delivery Programme;

TIE00899939_0088

26.2.2 details of other circumstances which have or may delay manufacture or delivery of the Trams in accordance with the Tram Manufacturing and Delivery Programme and proposals setting out the steps taken or to be taken to meet, in so far as reasonably practicable, or otherwise to mitigate the adverse effects on the requirements of the Tram Manufacturing and Delivery Programme; and

26.2.3 details of any proposed changes to the Tram Manufacturing and Delivery Programme that the Tram Supplier reasonably considers necessary, such changes to be agreed, subject to Clause 27.2, in accordance with Clause 20 (*Changes*);

26.3 provide all necessary support to the Client required for the testing and commissioning of the Trams, including:

26.3.1 provision of testing managers and technicians based in Edinburgh throughout the delivery and testing of the Trams;

26.3.2 full logistic support for the despatch of urgent and routine Spare Parts required throughout the delivery and testing of the Trams;

26.3.3 provision of all documentation authors and administrative support necessary for the production and delivery to the Client of Tram Documentation.

26.3.4 promptly following request by the Client provide such further information to clarify and substantiate any information provided pursuant to Clause 26.2 and Clause 26.3; and

26.3.5 take all reasonable steps to mitigate the effects of any delay to its progress in accordance with the Tram Manufacturing and Delivery programme.

27. ACCELERATION

27.1 If for any reason which does not entitle the Tram Supplier to an extension of time, the rate of progress of the Tram Works is at any time, in the opinion of the Client's Representative, whose opinion shall be neither unreasonable nor expressed vexatiously and with the agreement of the Tram Supplier (agreement not to be unreasonably delayed or withheld), too slow to ensure substantial completion in accordance with the Tram Manufacturing and Delivery Programme, or any previously agreed revised time for completion of the Tram Works agreed under Clause 27.2, the Client's Representative shall notify the Tram Supplier in writing and the Tram Supplier shall thereupon take such steps as are necessary and to which the Client's Representative may consent to expedite the progress so as substantially to complete the Tram

TIE00899939_0089

Works in accordance with the Tram Manufacturing and Delivery Programme, such consent not to be unreasonably delayed or withheld. The Tram Supplier shall not be entitled to any additional payment for taking such steps. For the avoidance of doubt, any dispute arising out of this sub-clause is capable of referral through the Dispute Resolution Procedure.

27.2 Where the Client desires either:

27.2.1 a date for completion of certain of the Tram Supplier's obligations under this Agreement earlier than the date set out in the Tram Manufacturing and Delivery Programme current at the date of issue of the preliminary instruction under Clause 27.3; or

27.2.2 to have certain of the Tram Works completed by the relevant date set out in the Tram Manufacturing and Delivery Programme where, following delays or stoppage to programme for whatever reason, the Tram Works would not be so completed in the absence of any acceleration or re-sequencing arrangements; or

27.2.3 to obviate the necessity for, or to order the cancellation of, or a reduction in the length of, any extension of time being fixed under Clause 47 (*Relief Events);*

the Client's Representative may issue a preliminary instruction under Clause 27.3.

27.3 If the Client's Representative issues a preliminary instruction to the Tram Supplier to accelerate the carrying out or alter the sequence and timing of any work to be executed under the provisions of this Agreement, the Client's Representative shall, in such instruction set out the exact nature of the requirements of the Client with regard to the Tram Manufacturing and Delivery Programme as referred to in Clause 27.2 for which the preliminary instruction has been issued.

27.4 If the Tram Supplier makes a reasonable objection to such an instruction, the preliminary instruction shall either be withdrawn or so varied as to meet such objection and may then be re-issued by the Client's Representative.

27.5 As soon as reasonably practicable after receipt of the preliminary instruction (or after receipt of a preliminary instruction re-issued under Clause 27.4) the Tram Supplier shall inform the Client's Representative in writing in respect of the proposed instruction:

27.5.1 of the amount of any additional cost to which the Tram Supplier should be entitled as a result of compliance with the instruction when issued by the Client's Representative subject to Clause 27.3; or

TIE00899939_0090

27.5.2 that it is not reasonably practicable to state such a sum and that the cost to the Client of compliance by the Tram Supplier will therefore have to be ascertained in accordance with Clause 20 (*Changes*); and

27.5.3 of the earlier date for completion of the relevant aspect of the Tram Works and the unsequential amendment to the Tram Manufacturing and Delivery Programme; or

27.5.4 of the extent to which an extension of time that would otherwise be fixed under Clause 47 (*Relief Events*) can be cancelled or reduced and the date for completion of the relevant aspect of the Tram Works which as a result will be or become the date for completion of the activity in the Tram Manufacturing and Delivery Programme for all the purposes of this Agreement.

27.6 If on receipt of the information given to the Client's Representative under Clause 27.5 the Client wishes to pay the amount referred to in Clause 27.5.1 and to accept the new date for completion of the Tram Works stated by the Tram Supplier pursuant to Clause 27.5.3, the Client shall cause the Client's Representative to issue an instruction:

27.6.1 confirming the details of the acceleration or alteration of sequence or timing required; and

27.6.2 fixing the new date for completion of the relevant aspect of the Tram Works and the amount to which Clause 27.5.1 refers shall be included as if it were a variation.

27.7 Following any instruction under Clause 27.6 the Tram Supplier shall revise the Tram Manufacturing and Delivery Programme in accordance with the terms of Clause 26 (*Programming of Tram Design, Manufacture, Delivery, Testing and Commissioning*).

28. PRE-DELIVERY INSPECTIONS AND FACTORY ACCEPTANCE TESTS

28.1 The Tram Supplier acknowledges and agrees that **tie**, the Client and the Tram Inspector shall be involved in inspecting the Trams at various stages of the manufacturing process.

28.2 The Tram Supplier shall:

28.2.1 supply to the Client and **tie** photographs in a suitable digital format setting out each key stage of the Tram build process;

28.2.2 deliver the Trams to the delivery point designated by the Client in the Depot in accordance with the Tram Manufacturing and Delivery Programme;

TIE00899939_0091

28.2.3 notify the Tram Inspector and the Client's Representative of the expected delivery date not less than 30 days prior to such delivery date and provide the Tram Inspector and the Client's Representative with a quality control report before transporting any Tram to the Depot;

28.2.4 allow the Tram Inspector to inspect each Tram before it leaves the Tram Supplier's premises to be transported to the Depot; and

28.2.5 not transport a Tram to the Depot until the Tram Inspector has issued the Factory Acceptance Type Test Certificate and a Factory Acceptance Routine Test Certificate in respect of the Tram to be despatched and the Tram Supplier has confirmed with the Client that the Depot is ready to accept delivery of the Tram

28.3 The Tram Inspector shall inspect and the Tram Supplier shall provide all assistance requested by the Tram Inspector to enable it to so inspect:

28.3.1 each Tram before it is despatched to the Depot in accordance with the Factory Acceptance Routine Tests; and

28.3.2 specified Tram or Trams (identified in the Factory Acceptance Type Tests) before they are despatched to the Depot in accordance with the Factory Acceptance Type Tests.

28.4 The Factory Acceptance Type Test Certificate shall not be issued in respect of any Tram until all of the Factory Acceptance Type Tests have in the reasonable opinion of the Tram Inspector been satisfactorily completed.

28.5 A Factory Acceptance Routine Test Certificate shall not be issued in respect of any Tram until:

28.5.1 the Factory Acceptance Type Test Certificate has been issued; and

28.5.2 the Factory Acceptance Routine Tests in respect of that Tram have in the reasonable opinion of the Tram Inspector been satisfactorily completed.

28.6 If, in the reasonable opinion of the Tram Inspector, either the Factory Acceptance Routine Test and/or the Factory Acceptance Type Tests have not been satisfactorily completed, the Tram Inspector may issue a Tram Rejection Notice, identifying the Testing Failures and the Tram Supplier shall propose a rectification plan and period for rectification for agreement by the Tram Inspector (such agreement not to be unreasonably withheld or delayed).

TIE00899939_0092

28.7 Once the Tram Supplier has (at its own cost) rectified the failures identified in the Tram Rejection Notice in accordance with the rectification plan and within the rectification period, the Tram Supplier shall resubmit the Tram for inspection in accordance with the relevant Factory Acceptance Tests and the process set out in Clauses 28.3 to 28.7 shall continue until the Tram Inspector issues a Factory Acceptance Type Test Certificate and/or a Factory Acceptance Routine Test Certificate.

28.8 Notwithstanding any other provision of this Clause 28 (*Pre-Delivery Inspections and Factory Acceptance Tests*), once the Tram Inspector has issued a Factory Acceptance Type Test Certificate:

28.8.1 no further Factory Acceptance Type Tests shall be conducted (unless any one or more of such tests are also Factory Acceptance Routine Tests); and

28.8.2 there shall be no further requirement for the Tram Supplier to obtain a Factory Acceptance Type Test Certificate in respect of any further Tram.

29. DELIVERY

29.1 The Tram Supplier shall:

29.1.1 deliver the Trams to the point of delivery designated by the Client at the Depot;

29.1.2 use every reasonable means available to it in delivering the Trams pursuant to Clause 29.1.1, to prevent any of the roads or bridges communicating with or en route to the Depot being subjected to extraordinary traffic within the meaning of applicable legislation and specifically the Roads (Scotland) Act 1984 (as amended) by any traffic of the Tram Supplier or any Tram Supplier Party;

29.1.3 be responsible for the costs associated with the strengthening of any bridges or altering or improving any road communicating with or on route to the Depot to facilitate the movement and delivery of the Trams to the Depot;

29.1.4 be solely responsible for unloading the Trams at the point of delivery;

29.1.5 indemnify the Client and keep the Client indemnified against any and all Losses suffered or incurred by the Client arising out of or in connection with the movement and delivery of the Trams to the Depot, the unloading, loading or other removal or storage of that Tram at the point of delivery; and

29.1.6 be responsible for obtaining such export and import licences and other consents in relation to the Trams as are from time to time required and, if required by the Client will make those licences and consents available to the Client prior to the relevant shipment.

29.1.7 if, notwithstanding Clause 29.1.2, any damage occurs to any bridge or road communicating with or on the route to the Depot arising from the transport of the Trams, notify the Client's Representative as soon as the Tram Supplier becomes aware of such damage or as soon as the Tram Supplier receives any claim from the authority entitled to make such claim. For the avoidance of doubt, the Client shall not be liable for any costs charges or expenses in respect thereof in relation thereto.

29.2 In relation to all Tram delivery dates set out in the Tram Manufacturing and Delivery Programme, time shall be of the essence (save in circumstances where an extension of time is granted pursuant to the express terms of this Agreement).

30. TRAM DELIVERY TESTS AND CERTIFICATION

30.1 Tram Delivery Tests shall be conducted by the Tram Supplier on all Trams on delivery (or as soon as reasonably practicable thereafter) to the Depot and witnessed by the Tram Inspector.

30.2 The Certificate of Tram Delivery in respect of any Tram shall not be issued before:

30.2.1 all Tram Documentation has been received in accordance with the Tram Documentation Delivery Programme;

30.2.2 all of the Tram Delivery Tests in respect of that Tram have been satisfactorily completed;

30.2.3 the Tram Inspector is satisfied that the Tram conforms with the Tram Requirements Specification and all other requirements of this Agreement; and

30.2.4 in respect of the twenty seventh Certificate of Tram Delivery only, the Reliability Bond has been put in place in accordance with Clause 44 (*Bonds and Collateral Warranty*);

(together, the "**Tram Delivery Requirements**").

30.3 If the Tram fails to meet the Tram Delivery Requirements then the Tram Inspector shall issue a Tram Rejection Notice, identifying the Testing Failures and the Tram Supplier shall propose a rectification plan and period for rectification for agreement by the Tram Inspector (such

TIE00899939_0094

agreement not to be unreasonably withheld or delayed). Once the Tram Supplier has rectified the failures identified in the Tram Rejection Notice in accordance with the rectification plan and within the rectification period, the Tram Supplier shall resubmit the Tram to be tested in accordance with the Tram Delivery Tests and the process set out in this Clause 30 (*Tram Delivery Tests and Certification*) shall be repeated until the Tram Inspector issues a Certificate of Tram Delivery in respect of the rejected Tram.

30.4 The Tram Inspector shall have the right to require the Tram Supplier to repeat any Tram Delivery Test if:

30.4.1 the Tram Supplier has been unable to provide to the Tram Inspector such written evidence, details or other information as the Tram Inspector may reasonably require to evidence that the Tram Delivery Tests have been properly conducted and that the conditions for the issue of a Certificate of Tram Delivery set out in this Clause 30 (*Tram Delivery Tests and Certification*) are satisfied; or

30.4.2 the Tram Inspector is not reasonably satisfied that:

30.4.2.1 any part of the Tram Delivery Test has been or is being conducted properly; or

30.4.2.2 following any part of the Tram Delivery Test having been conducted, a Tram, in any respect, satisfies the conditions for the issue of such a Certificate of Tram Delivery.

31. TRAINING, COMMISSIONING, TESTING AND CERTIFICATION

31.1 The Tram Supplier, the Client, **tie** and the Operator shall within 12 months of the Commencement Date (each party acting reasonably and in good faith) agree the Training Programme and the detailed implementation of the Training Programme. The Tram Supplier shall implement the Training Programme in accordance with this Clause 31 (*Training, Commissioning, Testing and Certification*) and the terms of the Training Programme.

31.2 The Tram Supplier acknowledges that **tie** shall procure that on the date falling no later than two weeks prior to the date on which the first Tram is scheduled for delivery the Operator shall provide 4 drivers (in each case appropriately qualified) ready to commence the Training Programme and once trained participate in the Tram Delivery Tests and Tram Commissioning Tests. The Tram Supplier further acknowledges that **tie** shall procure that on the date on which the first Tram has been issued with a Certificate of Tram Delivery there are a further 2 drivers and 10 maintenance staff (in each case appropriately qualified) ready to commence the

TIE00899939_0095

Training Programme and, if required, once trained participate in the Tram Delivery Tests and Tram Commissioning Tests.

31.3 The Client shall procure that, for the purposes of the Tram Commissioning Tests the following are made available to the Tram Supplier:

31.3.1 the Depot (to the extent necessary for the Tram Commissioning Tests); and

31.3.2 the Test Track, power supplies and other facilities, as required to meet the Tram Manufacturing and Delivery Programme;

31.4 The Tram Supplier acknowledges that **tie** shall procure reasonable assistance from the Operator in relation to the provision of operational staff, including drivers, (subject to appropriate training by the Tram Supplier pursuant to Clause 31.2);

31.5 The Tram Supplier and the Client shall, and the Client shall procure that all other relevant Client Parties shall, observe all reasonable requirements of the Operator (as may be notified in writing by **tie** to the Client) during the carrying out of the Tram Commissioning Tests, to use reasonable endeavours to:

31.5.1 preserve health and safety;

31.5.2 protect the Trams against damage; and

31.5.3 avoid unnecessary disruption to the Operator's operations;

31.6 The Tram Supplier shall make available throughout the Tram Commissioning Tests qualified staff to:

31.6.1 conduct, supervise and record the results of all the Tram Commissioning Tests; and

31.6.2 respond to all reasonable enquiries about the condition or performance of the Trams and the major systems, sections, apparatus, equipment, components, internal seating, fixtures and fittings and devices, system configuration, modification status and software version control including all structural, electrical, hydraulic and other major components and assemblies and to rectify any failures of the same;

31.7 Subject to the provision by the Client and **tie** of the requisite operational facilities and staff:

31.7.1 the Tram Supplier shall conduct the Site Commissioning Type Tests and the Client shall conduct the System Integration Type Tests on the first Tram; and

MR

TIE00899939_0096

31.7.2 the Tram Supplier shall conduct the Site Commissioning Routine Tests and the Client shall conduct the System Integration Routine Tests on every Tram.

31.8 Subject to Clause 31.12, the Certificate of Tram Commissioning in respect of a Tram shall not be issued before:

31.8.1 all Tram Documentation has been received in accordance with the Tram Documentation Delivery Programme;

31.8.2 all of the Tram Commissioning Routine Tests in respect of that Tram have been satisfactorily completed; and

31.8.3 the Tram Inspector is satisfied that the Tram is in accordance with the terms of the Tram Requirements Specification and all other requirements of this Agreement,

(together the "**Tram Commissioning Requirements**").

31.9 The Tram Inspector shall issue a certificate ("**Tram Commissioning Type Test Certificate**") when the specified number of Trams (identified in the Tram Commissioning Type Tests) in the reasonable opinion of the Tram Inspector have completed and passed the Tram commissioning type tests ("**Tram Commissioning Type Tests**") as detailed in section 23 of the Tram Employer's Requirements. Notwithstanding any other provisions of this Clause 31 (*Training, Commissioning, Testing and Certification*) no Certificate of Tram Commissioning shall be issued in respect of any Tram until the Tram Supplier has been issued with a Tram Commissioning Type Test Certificate.

31.10 If a Tram does not meet the Tram Commissioning Requirements to the reasonable satisfaction of the Tram Inspector then the Tram Inspector may issue a Tram Rejection Notice, identifying the Testing Failures and the Tram Supplier shall propose a rectification plan and period for rectification for agreement by the Tram Inspector (such agreement not to be unreasonably withheld or delayed). Once the Tram Supplier has (at its own cost) rectified the failures identified in the Tram Rejection Notice in accordance with the rectification plan and within the rectification period, the Tram Supplier shall resubmit the Tram to be commissioned in accordance with the relevant Tram Commissioning Routine Tests and/or Tram Commissioning Type Tests and the process set out in this Clause 31 (*Training, Commissioning, Testing and Certification*) shall be repeated until the Tram Inspector issues a Certificate of Tram Commissioning.

31.11 The Tram Inspector shall have the right to require the Tram Supplier to repeat any Routine Test and/or Type Test if:

TIE00899939_0097

31.11.1 the Tram Supplier has been unable to provide to the Tram Inspector such written evidence, details or other information as the Tram Inspector may reasonably require to evidence that the Tram Commissioning Routine Tests and/or Tram Commissioning Type Tests have been properly conducted and that the conditions for the issue of a Certificate of Tram Commissioning set out in this Clause 31 (*Training, Commissioning, Testing and Certification*) are satisfied; or

31.11.2 the Tram Inspector is not reasonably satisfied that:

31.11.2.1 any part of the Tram Commissioning Routine Test and/or Tram Commissioning Type Test has been or is being conducted properly; or

31.11.2.2 following any part of the Tram Commissioning Routine Test and/or Tram Commissioning Type Test having been conducted, a Tram, in any respect, satisfies the conditions for the issue of such a Certificate of Tram Commissioning.

31.12 Notwithstanding any other provision of this Clause 31 (*Training, Commissioning, Testing and Certification*) once the Tram Supplier has been issued with a Tram Commissioning Type Test Certificate no further Tram Commissioning Type Tests shall be conducted (unless any one or more of such Tram Commissioning Type Tests are also Tram Commissioning Routine Tests);

31.13 Following the issue of the first Certificate of Tram Commissioning, the Tram issued with such a certificate shall be weighed in accordance with part 2 of Schedule 5 (*Payments*).

31A. TRAM PAYMENT MILESTONE CERTIFICATION AND APPROVAL

31A.1 Milestones Payments are detailed in the Milestone Payment Schedule in part 1 of Schedule 5 (*Payments*) of this Agreement and:

(a) the scheduling of those associated with the physical works is shown in the Tram Manufacturing and Delivery Programme in part 1 of Schedule 4 (*Programme*).

(b) the scheduling of those associated with documentation delivery is shown in the Tram Documentation Delivery Programme in part 5 of Schedule 4 (*Programme*).

(c) the scheduling of those associated with training delivery is shown in the Tram Manufacturing and Delivery Programme in part 1 of Schedule 4 (*Programme*).

(d) the scheduling of those associated with system acceptance testing is shown in the Client's Programme; and

TIE00899939_0098

(e) the scheduling of those associated with depot equipment is shown in part 1 of Schedule 5 (*Payment*).

31A.2 The initial Milestone is associated with contract award and is deemed to have been achieved, and therefore application for payment due, upon the Effective Date.

31A.3 Milestones 1, 3, 4, 10 and 66 as set out in part 5 of Schedule 4 (*Programme*) of the Tram Supply Agreement will be approved by the Tram Inspector when the activities referred to are complete in accordance with the Tram Documentation Delivery Programme in part 5 of Schedule 4 and with the requirements of this Agreement. Such approval in writing shall evidence the achievement of each relevant Milestone.

31A.4 Milestones 2, 5, 6, 7, 8, 65 and 67 as set out in part 1 of Schedule 4 (*Programme*)of the Tram Supply Agreement will be approved by the Tram Inspector when the activities referred to are complete in accordance with the Tram Manufacturing and Delivery Programme in part 1 of Schedule 4 (*Programme*) and requirements of this Agreement. Such approval in writing shall evidence the achievement of each Milestone.

31A.5 The process for certification of Tram delivery and Tram commissioning and testing is as set out in Clause 30 (*Tram Delivery Tests and Certification)* which relates to Milestones Payments 9 and 11 to 64 inclusive. The issue of a Certificate of Tram Delivery and issue of a Certificate of Tram Commissioning by the Tram Inspector shall evidence the achievement of each relevant Milestone.

31A.6 Milestones 68 and 69 as set out in part 1 of Schedule 5 (*Payment*) of the Tram Supply Agreement will be approved by the Tram Inspector when the activities referred to are complete in accordance with the Tram Manufacturing and Delivery Programme in part 1 of Schedule 4 (*Programme*)and requirements of this Agreement. Such approval in writing shall evidence the achievement of each relevant Milestone.

31A.7 Milestone 70 relates to T1, for Section D (as defined in the Infraco Contract) of the Infraco Works in accordance with section 23 of the Employer's Requirements and in this regard; the Client shall provide the Tram Supplier with a copy of the written approval of successful completion of T1 issued by **tie** to the Client within 2 Business Days of its issue date. This document shall be deemed to be certification of the achievement of this Milestone.

31A.8 Milestone 71 relates to T2 (as defined in the Infraco Contract), for Phase 1a of the Edinburgh Tram Network, in accordance with section 23 of the Employer's Requirements and in this regard; the Client shall provide the Tram Supplier with a copy of the written approval of

TIE00899939_0099

successful completion of Test T2 issued by **tie** to the Client within 2 Business Days of its issue date. This document shall be deemed to be certification of the achievement of this milestone.

31A.9 Milestone 72 relates to T3 (as defined in the Infraco Contract), for Phase 1a of the Edinburgh Tram Network, in accordance with section 23 of the Employer's Requirements and in this regard; the Client shall provide the Tram Supplier with a copy of the written approval of successful completion of T3 issued by **tie** to the Client within 2 Business Days of its issue date. This document shall be deemed to be certification of the achievement of this Milestone.

31A.10 In the event that the Client fails to transmit **tie's** approval within 2 Business Days, as required by Clause 31A.7 through Clause 31A.9, the certification of the achievement of the Milestone shall be deemed to be the date of **tie's** approval of the System Acceptance Tests T1, T2 and/or T3 as appropriate (T1, T2 and T3 shall have the meaning as defined in the Infraco Contract).

32. REPEATED TESTING AND COMMISSIONING FAILURES

32.1 If at any time four or more Trams have been issued with a Tram Rejection Notice then, unless the Tram Supplier can demonstrate to the reasonable satisfaction of the Client that the causes of such notices have been rectified, the Client may issue a written notice to the Tram Supplier setting out the fact that four or more Trams have been issued with a Tram Rejection Notice and requesting that the Tram Supplier submits a remedy plan in relation to such failure ("**Repeated Failure Notice**") and until such remedy plan is implemented in accordance with this Clause 32 (*Repeated Testing and Commissioning Failures*):

32.1.1 the Tram Inspector shall not issue any further Certificates of Tram Commissioning;

32.1.2 notwithstanding any other provision of this Agreement, the Client shall not be under any obligation to pay any sums due to the Tram Supplier in relation to which:

32.1.2.1 an invoice has been raised but not yet paid; or

32.1.2.2 the Tram Supplier subsequently raises an invoice;

32.1.3 the Client shall not be under any obligation to accept delivery of further Trams and the Tram Supplier shall pay Liquidated Damages where applicable in accordance with Clause 41 (*Liability, Indemnities, Retention and Liquidated Damages*).

32.2 Upon receipt of a Repeated Failure Notice, the Tram Supplier shall promptly propose a remedy plan for agreement by the Tram Inspector, the Client's Representative and **tie's**

TIE00899939_0100

Representative (such agreement not to be unreasonably withheld or delayed) ("**Repeated Failure Remedy Plan**").

32.3 If the Tram Inspector, the Client's Representative and **tie's** Representative agree the Repeated Failure Remedy Plan, the Tram Supplier shall promptly implement, at its own cost and expense, the Repeated Failure Remedy Plan. Provided that the Repeated Failure Remedy Plan has been implemented to the reasonable satisfaction of the Tram Inspector, the Client's Representative and **tie's** Representative:

32.3.1 the Client shall accept delivery of those Trams awaiting to be dispatched to the Depot subject to Clause 28 (*Pre-Delivery Inspections and Factory Acceptance Tests*) and in accordance with Clause 29 (*Delivery*),

32.3.2 the Client shall within 30 days pay all sums due to the Tram Supplier in respect of those invoices raised before the date of the Repeated Failure Notice (save for invoices which are the subject of genuine dispute other than pursuant to Clause 32.1.2); and

32.3.3 the Tram Inspector shall issue a Certificate of Tram Commissioning in respect of those Trams which have passed the relevant tests as a result of the Tram Supplier implementing the Repeated Failure Remedy Plan.

32.4 If the Tram Inspector, the Client's Representative and **tie's** Representative do not agree the Repeated Failure Remedy Plan, the provisions of Clauses 32.1.1 to 32.1.3 shall continue to apply until the date on which an alternative remedy plan is agreed by the Tram Inspector, the Client's Representative and **tie's** Representative (such agreement not to be unreasonably withheld or delayed) and successfully implemented by the Tram Supplier to the reasonable satisfaction of the Tram Inspector, the Client's Representative and **tie's** Representative whereupon the provisions of Clause 32.3 shall apply.

32.5 If the Tram Supplier fails to implement any agreed Repeated Failure Remedy Plan in accordance with its terms then the provisions of Clauses 32.1.1 to 32.1.3 shall continue to apply until the date on which the Tram Supplier implements such Repeated Failure Remedy Plan to the reasonable satisfaction of the Tram Inspector, the Client's Representative and **tie's** Representative whereupon the provisions of Clause 32.3 shall apply

32.6 The Tram Supplier shall not be entitled to any extensions of time to comply with any Milestone or Agreed Delivery Date, as a result of the occurrence of a failure in accordance with this Clause 32 (*Repeated Testing and Commissioning Failures*).

TIE00899939_0101

32.7 Any disputes which arise between the Tram Supplier and the Client's Representative shall be resolved in accordance with the Dispute Resolution Procedure.

32.8 The Client Representative, if requested by the Client, **tie** and any **tie** Party shall be entitled to attend and witness the carrying out of inspections and tests to be performed by the Tram Inspector pursuant to Clauses 28 (*Pre-Delivery Inspections and Factory Acceptance Tests*) to 32 (*Repeated Testing and Commissioning Failures*) (inclusive).

33. TRAM DOCUMENTATION

33.1 The Tram Supplier shall provide to the Client the Tram Documentation in accordance with the Tram Documentation Delivery Programme. The Tram Documentation shall be subject to approval by the Client.

33.2 The Tram Supplier shall until the expiry of the last of:

33.2.1 the Primary Tram Warranty Period in respect of all aspects of the Trams which are not Paint or Finishes or Extended Tram Warranty Parts;

33.2.2 the Paint and Finish Warranty Period in respect of the Paint and Finishes; and

33.2.3 the Extended Tram Warranty Period in respect of the Extended Tram Warranty Parts,

keep the Tram Documentation (held on all media on which such Tram Documentation has been supplied to the Client) current and up to date with (and shall promptly inform the Client of) any changes due to alterations to the Trams made, or authorised, by the Tram Supplier, availability of parts and components, identified faults in existing procedures or other relevant circumstances covered under the relevant warranty provided that the Tram Supplier shall in respect of a defect first identified during any Warranty Period, update the Tram Documentation upon a solution being found notwithstanding that the relevant Warranty Period may have elapsed. If an Identified Defect is notified to the Tram Supplier under a Warranty and is repaired by the Tram Supplier under Warranty, the Tram Supplier shall, as part of the repair process, update the Tram Documentation in relation to the Identified Defect repaired. The Tram Supplier shall update the Tram Documentation upon any changes introduced by the Tram Supplier, which arise as a result of an Client Change or which result from a Change in Law.

33.3 Without prejudice to Clause 33.2, the Tram Supplier shall as soon as reasonably practicable and in any event within 28 days of the occurrence of any relevant event referred to in this

TIE00899939_0102

Clause 33.3, update the Tram Documentation (held on all media on which such Tram Documentation has been supplied to the Client):

33.3.1 if the Tram Requirements Specification is amended after a Certificate of Tram Commissioning is issued in respect of a Tram;

33.3.2 in the event that at any time during the term of this Agreement there are product wide changes to the Trams and for the purposes of this Clause 33.3.2, "product wide changes" shall mean changes made to a Tram or a component or part of a Tram as a result of a modification to a tram, component or part of a tram by the Tram Supplier that has been applied to the Trams; or

33.3.3 where reasonably requested by the Client:

33.3.3.1 during the period from the date on which the first Tram delivered is issued with a Certificate of Tram Commissioning until the date on which the last Tram to be issued with a Certificate of Tram Commissioning is issued with a Certificate of Tram Commissioning; and

33.3.3.2 once the last Tram to be issued with a Certificate of Tram Commissioning is issued with a Certificate of Tram Commissioning, during a period of no more than 9 months from the date on which such Certificate of Tram Commissioning is issued.

33.4 The Tram Supplier shall ensure that the Tram Documentation shall:

33.4.1 be complete and of good legible quality, in the English language;

33.4.2 contain all necessary drawings and all drawings shall set out:

33.4.2.1 equipment title;

33.4.2.2 unique document number;

33.4.2.3 number of pages;

33.4.2.4 revision number, date of revision and content of any revision (where applicable);

33.4.2.5 originator, checker and authorised signature; and

33.4.2.6 (where larger than A3 size) be capable of being photo reduced to A3 size

TIE00899939_0103

without loss of clarity; and

33.4.3 wherever practicable, be provided both in hard copy and electronic media and all electronic media shall:

33.4.3.1 be provided in suitable Microsoft Office or Adobe Acrobat format (which shall, for the avoidance of doubt, be easily printable and electronically copiable); and

33.4.3.2 shall be delivered virus checked in accordance with Good Industry Practice.

33.5 Such of the Tram Documentation, including that Tram Documentation referred to in Clause 33.3, that relates exclusively to Software shall, as soon as reasonably practicable and in any event within 25 Business Days of the Software having been updated, be deposited by the Tram Supplier as escrow material in accordance with the Escrow Agreement. The Client shall have equivalent access rights to the material as to the Tram Documentation save only that the Client shall only have access to said escrow material in the circumstances set out in the Escrow Agreement.

34. SPARES AND SPECIAL TOOLS

34.1 The Tram Supplier shall deliver to the Client on or before the Tram Maintenance Commencement Date at the Depot:

34.1.1 the Spare Parts set out in part 4 of Schedule 2 (*Employer's Requirements*); and

34.1.2 the Special Tools set out in part 5 of Schedule 2 (*Employer's Requirements*).

34.2 The Tram Supplier shall provide to the Client as soon as reasonably practicable and in any event within 12 months of the Commencement Date a list of all first tier Sub-contractors used by or intended to be used by it to obtain, manufacture and supply Spare Parts and Special Tools. The extent of first tier Sub-contractors shall be agreed by the Client and the Tram Supplier and in reaching such agreement, the Client shall be entitled to ask the Tram Supplier for details of those Sub-contractors who are not listed.

34.3 For a period of 30 years following the Tram Maintenance Commencement Date the Tram Supplier shall (at the price and within the delivery timescales set out for each Special Tool or Spare Part in Parts 4 and 5 (respectively) of Schedule 2 (*Employer's Requirements*)) continue to make available to the Client, **tie** and/or the Tram Maintainer, Spare Parts and Special Tools as may reasonably be required to operate the Trams and maintain them.

TIE00899939_0104

34.4 If the Tram Supplier cannot provide a Spare Part and/or a Special Tool at the price or within the delivery timescale specified then the Client, and/or **tie** (or the Tram Maintainer acting on **tie**'s behalf) shall be entitled to use the rights granted to it pursuant to Clause 51 (*Copyright and Intellectual Property*) in relation to the relevant Spare Parts and/or Special Tools to either manufacture such Spare Part and/or Special Tool itself or appoint a third party to do so. Any dispute arising out of this Clause 34.4 shall be resolved in accordance with the Dispute Resolution Procedure.

34.5 The purchase price for the Spare Parts and Special Tools provided pursuant to Clause 34.1 shall be payable by the Client as part of the Aggregate Tram Price in accordance with the Milestone Payment Schedule. The detailed list of Spare Parts is contained in part 4 of Schedule 2 (*Employer's Requirements*), and the detailed list of Special Tools is contained in part 5 of Schedule 2 (*Employer's Requirements*).

34.6 If any Spare Part or Special Tool is reasonably considered by the Client or **tie** to be defective or otherwise fails to meet the Required Standards within two years of delivery then provided that the Client (upon becoming aware of such situation) promptly notifies the Tram Supplier in writing of that fact and either (at the cost of the Tram Supplier):

34.6.1 makes such Spare Part reasonably available for collection by the Tram Supplier; or

34.6.2 returns such Spare Part to the Tram Supplier,

the Tram Supplier shall replace or modify (as appropriate) such Spare Part or Special Tool within 30 days of the notification (or such other period as the parties may agree acting reasonably and taking into account the nature of the relevant Spare Part or Special Tool), failing which the Aggregate Tram Price shall be reduced or (if the Aggregate Tram Price has already been paid) a rebate payment made within 10 days thereafter of an amount equal to the value of such Spare Part or Special Tool.

35. RISK AND TITLE

35.1 The Tram Supplier shall supply each Tram and the Tram Related Equipment free from all Security Interests and third party rights of any nature.

35.2 The Trams supplied pursuant to this Agreement shall become the property of CEC and legal ownership shall automatically vest in CEC when:

TIE00899939_0105

35.2.1 a Certificate of Tram Commissioning has been issued pursuant to this Agreement and in any event within twenty four hours of the successful completion of the Tram Commissioning Test; or

35.2.2 by exception on an individual Tram basis, at the sole discretion of the Client and formalised in writing when a Tram is complete and a Factory Acceptance Test Certificate has been issued pursuant to Clause 28 (*Pre-Delivery Inspections and Factory Acceptance Tests*);

35.2.3 in relation to each item of the Tram Related Equipment delivered to CEC, on the later of delivery of each item of the Tram Related Equipment to CEC and the Certificate of Tram Commissioning being issued in respect of the first Tram;

35.2.4 where pursuant to Clause 35.2.2 prior to delivery, the property in any Tram passes to CEC, the Tram Supplier shall set the Tram aside and mark it as CEC property in a manner which is effective under Spanish law to identify CEC legal ownership.

35.3 The Tram Supplier shall permit the Client and **tie** at any time upon reasonable notice to inspect any Tram which has become the property of CEC and shall grant the Client and **tie** access for such purpose to the Tram Supplier's premises or procure the grant to the Client and **tie** of access for such purpose to any other premises where the Tram may be located.

35.4 In relation to all Trams in which legal title has vested in CEC under this Clause legal title shall be in the possession of the Tram Supplier solely for the purposes of performing its obligations following delivery (or completed manufacture) pursuant to this Agreement and shall not be within the ownership or the disposition of the Tram Supplier for any other purpose. Notwithstanding the foregoing, the Tram Supplier shall remain liable, as prescribed by this Agreement, except for theft, vandalism, collision or other damage arising outwith the Tram Supplier's control (while in use on the Edinburgh Tram Network), for the safekeeping of and the risk of loss, damage or theft of each Tram until the relevant final Certificate of Tram Commissioning has been issued pursuant to Clause 31 (*Training, Commissioning, Testing And Certification*) and likewise in the case of each item of the Tram Related Equipment.

35.5 No Interim Certificate issued by the Client shall prejudice its right to reject any Tram which is not in accordance with this Agreement. Upon any such rejection, the legal title in the rejected Tram (and the risk of loss, damage or theft) shall immediately revert to the Tram Supplier.

TIE00899939_0106

35.6 The Tram Supplier shall be responsible for each Tram completely manufactured or in the course of manufacture and for all Tram Related Equipment until such time as risk in the Trams and the Tram Related Equipment passes to CEC in accordance with Clause 35.4.

35.7 The Tram Supplier shall promptly replace any Tram or any part, component or material incorporated in or to be used in connection with such Tram or any Tram Related Equipment, which are lost, damaged or destroyed by whatever cause, prior to the time when risk passes to CEC in accordance with Clause 35.2.

35.8 Any materials, goods, and equipment intended to form part of the completed Trams and all Tram Related Equipment which are at any time removed, such removal to be with the written consent of the Client (such consent not to be unreasonably withheld), from the Trams or the Depot will remain the property of CEC and the Tram Supplier undertakes (and shall procure that the Tram Supplier Parties so undertake) to the extent reasonably practicable, to clearly identify such materials, goods, equipment and all Tram Related Equipment as belonging to CEC and to keep all such Parts or Tram Related Equipment stored separately from any third party's property. The location of all such Parts shall be tracked in an asset management system at all times.

35.9 To the extent reasonably practicable, the Tram Supplier shall at its own expense label or otherwise clearly identify with a unique traceable coding system at all times as being the property of CEC (effective under Spanish law) any materials, goods, and equipment forming or intended to form part of the completed Trams and all Tram Related Equipment in the Tram Supplier's or any Tram Supplier Party's possession or control in relation to which advance payment has been made and/or title has vested in CEC pursuant to this Agreement or otherwise and the Tram Supplier shall ensure that such items shall at all times in the Tram Supplier's (or any Tram Supplier Party's) possession or control be kept separate from the Tram Supplier's or any third party's goods.

36. WARRANTY REGIME

36.1 Subject to the provisions of this Clause 36 (*Warranty Regime*), the Tram Supplier warrants that:

36.1.1 each Tram shall be free from Tram Defects during the Primary Tram Warranty Period;

36.1.2 all Paint and Finishes shall be free from Paint and Finish Defects during the Paint and Finish Warranty Period;

TIE00899939_0107

36.1.3 all Extended Tram Warranty Parts shall be free from Extended Tram Warranty Defects during the Extended Tram Warranty Period; and

36.1.4 the fleet of Trams shall be free from Fleet Tram Defects during the Fleet Tram Defect Period,

each a "**Warranty**" and together the "**Warranties**".

36.2 If the Client claims that there is a Tram Defect, an Extended Tram Warranty Defect, a Paint and Finish Defect and/or a Fleet Tram Defect:

36.2.1 the Client:

36.2.1.1 shall, subject to Clause 36.2.1.3 promptly send to the Tram Supplier a notice ("**Defect Notice**") detailing and identifying:

(a) the type of defect as a Tram Defect, a Fleet Tram Defect, a Paint and Finish Defect and/or an Extended Tram Warranty Defect (each an "**Identified Defect**" and together the "**Identified Defects**"); and

(b) when it expects to make the Tram available to the Tram Supplier for rectification;

36.2.1.2 shall, if it submits a Defect Notice, provide the Tram Supplier with all records reasonably requested by the Tram Supplier in writing and which are reasonably necessary to enable the Tram Supplier to carry out its obligations under Clause 36.2.2; and

36.2.1.3 may, if the Tram Supplier does not diligently investigate and rectify the Identified Defect in accordance with Clause 36.2.2, carry out the rectification work or appoint a suitably qualified and insured third party to carry out the rectification work (including giving such warranty as is appropriate without prejudice to the continuation of any Warranty) and without prejudice to its other rights and remedies recover its reasonable costs of so doing from the Tram Supplier; and

36.2.2 upon the delivery of the Defect Notice, the Tram Supplier shall:

36.2.2.1 promptly, diligently and carefully investigate and search for the cause of the Identified Defect;

TIE00899939_0108

36.2.2.2 immediately notify the Client and the Tram Supplier where it appears to the Tram Supplier that the Tram is unlikely to be available for a period of more than four hours;

36.2.2.3 subject to Clause 36.4, promptly propose a rectification plan ("**Rectification Plan**") and a rectification period ("**Rectification Period**") (which may be extended by agreement of the parties) to be approved by the Client (such approval not to be unreasonably withheld or delayed); and

36.2.2.4 in accordance with the approved Rectification Plan:

(a) remedy the Identified Defect; and

(b) in respect of Fleet Tram Defects, execute all works of repair or rectification to ensure that the relevant Fleet Tram Defect is corrected and that such Fleet Tram Defect is not present in the Trams already delivered or to be delivered.

36.3 If the Tram Supplier fails to rectify an Identified Defect in accordance with Clause 36.2.2.3, the Client may itself carry out the rectification work or appoint a third party to carry out the rectification work and without prejudice to its other rights and remedies under this Agreement (including the full benefit of any Warranty under this Clause 36 (*Warranty Regime*)), recover the costs of so doing as a debt due from the Tram Supplier.

36.4 If the Client does not approve the Rectification Plan proposed by the Tram Supplier in accordance with Clause 36.2.2.3, then a Dispute shall be deemed to have occurred and the Client and the Tram Supplier shall resolve the Dispute in accordance with the Dispute Resolution Procedure, provided that before submitting to the Dispute Resolution Procedure, the Client reserves the right to appoint a qualified third party to perform or itself perform the relevant rectification work, with the party who is responsible for paying the costs of the rectification works being decided as part of the resolution of the Dispute pursuant to the Dispute Resolution Procedure.

36.5 If having rectified an Identified Defect, the Tram Supplier considers that the Client did not have the right to require it to rectify an Identified Defect under Warranty and/or it was not entitled to recover all or some of its costs incurred in rectifying an Identified Defect because:

36.5.1 the Identified Defect was in fact outside the scope of the Warranty or the Warranty Period applicable to the Identified Defect;

TIE00899939_0109

36.5.2 the Client did not comply in all material respects with the relevant obligations pursuant to Clause 36.2.1.2;

36.5.3 the Identified Defect was caused by the Tram Supplier or Operator respectively not maintaining or operating the Trams in accordance with the relevant parts of the Tram Documentation;

36.5.4 the infrastructure of the Edinburgh Tram Network not being maintained in accordance with Good Industry Practice;

36.5.5 there was a material change in the operating conditions (as specified in the Tram Requirements Specification and/or the Tram Employer's Requirements) of the Tram the subject of the Identified Defect;

36.5.6 an accident had occurred involving the Tram the subject of the Identified Defect (excluding those accidents which arise out of or in connection with the inadequacy of the training provided by the Tram Supplier and/or the inadequacy of the Tram Documentation or the occurrence of the Identified Defect);

36.5.7 the Identified Defect is caused by a clear act of vandalism; and/or

36.5.8 in relation to an Extended Tram Warranty Defect, such defect had been caused by modifications to the Extended Tram Warranty Part identified as defective which had not been approved by the Tram Supplier (excluding such modifications that were required by Law or by this Agreement and/or had been performed by the Tram Supplier or by a third party pursuant to Clauses 36.2.1.3 or 36.4),

then the Tram Supplier shall notify the Client of such reason and a Dispute shall be deemed to have occurred and the Tram Supplier and the Client shall resolve the Dispute in accordance with the Dispute Resolution Procedure.

36.6 If any part, component or system of a Tram is repaired, rebuilt or replaced under Warranty then it shall have applied to it the appropriate full Primary Warranty Tram Period, Extended Tram Warranty Period, Paint and Finish Warranty Period and/or Fleet Tram Defect Period (as appropriate to the repaired, rebuilt or replaced part, component or system).

36.7 Following the submission of a Defect Notice, if a Tram is taken out of service for rectification under Warranty pursuant to this Clause 36 (*Warranty Regime*), the Warranties given in respect of that Tram and all Warranties applicable to all relevant systems, section, parts, components, or equipment incorporated in or supplied with such Tram shall continue until:

TIE00899939_0110

36.7.1 the rectification has been completed in accordance with the approved rectification plan or has otherwise been rectified by the Client and/or its Sub-contractors;

36.7.2 any necessary consents have been obtained to enable such Tram to resume Passenger Services; and

36.7.3 the Tram has been returned to the Client for use in Passenger Services,

and thereafter for a period (in respect of each Warranty) equal to the unexpired portion of each Warranty at the date of the Defect Notice.

37. USE OF THE DEPOT

37.1 On completion of the construction of the Depot, the Tram Supplier shall enter into and execute the Depot Sub-Licence in the form set out in Schedule 3 (*Depot Sub-Licence*).

37.2 Subject to the Tram Supplier executing the Depot Sub-Licence and complying with and procuring the Tram Supplier Parties' compliance with the obligations in this Clause 37 (*Use of the Depot*) and the Depot Sub-Licence, the Tram Supplier and the Tram Supplier Parties shall have the right to access and use those parts of the Depot which the Tram Supplier and the Tram Supplier Parties properly require to so use for the purpose of carrying out the Tram Works in accordance with this Agreement.

37.3 The Tram Supplier agrees that:

37.3.1 the right to access and use the Depot granted pursuant to this Clause 37 (*Use of the Depot*) and the Depot Sub-Licence shall terminate on the earlier of the Termination Date or the Expiry Date; and

37.3.2 the Tram Supplier's and the Tram Supplier Parties' right to use such parts of the Depot shall not create any relationship of landlord and tenant.

37.4 The Client gives no warranty as to the condition or fitness for purpose of the Depot.

37.5 Subject to the exception set out in Clause 41.5, **tie** and the Client shall not be liable for the death of or injury to persons or damage to any property or for any losses, claims, demands, actions, proceedings, damages, costs or expenses or other liability incurred by the Tram Supplier and/or the Tram Supplier Parties or any person in the use of the Depot.

37.6 Nothing in this Clause 37 (*Use of the Depot*) or the Depot Sub-Licence shall restrict **tie's** and the Client's absolute right of access to any part of the Depot at any time.

TIE00899939_0111

38. PRICE AND PAYMENT

Milestone Achievement

38.1 Subject to and in accordance with the remaining provisions of this Clause 38 (*Price and Payment*), the Client shall pay the Tram Supplier each Milestone Payment following the completion of the Milestone to which it relates.

38.2 Any application for payments of sums due under this Agreement and any payment to be made shall be made in accordance with the procedure set out in this Clause 38 (*Price and Payment*).

Milestone Payments

38.3 The Tram Supplier shall submit each application for payment in respect of Milestone Payments, any other fees, costs and/or expenses in respect of Permitted Variations or as otherwise agreed in accordance with this Agreement which are being claimed by the Tram Supplier for the previous Reporting Period, to the Client's Representative within 3 Business Days following each Reporting Period End Date.

38.4 Each application for payment shall:

38.4.1 set out the Milestones completed in that Reporting Period and the Milestone Payment due in respect of the same, with evidence of satisfaction of such Milestones;

38.4.2 set out any Delivery Retentions to be made, pursuant to Clause 41.21;

38.4.3 set out any Delivery Retention Repayments to be made by the Client to the Tram Supplier, pursuant to Clause 41.23 and 41.24.3;

38.4.4 set out any other agreed adjustments pursuant to a Permitted Variation; and

38.4.5 set out any other sums due to or from the Tram Supplier under and/or arising out of this Agreement in accordance with its terms,

(together with reasonable supporting documentation establishing the basis of such sums being claimed).

38.5 The Client shall procure that the Client's Representative shall, subject to any clarifications as are in the Client's opinion (acting properly and reasonably) necessary, certify by notice in writing (an "**Interim Certificate**") to the Tram Supplier that part of the sum claimed in the application for payment which is approved by the Client and give reasons why any part of the

TIE00899939_0112

sum claimed has not been certified and the value of the sums involved no later than 10 Business Days after the date on which application for payment was received by the Client.

38.6 The Tram Supplier shall submit a VAT invoice in respect of the amount set out in the Interim Certificate to the Client within seven days of the date of the Interim Certificate. Payment will become due to the Tram Supplier on the date of receipt of the said VAT invoice by the Client and subject to Clause 38.7 the final date for payment by the Client of such valid VAT invoice shall be twenty (20) Business Days from the date of receipt of the VAT invoice by the Client.

38.7 NOT USED.

38.8 If the Tram Supplier is late in supplying a valid VAT invoice to the Client by more than three Business Days after the required timescales set out in Clause 38.6, payment in respect of any amount certified in an Interim Certificate shall become due to the Tram Supplier on the date of receipt of the relevant valid VAT invoice by the Client in respect of the late application for payment, and the final date for payment of such valid VAT invoice to be made by the Client to the Tram Supplier shall be within twenty (20) Business Days of the first date of the Reporting Period following receipt of the late valid VAT invoice.

38.9 Set-off

38.9.1 The Tram Supplier shall not be entitled to retain or set-off any amount owed to it by the Client against any amount due to the Client by it.

38.9.2 Subject to Clause 38.9.3, the Client may deduct any amount payable by the Tram Supplier to the Client whether by way of damages or in respect of any loss or expense sustained by the Client by reason of the Tram Supplier's breach of this Agreement from any other payment or payments due to be made to the Client by the Tram Supplier under this Agreement.

38.9.3 Any notice of intention to withhold payment shall be served by the Client at least five (5) Business Days prior to the final date for payment calculated in accordance with Clause 38.6 and such notice shall state the sums being withheld and the detailed reason or detailed reasons for such withholding. Where an effective notice of intention to withhold payment is given, but on the matter being referred to the Dispute Resolution Procedure, it is decided that the whole or part of the amount should be paid, the decision shall be construed as requiring payment not later than:

38.9.3.1 five (5) Business Days from the date of the decision; or

TIE00899939_0113

38.9.3.2 the date which, apart from the notice, would have been the final date for payment,

whichever is the later.

38.9.4 The Tram Supplier shall be entitled to payment of interest as provided in Clause 38.14 in respect of the relevant part of any payments which have been withheld in accordance with Clause 38.9.2 but are subsequently determined as being payable by the Client to the Tram Supplier either by agreement between the Parties or a decision following a referral to the Dispute Resolution Procedure. The interest shall be calculated for the period between the date when the relevant part of the payment should have been paid but for the notice of intention to withhold payment and the date on which payment is made by the Client in accordance with Clause 38.9.3.

38.10 The Tram Supplier and the Client acknowledge that:

38.10.1 a maximum of only one application for payment may be made under this Clause 38 (*Price and Payment*) in any Reporting Period;

38.10.2 the amount to be specified for payment in any Interim Certificate in respect of a Milestone shall not exceed the amount specified in the Milestone Payment Schedule in relation to the achievement of the Milestone to which such Interim Certificate relates; and

38.10.3 notwithstanding anything to the contrary contained in this Agreement, the Client shall not be obliged to pay any Milestone Payment earlier than the date set out in the Milestone Payment Schedule.

General

38.11 Save as otherwise expressly stated in this Agreement:

38.11.1 all payments under this Agreement to the Tram Supplier shall be made in pounds sterling by electronic transfer of funds to:

Name and Address of Bank:	CITIBANK C/ Jose Ortega y Gasset, no. 29 28006 Madrid (Spain)
Swift:	CITIESMX
IBAN:	ES19 1474 0000 1200 0693 0115

TIE00899939_0114

Account Number: 1474-0000-12-0006930115

Account Name: Construcciones Y Auxiliar de Ferrocarriles S.A. (CAF)

38.11.2 all payments under this Agreement to the Client shall be made in pounds sterling by electronic transfer of funds to:

Name and Address of Bank:

Swift:

IBAN:

Account Number:

Account Name:

38.11.3 all payments payable by (or on behalf of) the Client under this Agreement are inclusive of:

38.11.3.1 all costs and charges whatsoever in relation to the design, manufacture, delivery, testing and commissioning of the relevant Tram or Tram Related Equipment including those costs and charges relating to repeat testing or repeat commissioning resulting from a Tram Supplier failure;

38.11.3.2 all costs and charges regarding technical advice and assistance to be given relating to the design, manufacture, delivery, testing and/or commissioning of the Trams;

38.11.3.3 all training costs and charges in accordance with the Training Schedule; and

38.11.3.4 all fees and expenses payable by the Tram Supplier arising out of or in connection with the performance by the Tram Supplier of this Agreement, including all fees and expenses:

(a) of transporting and delivering Trams and Tram Related Equipment to the Depot whether from inside or outside the UK including any relevant import duties, export duties or other similar or related charges;

TIE00899939_0115

(b) incurred for or in connection with applications for or the grant of any Consent;

(c) payable to professional advisers and otherwise in connection with the review, negotiation and entering into and enforcement of this Agreement and any related agreement;

(d) incurred in relation to licence applications and renewals of any kind; and

(e) incurred in procuring and maintaining relevant insurance.

38.12 If the due date for any payment would otherwise be a day that is not a Business Day, payment shall be made on the next Business Day.

38.13 No payment made by a Party to another Party under this Agreement shall prevent the paying Party from recovering any amount overpaid or wrongfully paid by the paying Party under this Agreement (however that payment may have arisen) including those paid by mistake of law or of fact.

38.14 In the event of a failure by either party to make payment on the due date in accordance with this Clause 38 (*Price and Payment*), such party shall pay to the other party interest on such payment at a rate per annum equivalent to 2 per cent above the base rate of The Royal Bank of Scotland plc current on the date upon which such payment first becomes overdue adjusted to reflect any changes to the rate during the period over which the payment remains overdue.

38.15 Pursuant to Clause 38.14 in the event that the party to whom payment is due, suffers a demonstrable cost of the currency exchange hedge as a result of an exchange rate fluctuation between the pound sterling and the Euro, then the party due to make payment shall be liable for this amount to the party to whom the payment is due.

38.16 The Tram Supplier shall not suspend the performance of its obligations under this Agreement if any payment is overdue (but without prejudice to the Tram Supplier's rights to terminate this Agreement under Clause 57 (*Client Default Termination*)).

39. VAT

39.1 The Tram Supplier shall be deemed to have allowed in its tender for the tax payable by it as a taxable person to the Commissioners of Customs and Excise (or similar authorities in any

TIE00899939_0116

relevant jurisdiction) being tax chargeable on any taxable supplies to the Client which are to be made under this Agreement.

39.2 All certificates issued by the Client or the Client's Representative under Clause 38.5 shall be net of Value Added Tax. In addition to the payments due under such certificates the Client shall separately identify and pay to the Tram Supplier any Value Added Tax properly chargeable by the Tram Supplier on the supply to the Client of any goods and/or services by the Tram Supplier under this Agreement.

39.3 If any dispute, difference or question arises between either the Client or the Tram Supplier and the Commissioners of Customs and Excise (or similar authorities in any relevant jurisdiction) in relation to any tax chargeable or alleged to be chargeable in connection with this Agreement or the Tram Works, each shall render to the other such support and assistance as may be necessary to resolve the dispute, difference or question.

39.4 Where, under this Agreement, any amount is calculated by reference to any sum which has been or may be incurred by any person, the amount shall include any VAT in respect of that sum only to the extent that such VAT is not recoverable as input tax by that person (or a member of the same VAT group) whether by set-off or repayment.

39.5 Clause 64 (*Dispute Resolution*) shall not apply to any dispute, difference or question arising under this Clause 39 (*VAT*).

40. REQUIRED INSURANCES

40.1 The Tram Supplier shall, at its own cost, procure that each of the Required Insurances is taken out and comes into effect on the relevant date specified in each "Period of Insurance" set out in part 1 of Schedule 11 (*Required Insurances*) and shall maintain the Required Insurances in full force and effect until the relevant date specified in each "Period of Insurance" set out in part 1 of Schedule 11 (*Required Insurances*), provided that each such Required Insurance is available in the EU insurance market at commercially reasonable rates and on commercially reasonable terms to contractors of the same status as at the Effective Date and of the same discipline as the Tram Supplier.

40.2 The Tram Supplier shall procure that all Required Insurances shall:

40.2.1 be maintained in accordance with part 1 of Schedule 11 (*Required Insurances*); and

TIE00899939_0117

40.2.2 be placed at all times with insurers authorised to carry out insurance business in the United Kingdom and confirmed in writing as acceptable by the Client (such written acceptance not to be unreasonably withheld or delayed).

40.3 The Tram Supplier shall not make any material alteration to the terms of the Required Insurances (including material changes to the level of deductibles) without the Client's prior approval (which approval shall not be unreasonably withheld). If any such material alteration to the Required Insurances is made, the Tram Supplier shall complete the questionnaire set out in part 3 of Schedule 11 (*Required Insurances*), duly endorsed by its insurance broker. If the insurer makes or attempts to make any material alteration or purports to withdraw cover, the Tram Supplier shall promptly give notice of this to the Client.

40.4 The Tram Supplier shall ensure that each of its insurance brokers gives the Client as soon as reasonably practicable after any policy of Required Insurance is taken out, replaced or renewed, a letter of undertaking in the form set out in part 2 of Schedule 11 (*Required Insurances*).

40.5 The Tram Supplier shall provide satisfactory evidence to the Client that the Required Insurances have been effected. Thereafter, the Tram Supplier shall upon request produce to the Client receipts for the payment of current insurance premiums or equivalent documentary evidence to confirm that such Required Insurances are being properly maintained, and on the anniversary of the Effective Date and on each subsequent anniversary thereof until the Expiry Date or Termination Date (whichever is earlier), the Tram Supplier shall complete an insurance questionnaire set out in part 3 of Schedule 11 (*Required Insurances*) in relation to the Required Insurances to be taken out by the Tram Supplier and submit such completed questionnaire to the Client as soon as reasonably practicable. If the Tram Supplier defaults in insuring or continuing to maintain the Required Insurances, the Client may insure against any risk in respect of which such default has occurred and recover any premiums from the Tram Supplier as a debt immediately due and payable.

40.6 The Tram Supplier shall:

40.6.1 procure that the Required Insurances which are to be maintained by the Tram Supplier in accordance with part 1 of Schedule 11 (*Required Insurances*) contain a waiver of subrogation against **tie**, any **tie** Party, the Client, any Client Parties, and the insured parties as set out in part 1 of Schedule 11 (*Required Insurances*) save in respect of fraud or deliberate non-disclosure; and

TIE00899939_0118

40.6.2 where the Tram Supplier is obliged to effect any Required Insurances, not bring any claim or action against **tie** (or any **tie** Party) or the Client (or any Client Party) in respect of any Losses suffered by it in circumstances where and to the extent that the Tram Supplier could recover such Losses under such insurance (whether or not such insurance has in fact been effected or, if effected, has been vitiated as a result of any act or omission of the Tram Supplier (or any Tram Supplier Party), including non-disclosure or under-insurance), provided that, to avoid doubt, this Clause 40.6.2 shall not by itself prevent the Tram Supplier from claiming against the Client (or any Client Party) in respect of a breach of this Agreement by the Client or any Client Party for any loss or damage arising from such breach not covered because of the level of deductibles under such insurance permitted by this Agreement or to the extent such loss or damage exceeds the greater of the insurance placed or the minimum limit of indemnity required in respect of such insurance under part 1 of Schedule 11 (*Required Insurances*).

40.7 The Tram Supplier shall not take any action or fail to take any action or (insofar as it is reasonably within its power) permit or allow others to take or fail to take any action (in either case including failure to disclose any fact) as a result of which any of the Required Insurances may be rendered void, voidable, unenforceable, suspended or impaired in whole or in part or which may otherwise render any sum paid out under any relevant policy repayable in whole or in part.

40.8 The supply to the Client of any insurance policy or insurance certificate or renewal certificate or other evidence of compliance with this Clause 40 (*Required Insurances)* shall not imply, or be taken as, acceptance by the Client that:

40.8.1 the extent of insurance cover is sufficient and its terms are satisfactory; or

40.8.2 in respect of any interests or parties not insured or any risks not insured against, an acceptance by the Client that the same were uninsurable.

40.9 Neither failure to comply nor full compliance with the provisions of this Clause 40 (*Required Insurances*) shall relieve the Tram Supplier of its liabilities and obligations under this Agreement.

40.10 The Tram Supplier shall apply any proceeds of any policies of insurance maintained in accordance with part 1 of Schedule 11 (*Required Insurances*) in satisfaction of the claim, demand, proceeding or liability in respect of which such proceeds are payable (unless already paid direct to the third party or employee by the insurer).

TIE00899939_0119

40.11 The Tram Supplier undertakes with the Client in relation to the Required Insurances:

40.11.1 to comply with all requirements of the insurers; and

40.11.2 to give notice to the Client immediately upon the happening of any event which will adversely affect any policy of insurance effected in accordance with this Clause 40 (*Required Insurances*), including the downgrading of the credit rating below A- by Standard & Poors of any party providing any of the Required Insurances.

40.12 The Tram Supplier shall immediately inform the Client in writing if any of the Required Insurances cease to be maintained and/or cease to be available in the EU insurance market at commercially reasonable rates provided that if the Tram Supplier is maintaining such insurance at such rates, the Client shall undertake in writing to reimburse the Tram Supplier in respect of half of the net cost of such insurance to the Tram Supplier above commercially reasonable rates. If the Client undertakes in writing to reimburse the Tram Supplier in respect of half of the net cost of such insurance to the Tram Supplier above commercially reasonable rates or, if the Client effects such insurance at or above commercially reasonable rates, the Tram Supplier shall reimburse the Client in respect of what the net cost of such insurance to the Tram Supplier would have been at commercially reasonable rates and terms, and the cost of maintaining any such insurance at rates above commercially reasonable rates by the Tram Supplier or by the Client shall be borne in equal proportions by the Tram Supplier and the Client

40.13 The Tram Supplier shall fully co-operate with any measures reasonably required by the Client, including completing any proposals for insurance and associated documents or maintaining such insurance at rates above commercially reasonable rates if the Client undertakes in writing to reimburse the Tram Supplier in respect of the net cost of such insurance to the Tram Supplier above commercially reasonable rates or, if the Client effects such insurance at or above commercially reasonable rates, reimbursing the Client in respect of what the net cost of such insurance to the Client would have been at commercially reasonable rates and terms.

40.14 The Tram Supplier acknowledges that **tie** has taken out insurances (the "**OCIP Insurances**") and agrees to comply with the requirements of the insurers with whom the OCIP Insurances are placed. The Tram Supplier agrees that it will intimate to the Client any act, occurrence or failure which may:

40.14.1 lead to any claim being made under the OCIP Insurances; or

TIE00899939_0120

40.14.2 render any of the OCIP Insurances void, voidable, unenforceable, suspended or impaired in whole or in part or which may otherwise render any sum paid out under any relevant policy repayable in whole or in part.

40.15 The Tram Supplier shall not take any action or fail to take any reasonable action or (insofar as it is reasonably within its power) permit or allow others to take or fail to take any action (including in either case failure to disclose any fact) as a result of which any of the OCIP Insurances may be rendered void, voidable, unenforceable, suspended or impaired in whole or in part or which may otherwise render any sum paid out under any relevant policy repayable in whole or in part.

40.16 The Tram Supplier shall bear all excesses and deductibles payable in respect of claims made under the OCIP Insurances or the Additional Insurances, until the Certificate of Tram Commissioning is issued in respect of each Tram, except for acts of vandalism of Trams whilst stabled in the Depot or when being used for testing other than whilst under the responsibility of the Tram Supplier. Notwithstanding the foregoing the Tram Supplier shall not be liable for payment of any applicable deductible under the OCIP Insurances and the Additional Insurances where any claim arising is due solely to the act or omission or negligence of the Client or the Tram Supplier or where the Tram Supplier or any Tram Supplier Party is otherwise responsible for such claim in terms of this Agreement.

40.17 The Client may ask the Tram Supplier to take out and maintain any insurance from time to time in the names of the parties reasonably requested by the Client (the "**Additional Insurance**"). If Additional Insurance is required, the terms of this Clause 40 (*Required Insurances*) including the provisions which are stated to apply to the "Required Insurances" shall apply with any appropriate adjustment to be agreed between the Parties as a Client Change. The Tram Supplier shall procure that any Additional Insurance shall:

40.17.1 (if the Client so requires) contain a provision that the Client or any other party reasonably requested by the Client is named as a co-insured party;

40.17.2 provide that any Additional Insurance shall continue in effect and unaltered for the benefit of the insured parties for at least ninety days after written notice by registered mail of any cancellation (including non-renewal), change, modification or lapse for any reason;

40.17.3 contain a provision that requires the insurer to send copies of all notices of cancellation or alteration or suspension or any other notices given under or in relation

TIE00899939_0121

to the policy to the Client promptly upon receiving any notices of cancellation or alteration or suspension or any other notices;

40.17.4 contain a provision that a notice of a claim given to the insurer by one of the insured parties under the policy shall, in the absence of manifest error, be accepted by the insurer as valid notification of a claim in respect of the interests of all insured parties;

40.17.5 contain a provision to the effect (on the basis of non-vitiation/severability) that all the provisions of any Additional Insurance shall operate as if there were a separate policy in effect (save in respect of the sums insured, limits of liability and excesses/deductibles which shall be at the levels stated) for each named insured and that non-compliance with any policy term, condition or warranty and/or misrepresentation or non disclosure of material information by the Tram Supplier or any other co-insured will not affect the rights and/or interests of the Client or any other co-insured party under any policies effected as Additional Insurance; and

40.17.6 ensure that the Additional Insurances are primary, and shall not be brought into contribution with any other policy or policies effected by or on behalf of any of the insured parties;

40.18 The Tram Supplier shall supply the Client with copies of every policy document, insurance certificate and renewal certificate relating to any Additional Insurance (or such other evidence of insurances as may be reasonably required by the Client) and documentary evidence to the effect that the Required Insurances (other than any Additional Insurance) have been taken out and are being maintained as soon as it is available but in any event no later than 7 days (in respect of certificates) and sixty days (in respect of policies) after the inception of the relevant policies, together with evidence of payment of the premiums and any periodic renewal certificates.

40.19 The Tram Supplier shall inform the Client in writing as soon as reasonably practicable after it receives a claim or becomes aware of the occurrence of any event that may give rise to a claim under any Required Insurance (if related to the Edinburgh Tram Network), or Additional Insurance and will ensure that the Client is kept fully informed of subsequent action and developments concerning the claim; such written information shall not be required in relation to any claim of less than £50,000 (as Indexed). The Tram Supplier shall take such steps as are necessary or appropriate to ensure that each Tram Supplier Party, in respect of any event or claim of a like nature arising out of or relating to the operation or responsibility of that Tram Supplier Party, or any event of claim of which they become aware, takes in relation to the Tram Supplier like action to that which the Tram Supplier is required to take under this Clause

TIE00899939_0122

40.19 in relation to the Client, and shall inform the Client promptly of information thus received from any Tram Supplier Party.

40.20 At each anniversary of the Effective Date, the Tram Supplier shall provide the Client with a summary of all claims made under the Required Insurances, where such claims arise out of this Agreement. Such summary shall include date, circumstances, status and amounts paid and outstanding on each claim.

40.21 Without prejudice to any other provision of this Agreement, the Tram Supplier undertakes to the extent it has the right to do so under the relevant policy that it will not (and that each of the Tram Supplier Parties to the extent each respectively has the right to do so under the relevant policy will not) settle any OCIP Insurance or Additional Insurance claim above £50,000 (as Indexed) without the prior written agreement of the Client (such agreement not to be unreasonably withheld or delayed).

40.22 The Tram Supplier shall promptly inform the Client in writing if any of the Additional Insurances cease to be maintained and/or cease to be available in the EU insurance market at commercially reasonable rates and on commercially reasonable terms to contractors of the same status, as at the date of Client's request to the Tram Supplier that it takes out the Additional Insurance, and discipline as the Tram Supplier. In this event, the Parties shall meet to discuss the means by which any risks previously covered by the Additional Insurances should be managed, mitigated or controlled. Any agreement shall be a Client Change. Any increased or additional premium required by insurers by reason of the Tram Supplier's own claims record or other acts, omissions, matters or things particular to the Tram Supplier shall be deemed to be within commercially reasonable rates and terms.

41. LIABILITY, INDEMNITIES, RETENTION AND LIQUIDATED DAMAGES

41.1 Subject to the exception set out in Clauses 41.3, 41.4 and 41.5 the Tram Supplier shall indemnify the Client and its officers, agents and employees ("**Indemnified Parties**") from and against any and all actions, claims, (including third party claims), demands, proceedings, liabilities damages, penalties, fines, forfeitures, and the costs and expenses incident thereto (including any legal costs of defence) which any of the Indemnified Parties may hereafter incur, become responsible for, or pay out as a result of or in connection with:

41.1.1 any of the Tram Supplier's, or its employees' or any Tram Supplier Party's negligent or wilful acts or wilful omissions in the performance of the Tram Works;

41.1.2 breach of any term or provision of this Agreement;

TIE00899939_0123

41.1.3 breach of any Law; and/or

41.1.4 any non-performance or delay in performance of the Tram Supplier's obligations under this Agreement.

Such actions, claims, demands, proceedings, suits, losses, penalties, fines, forfeitures, and the costs and expenses shall include such actions, claims, demands, proceedings, suits, losses, penalties, fines, forfeitures, and the costs and expenses, in respect of:

(a) death or injury to any person;

(b) loss of or damage to any property;

(c) loss of or damage to any part of the Tram Works (including any Trams);

(d) causing the Client be in breach of any Law;

(e) causing the Client to be in breach of the Tram Inspector Agreement; or

(f) infringement or alleged infringement of a third party's Intellectual Property Rights.

41.2 Save where expressly provided for, nothing in this Agreement shall expose either Party to the application of Indirect Loss.

41.3 The exception referred to in Clause 41.1, which is the responsibility of the Client, is death of, or injury to, persons or loss of or damage to property resulting from any act, neglect, or breach of statutory duty by the Client, its agents, servants or other contractors (not being employed by the Tram Supplier or any Tram Supplier Party) or for or in respect of any claims, demands, proceedings, damages, costs, charges and expenses in respect thereof or in relation thereto.

41.4 The Tram Supplier's liability to indemnify the Client under Clause 41.1 shall be reduced in proportion to the extent that the act or neglect of the Client, its agents, servants or other contractors (not being employed by the Tram Supplier or any Sub-Contractor) may have contributed to the said death, injury, loss or damage.

41.5 Nothing in this Agreement shall exclude or limit the liability of either Party for:

41.5.1 death or personal injury caused by that Party's negligence or the negligence of anyone for whom that Party is vicariously liable;

41.5.2 fraud or fraudulent misrepresentation;

TIE00899939_0124

41.5.3 any breach of warranty given as to valid and marketable title, freedom from unduly onerous burdens and conditions of entitlement to possession by action of prescription;

41.5.4 subject to Clause 41.6, any breach of this Agreement or any delict (including negligence) or other liability arising prior to termination of this Agreement; or

41.5.5 any breach of the Warranties;

provided that nothing in this Clause 41.5 shall confer on either Party rights or remedies that they would not otherwise have.

41.6 Notwithstanding anything to the contrary contained in this Agreement and/or the Reliability Bond, the liability of the Tram Supplier under or in connection with this Agreement whether in contract or delict in negligence for breach of statutory duty or otherwise other than in respect of Clause 41.5.1, 41.5.2, and 41.5.5 shall not exceed the sum of 20% of the Aggregate Tram Price, which sum shall exclude:

41.6.1 liabilities which are or should have been covered by the proceeds of the Required Insurances, the OCIP Insurances, and/or any Additional Insurances.

41.6.2 liabilities which would have been covered by the proceeds of the Required Insurances, the OCIP Insurances and/or any Additional Insurances but for the application of any deductible under such Required Insurances, the OCIP Insurances and/or any Additional Insurances.

41.7 Notwithstanding anything to the contrary contained in this Agreement and/or the Reliability Bond and, except as detailed in Clause 41.5.1, the Client's total liability hereunder whether in contract, delict or howsoever arising shall not exceed the Aggregate Tram Price.

41.8 Subject to Clause 41.3, neither party shall be entitled to claim damages for breach of this Agreement, in delict (including negligence), breach of statutory duty or on any other basis whatsoever to the extent that such damages claimed by that Party are for Indirect Losses suffered by that Party or any of the Indemnified Parties provided that for the avoidance of doubt, nothing in this Clause 41.8 or Clause 41.2 shall affect either Party's liability to the other Party or Indemnified Party, in respect of any claim, action, proceedings or demand against such other Party or an Indemnified Party by a third party in connection with Indirect Losses suffered.

41.9 The Tram Supplier shall not be relieved or excused of any responsibility, liability or obligation under this Agreement by the appointment of any Tram Supplier Party. The Tram Supplier

TIE00899939_0125

shall, as between itself and the Client, be responsible for the selection, pricing, performance, acts, defaults, omissions, breaches, delicts and offences of any Tram Supplier Party. All references in this agreement to any act, default, omission, breach, delict or offence of the Tram Supplier shall be construed to include any such act, default, omission, breach or delict of any Tram Supplier Party.

41.10 The Tram Supplier acknowledges and agrees that the express rights provided in this Agreement in relation to termination and the calculation and payment of amounts due following such termination are exclusive and are in place of (and not cumulative with) any other rights or remedies which might arise as a consequence of such termination. The Tram Supplier hereby waives all other rights and remedies arising from such termination, whether express or implied, arising by common law (including in delict), by statute or otherwise howsoever provided that nothing in this Clause 41.10 excludes the right of the Tram Supplier to claim remedies expressly conferred on them by this Agreement.

41.11 Where the act or default of the Tram Supplier or any of the Tram Supplier Parties, causes the Client to commit an offence, the Tram Supplier shall immediately take any measure necessary to ensure that that act or default, no longer causes the Client to commit that offence.

41.12 Where the Client reasonably suspects that such an act or default is about to take place and it reasonably believes that this will result in the Client committing an offence, the Client may issue an instruction to the Tram Supplier to remedy the act or default forthwith and the Tram Supplier shall comply with the said instruction.

41.13 The Parties acknowledge and agree that the only rights available to them to terminate this Agreement are those expressly set out in this Agreement and that neither Party shall be entitled to exercise a right to terminate or rescind or accept the repudiation of this Agreement under any right whether arising in common law or statute or otherwise howsoever (other than for fraud or a fraudulent misrepresentation).

IPR Claims

41.14 Subject always to the limitations of liability in Clause 41.4, the Tram Supplier shall at all times, during and after the Tram Supply Period, on written demand indemnify the Client and keep the same indemnified against all Losses incurred by, awarded against or agreed to be paid by the Client arising from an IPR Claim provided that the Tram Supplier shall not be liable under this Clause 41.14 if such Losses and other liabilities (including legal fees) are caused by the Client Parties failing to use the IPR in accordance with Clause 51 (*Copyright and Intellectual Property*).

TIE00899939_0126

41.15 The Client agrees that:

41.15.1 it will notify the Tram Supplier in writing of any IPR Claim;

41.15.2 subject to the Tram Supplier securing the Client to its reasonable satisfaction in relation to any further claims or losses incurred thereby, it will allow the Tram Supplier to conduct all negotiations and proceedings and will provide the Tram Supplier with such reasonable assistance required by the Tram Supplier, each at the Tram Supplier's cost, regarding the IPR Claim; and

41.15.3 it will not, without prior consultation with the Tram Supplier, make an admission relating to the IPR Claim.

41.16 The Tram Supplier shall diligently consider and defend or shall procure that the IPR Claim is diligently considered and defended using competent and experienced counsel and in such a way as not to bring the reputation of the Client into disrepute. The Tram Supplier shall consult the Client's Representative regularly regarding the defence and other dealings that it has regarding the IPR Claim.

41.17 The Tram Supplier shall not settle or compromise any IPR Claim without the Client's prior written consent (not to be unreasonably withheld).

41.18 If an IPR Claim is made the Tram Supplier may, at its own expense and sole option, either:

41.18.1 procure for the Client and, where relevant, the Client Parties (without further payment or further restriction on the part of the Client or such Client Parties) the right to continue using the relevant part or parts of the Tram or Tram Related Equipment which is subject to the IPR Claim; or

41.18.2 replace or modify or procure the replacement or modification of the relevant part or parts of the Tram or Tram Related Equipment with non-infringing substitutes provided that those substitutes do not adversely affect the performance or material functionality of the same.

41.19 If the Tram Supplier has availed itself of its rights to replace or modify or procure the replacement or modification of the relevant part or parts of the Tram or Tram Related Equipment with non-infringing substitutes pursuant to Clause 41.18.2 or to procure the right to continue using the relevant part or parts of the Tram or Tram Related Equipment under Clause 41.18.1 and if such exercise of the said rights has avoided any claim, demand or action for infringement or alleged infringement, then the Tram Supplier shall have no further liability

TIE00899939_0127

thereafter in respect of the said claim, demand or action save in respect of any and all Losses, damages, costs or expenses and other liabilities (including legal fees) incurred by the Client during the period of any IPR Claim, (which costs shall be recoverable on an indemnity basis as provided in Clause 41.14).

41.20 If the Tram Supplier elects to modify the item(s) or to supply substitute item(s) pursuant to Clause 41.18.2 or to procure a licence in accordance with Clause 41.18.1, but this has not avoided or resolved the IPR Claim, the Client may (without prejudice to its other rights and remedies) terminate this Agreement by written notice with immediate effect.

Retention and Liquidated Damages for Delay

41.21 Subject to Clause 41.23, if any Tram is not delivered to the Depot by the Agreed Delivery Date for such Tram the Tram Supplier shall pay to the Client (or the Client shall be entitled to retain from payments to the Tram Supplier) a sum equal to 1% of the Tram Price payable in respect of such Tram ("**Delivery Retention**").

41.22 Subject to Clause 41.23, if:

41.22.1 the first Tram to be issued with a Certificate of Tram Commissioning is not issued with such certificate by the Agreed Commissioning Date the Tram Supplier shall pay Liquidated Damages to the Client at the rate of 1% of the Tram Price for each period of seven days (with an apportionment on a time basis for each part period) by which the issue of such Certificate of Tram Commissioning is delayed after the Agreed Commissioning Date and until such a Certificate of Tram Commissioning is issued in respect of such Tram; and

41.22.2 any other Tram to be issued with a Certificate of Tram Commissioning is not issued with such certificate by the Agreed Commissioning Date the Tram Supplier shall, in respect of each such Tram, pay Liquidated Damages to the Client at the rate of 0.5% of the Tram Price for each period of seven days (with an apportionment on a time basis for each part period) by which the issue of such Certificate of Tram Commissioning is delayed after the Agreed Commissioning Date and until such a Certificate of Tram Commissioning is issued in respect of such Tram.

41.23 If any Tram in respect of which a Delivery Retention has been made pursuant to Clause 41.21 is issued with a Certificate of Tram Commissioning on or before the Agreed Commissioning Date for such Tram then the Client shall release the Delivery Retention in respect of such

TIE00899939_0128

Tram to the Tram Supplier ("**Delivery Retention Repayment**") in accordance with Clause 38 (*Price and Payment*).

41.24 If Liquidated Damages are payable pursuant to Clause 41.21 in respect of a Tram which has had a Delivery Retention made in respect of it, then:

41.24.1 the Liquidated Damages payable in respect of such Tram shall be initially payable from the Delivery Retention until such Delivery Retention is exhausted or the full quantum of Liquidated Damages has been paid to the Client;

41.24.2 any outstanding Liquidated Damages shall remain payable by the Tram Supplier to the Client;

41.24.3 if, following the payment of Liquidated Damages in accordance with Clause 41.22.1 any of the sums retained as a Delivery Retention in respect of such Tram remains then such sum shall be repaid to the Tram Supplier as a Delivery Retention Repayment.

41.25 The aggregate amount of Liquidated Damages that the Tram Supplier shall be obliged to pay pursuant to Clause 41.21 shall be capped at 10% of the Aggregate Tram Price.

Liquidated Damages for Weight

41.26 If a Tram exceeds the Maximum Tram Weight, as calculated in accordance with part 2 of Schedule 5 (*Payments*), then the Tram Supplier shall pay liquidated damages in respect of each such Tram of an amount calculated in accordance with part 2 of Schedule 5 (*Payments*) provided that if the amount that a Tram is overweight is equal to or more than an amount equal to five per cent of the Maximum Tram Weight, the Client shall without prejudice to its other rights or remedies be entitled to reject the Tram.

General

41.27 The parties hereby acknowledge and confirm that the Liquidated Damages payable pursuant to this Agreement at the rate pre-agreed in this Clause 41 (*Liability, Indemnities, Retention and Liquidated Damages*) represent a genuine pre-estimate of the loss that is anticipated to be suffered by the Client consequent to a failure by the Tram Supplier to comply with those obligations under this Agreement to which they relate.

TIE00899939_0129

42. MAINTENANCE HANDOVER

42.1 Prior to termination or completion of the Tram Works, the Tram Supplier shall establish appropriate handover procedures with the Client and the Tram Supplier in respect of the maintenance pursuant to Clause 7.2.7.

42.2 For a minimum period of at least two years after termination or completion of the Tram Works but as long as practicable thereafter, the Tram Supplier shall provide the Client and **tie** with such access as each party may reasonably require to persons having the appropriate knowledge and experience of the Trams and associated technical matters for the following purposes:

42.2.1 general technical advice on subjects for which the Tram Supplier was responsible pursuant to this Agreement; and

42.2.2 interpretation of any maintenance history data, drawing modifications, and regulations.

42.3 Upon termination or completion of the Tram Works, the Tram Supplier shall procure that the Client is provided with (with copies to the Tram Supplier) all manuals and documentation used by the Tram Supplier in connection with the provision of maintenance pursuant to Clause 7.2.6.

43. MITIGATION

43.1 The Client and the Tram Supplier shall take all reasonable steps to minimise the adverse effects of any Relief Event, Force Majeure Event or Compensation Event (including by seeking damages from third parties or other remedies where proceedings would have a reasonable chance of success and would not be economically imprudent having regard to the likely level of damages or the nature of the remedies and the estimated cost of the proceedings) and any claim made by the Tram Supplier as a result of such event shall:

43.1.1 exclude any amounts incurred or to be incurred as a result of any failure of the party being compensated to comply with this Clause 43 (*Mitigation*); and

43.1.2 be reduced by any amount which the party being compensated will recover or has recovered under any insurance policy (or would have recovered, if it had complied with the terms of this Agreement or if it and the insurer had complied with the terms of any policy required under this Agreement).

TIE00899939_0130

44. BONDS AND COLLATERAL WARRANTY

44.1 On the Effective Date, the Tram Supplier shall provide to **tie** an Advance Payment Bond in an amount of 20% of the Aggregate Tram Price substantially in the form of part C, of Schedule 10 (*Bonds and Collateral Warranty*) and issued by a surety approved in advance by **tie**, such approval not to be unreasonably withheld or delayed.

44.2 The Tram Supplier shall procure on or before the planned delivery date for the first Tram pursuant to the Tram Manufacturing and Delivery Programme (or if earlier, before the actual delivery date of such Tram) a Performance Bond to the Client to a value of 5% of the Aggregate Tram Price which has been issued by a surety approved in advance by the Client (acting reasonably).

44.3 On the date on which the Tram Inspector certifies the twenty seventh Certificate of Tram Commissioning, the Performance Bond shall be released by the Client, and the Tram Supplier shall provide a Reliability Bond to the Client to a value of 5% of the Aggregate Tram Price substantially in the form of part A, of Schedule 10 (*Bonds and Collateral Warranty*) and issued by a surety approved in advance by the Client, such approval not to be unreasonably withheld or delayed.

44.4 The Tram Supplier shall commence testing the Reliability of each Tram upon the commencement of Passenger Services. If, on the expiry of 13 full Reporting Periods from the commencement of Passenger Services the Tram Supplier has failed to establish Reliability in respect of any Tram then the Client shall be entitled to call upon and retain the Reliability Bond. For the avoidance of doubt, retention of the Reliability Bond shall not be the Client's sole remedy in respect of any failure by the Tram Supplier to establish Reliability in respect of any Tram.

44.5 Within 20 days of any written request from the Client (or such longer period as the Parties, acting reasonably, may agree), the Tram Supplier shall execute a collateral warranty (in the form set out in part B of Schedule 10 (*Bonds and Collateral Warranty*) or where such form is not acceptable, in a different form which is acceptable to both Parties (acting reasonably) in favour of **tie**, CEC, Transport Scotland, TEL and any other party at the Client's reasonable request, in respect of carrying out the Tram Works.

45. TRAM SUPPLIER DELAYS

45.1 If, at any time, the Tram Supplier becomes aware that it will not (or is unlikely to) achieve any Milestone or meet an Agreed Delivery Date for any reason which is not a Relief Event

TIE00899939_0131

("**Delay**") it shall notify the Client's Representative in writing. The Tram Supplier shall detail in the notice:

45.1.1 the reasons for the Delay;

45.1.2 the consequences of the Delay; and

45.1.3 how the Tram Supplier proposes to mitigate the Delay.

45.2 If the Tram Supplier fails to achieve a Milestone and/or meet an Agreed Delivery Date it shall:

45.2.1 take and/or procure the taking of all remedial action necessary to correct the failure and achieve the Milestone and/or meet the Agreed Delivery Date as soon as practicable;

45.2.2 if relevant, pay liquidated damages in accordance with Clause 41 (*Liability, Retention and Liquidated Damages*); and

45.2.3 use all reasonable endeavours to mitigate the Delay and the effects of the Delay.

45.3 If a Milestone is not achieved and/or Agreed Delivery Date not met, the Client may (without prejudice to the Client's other rights and remedies) choose to:

45.3.1 if relevant accept the Tram "as is" subject to a reduction in the applicable Tram Price which reflects the reduced value of the Tram to CEC (such reduction to be agreed between the Parties, both acting reasonably or in the absence of agreement to be determined by the Tram Inspector (acting as an expert and not as an arbitrator) and whose decision shall be binding on the Parties in the absence of manifest error); or

45.3.2 extend, via the change control process in accordance with Clause 20 (*Changes*), the applicable Milestone date and/or Agreed Delivery Date within the Tram Manufacturing and Delivery Programme, and the Deliverables Programme.

45.4 Save as expressly stated to the contrary, any disputes about or arising out of this Clause 45 (*Tram Supplier Delays*) shall be resolved through the Dispute Resolution Procedure. Pending the resolution of the dispute the Tram Supplier shall continue to resolve the causes of and mitigate the effects of the Delay.

46. NOT USED

TIE00899939_0132

47. RELIEF EVENTS

47.1 The Tram Supplier shall within 10 Business Days of it becoming aware of the occurrence of an event which is likely to result in a Relief Event which may cause a delay in relation to the Tram Supplier achieving a Milestone and/or meeting an Agreed Delivery Date ("**Potential Relief Event**") serve a notice in writing ("**Potential Relief Event Notice**") on the Client:

47.1.1 stating the Tram Supplier's current view of the likelihood and probable extent of the delay relating to the Potential Relief Event; and

47.1.2 specifying whether the Tram Supplier is of the view that it is, or may become, entitled to an extension of time if the Potential Relief Event becomes a Relief Event.

47.2 If and to the extent that a Relief Event is the direct cause of a delay in achievement of a Milestone and/or an Agreed Delivery Date, then the Tram Supplier shall be entitled to apply for an extension of time. The Tram Supplier's sole right to such extension of time in connection with a Relief Event shall be as set out in this Clause 47 (*Relief Events*).

47.3 To obtain such extension of time, the Tram Supplier must, as soon as practicable, and in any event within 10 Business Days after it first became aware that the Relief Event had caused or is likely to cause delay:

47.3.1 give to the Client a notice of its claim for an extension of time and full details of the nature of the Relief Event, the date of occurrence and its likely duration;

47.3.2 include in any notice given under Clause 47.3.1 full details of the extension of time claimed including:

47.3.2.1 the Tram Supplier's estimate of the likely effect of such delay upon the Tram Manufacturing and Delivery Programme;

47.3.2.2 mitigation measures adopted and why unsuccessful; and

47.3.2.3 any acceleration measures which the Tram Supplier could take to mitigate the effects of such delay and, where applicable, an estimate of the costs thereof

provided that where a Relief Event has a continuing effect or the Tram Supplier is unable to determine whether the effect of the Relief Event will actually cause it not to be able to comply with its obligations under this Agreement, such that it is not practicable for the Tram Supplier to submit full details in accordance with this Clause 47.3, then the Tram Supplier shall instead submit to the Client:

TIE00899939_0133

(a) a statement to that effect with reasons, together with interim written particulars (including an estimate of the likelihood and the likely extent of the delay); and

(b) thereafter, further interim written particulars until the actual delay caused is ascertainable, whereupon the Tram Supplier shall as soon as reasonably practicable, submit to the Client the items referred to in Clause 47.3.2.

47.3.3 demonstrate to the reasonable satisfaction of the Client that:

47.3.3.1 the Tram Supplier and the Tram Supplier Parties could not have foreseen the occurrence or consequences of the relevant Relief Event and could not have avoided such occurrence or consequences by steps which they might reasonably be expected to have taken;

47.3.3.2 the Relief Event is the direct cause of the delay; and

47.3.3.3 the Tram Supplier is using best endeavours to perform its obligations under this Agreement.

47.4 In the event that the Tram Supplier has complied with its obligations under Clause 47.3 and the Client is satisfied as to the matters specified in Clause 47.3.3, then (as applicable in the circumstances) the Milestone and/or Agreed Delivery Date shall be postponed by such time as shall be reasonable for such a Relief Event, taking into account the likely effect of delay and the Tram Manufacturing and Delivery Programme shall be revised accordingly by the Tram Supplier. For the avoidance of doubt, the Tram Supplier shall be deemed to have waived any entitlement to an extension of time unless the Tram Supplier has submitted a notice under Clause 47.3 within 10 Business Days.

47.5 If the Client decides that the Tram Supplier is not entitled to an extension of time, the Client shall notify the Tram Supplier accordingly as soon as reasonably practicable in writing.

47.6 The Tram Supplier shall notify the Client if at any time it receives or becomes aware of any further information relating to the Relief Event, giving details of that information to the extent that such information is new or renders information previously submitted materially inaccurate or misleading. If the Client's Representative considers that the Tram Supplier is no longer entitled to the extension granted to it pursuant to this Clause 47 (*Relief Events*) because of such new, inaccurate or misleading information then the Client shall be entitled to notify the Tram Supplier in writing that it has terminated the extension. Provided always that the Tram

TIE00899939_0134

Supplier shall be deemed to have complied with its obligations under this Agreement during the time when the extension was granted.

47.7 If the Parties cannot agree the extent of the extension of time required or the Client disagrees that a Relief Event has occurred (or as to its consequences) or that the Tram Supplier is entitled to any extension of time, either Party may refer the matter for determination in accordance with the Dispute Resolution Procedure.

47.8 The Client shall, in assessing any delay or extension of time for the purpose of this Clause 47 (*Relief Events*):

47.8.1 not take into account:

47.8.1.1 any event or cause of delay which is in any way consequent upon or necessitated by any negligence, omission, default, breach of contract or breach of statutory duty of the Tram Supplier or any Tram Supplier Parties; or

47.8.1.2 any delay which is concurrent with another delay for which the Tram Supplier is responsible; or

47.8.2 take into account an event or cause of delay only if and to the extent that the Tram Supplier establishes to the satisfaction of the Client that the Tram Supplier has used its best endeavours to adjust the order and sequence in which the Tram Supplier proposes to execute the Tram Works in such a manner as to minimise the effects of the delay in, or if possible to avoid altogether any delay in, the progress of the Tram Works.

47.9 The Tram Supplier shall not be entitled to and shall be deemed to have irrevocably waived any entitlement to any extension of time in respect of any failure by the Tram Supplier to:

47.9.1 identify any long lead time works and/or order any long lead time materials; or

47.9.2 manage the required interface with any Approval Body and/or third party where consent or approval for the Tram Works is required at any stage of such works; or

47.9.3 identify any instructions which are required from the Client in order to progress the Tram Works in accordance with the Tram Manufacturing and Delivery Programme.

47.10 If the Tram Works are delayed in circumstances other than those entitling the Tram Supplier to an extension of time as set out in this Clause 47 (*Relief Events*), the Tram Supplier shall inform the Client at the earliest opportunity and shall give an estimate of the likely effect upon the Tram Manufacturing and Delivery Programme. In such circumstances, the Tram Supplier

TIE00899939_0135

at its own expense shall take such acceleration measures as are necessary to achieve the requirements of the Tram Manufacturing and Delivery Programme.

47.11 Notwithstanding the occurrence of a Relief Event, the Tram Supplier shall continue to carry out the Tram Works unless otherwise agreed in connection with this Clause 47 (*Relief Events*), except in cases of a Force Majeure Event affecting the Tram Supplier's manufacturing capability.

47.12 The Tram Supplier acknowledges and agrees that:

47.12.1 subject to Clause 47.12.2, any extension of time given by the Client's Representative under this Clause 47 (*Relief Events*) to a Milestone and/or to an Agreed Delivery Date shall not of itself entitle the Tram Supplier to any extension to any other Milestone and/or Agreed Delivery Date or any other period and the Tram Supplier must make a claim under this Clause 47 (*Relief Events*) for an extension of time to each date or period to which it considers it is, or may become, entitled under this Clause 47 (*Relief Events*);

47.12.2 the Client shall be entitled (in its absolute discretion) to include within an extension, an extension to any other Milestone and/or Agreed Delivery Date;

47.12.3 any extension of time granted by the Client to the Tram Supplier shall, except as expressly provided elsewhere in this Agreement, be in full compensation and satisfaction for any loss sustained or sustainable by the Tram Supplier in respect of any matter or thing in connection with which that extension is granted;

47.12.4 the Client may grant an extension of time at any time, whether prospective or retrospective, whether interim or in full and the Client's Representative shall not be bound by or limited to the grounds (if any) set out in the Tram Supplier's relief event notice; and

47.12.5 the procedures to be followed where the occurrence of a delay has been caused by a Client Change shall be those set out in Clause 20 (*Changes*) and not this Clause 47 (*Relief Events*).

48. QUALIFYING CHANGES IN LAW

48.1 If a Qualifying Change in Law occurs or is to occur, then either Party may write to the other to express an opinion on its likely effects, giving details of its opinion of:

MG

TIE00899939_0136

48.1.1 any necessary change in the Tram Works;

48.1.2 whether any changes are required to the terms of this Agreement to deal with the Qualifying Change in Law; or

48.1.3 whether relief from compliance with any obligations under this Agreement is required as a result of the Qualifying Change in Law,

48.1.4 in each case giving in full detail the procedure for implementing the Qualifying Change in Law. Responsibility for any costs of such implementation (and any resulting variation to payments due under this Agreement or other payment method at the Client's discretion) shall be dealt with in accordance with Clauses 48.2 and 48.3 below.

48.2 As soon as reasonably practicable after receipt of any notice from either Party under Clause 48.1 above, the Parties shall discuss and agree the issues referred to in Clause 48.1 above and any ways in which the Tram Supplier can mitigate the effect of the Qualifying Change in Law and the Tram Supplier shall:

48.2.1 provide evidence to the Client that the Tram Supplier has used and will continue to use all reasonable endeavours (including where appropriate and practicable the use of competitive quotes) to minimise any increase in costs and maximise any reduction in costs;

48.2.2 demonstrate how the effects of the Qualifying Change in Law will be mitigated;

48.2.3 demonstrate that the relevant changes will be implemented in the most cost-effective manner, including showing where reasonably practicable, that when any expenditure is incurred relevant Changes in Law that are foreseeable at the time of consideration of the specific Qualifying Change in Law and which relate to that Qualifying Change in Law have been taken into account by the Tram Supplier; and

48.2.4 give evidence, where reasonably practicable, as to how the Qualifying Change in Law has affected the fees and/or costs of similar contractors.

48.3 As soon as reasonably practicable after the issues referred to in Clause 48.2 have been agreed between the Parties or determined pursuant to the Dispute Resolution Procedure, the Client shall give a Client Notice of Change and the provisions of Clause 20 (*Changes*) shall apply except that the Tram Supplier shall be obliged to implement the change in all circumstances (except to the extent that such change is not necessary to implement the Qualifying Change in

TIE00899939_0137

Law). The Client shall issue a Client Change Order once it has been agreed or determined pursuant to the Dispute Resolution Procedure. In assessing the value of the change, the Client shall pay the agreed amount less the agreed threshold of £30,000 for each and every event. The Client will, at its sole discretion, determine the scope of each and every event.

48.4 Except as otherwise expressly provided in this Agreement, the Tram Supplier shall be responsible for any increase in its costs and shall not be entitled to any relief from its obligations under this Agreement to the extent that the same is caused as a result of a General Change in Law.

49. COMPENSATION EVENTS

49.1 If and to the extent that a Compensation Event:

49.1.1 is the direct cause of delay in achievement of a Milestone and/or an Agreed Delivery Date (as appropriate); and/or

49.1.2 causes the Tram Supplier to incur costs beyond such costs which were reasonably anticipated to be incurred by the Tram Supplier,

then the Tram Supplier shall be entitled to apply for an extension of time and/or claim costs under this Agreement. The Tram Supplier's sole right to an extension of time and/or to claim costs in connection with a Compensation Event shall be as set out in this Clause 49 (*Compensation Events*).

49.2 To obtain such extension of time and/or claim costs, the Tram Supplier must, as soon as practicable, and in any event within 10 Business Days after it first became aware that the Compensation Event had caused or is likely to cause delay or the Tram Supplier to incur additional costs:

49.2.1 give to the Client a notice of its claim for an extension of time and/or costs and full details of the nature of the Compensation Event, the date of occurrence and its likely duration;

49.2.2 include in any notice given under Clause 49.2.1 full details of the extension of time and/or any costs claimed including:

49.2.2.1 the Tram Supplier's estimate of the likely effect of such delay upon the Tram Manufacturing and Delivery Programme;

49.2.2.2 details of the costs;

TIE00899939_0138

49.2.2.3 mitigation measures adopted and why unsuccessful; and

49.2.2.4 any acceleration measures which the Tram Supplier could take to mitigate the effects of such delay and, where applicable, an estimate of the costs thereof; and

49.2.3 demonstrate to the reasonable satisfaction of the Client that:

49.2.3.1 the Tram Supplier and the Tram Supplier Parties could not have foreseen the occurrence or consequences of the relevant Compensation Event and could not have avoided such occurrence or consequences by steps which they might reasonably be expected to have taken;

49.2.3.2 the Compensation Event is the direct cause of the delay and/or the additional costs; and

49.2.3.3 the Tram Supplier is using best endeavours to perform its obligations under this Agreement.

49.3 In the event that the Tram Supplier has complied with its obligations under Clause 49.2 and the Client is satisfied as to the matters specified in Clause 49.2.3, then (as applicable in the circumstances):

49.3.1 the Milestone and/or Agreed Delivery Date shall be postponed by such time as shall be reasonable for such a Compensation Event, taking into account the likely effect of delay and the Tram Manufacturing and Delivery Programme shall be revised accordingly by the Tram Supplier; and/or

49.3.2 the Tram Supplier shall be paid the amount of any direct and demonstrable cost as may be reasonable in the circumstances of the Compensation Event.

For the avoidance of doubt, the Tram Supplier shall be deemed to have waived any entitlement to an extension of time unless the Tram Supplier has submitted a notice under Clause 49.2 within 10 Business Days.

49.4 The Tram Supplier shall notify the Client if at any time it receives or becomes aware of any further information relating to the Compensation Event, giving details of that information to the extent that such information is new or renders information previously submitted materially inaccurate or misleading. If the Client's Representative considers that the Tram Supplier is no longer entitled to the extension granted to it pursuant to this Clause 49 (*Compensation Events*)

TIE00899939_0139

because of such new, inaccurate or misleading information then the Client shall be entitled to notify the Tram Supplier in writing that it has terminated the extension. Provided always that the Tram Supplier shall be deemed to have complied with its obligations under this Agreement during the time when the extension was granted.

49.5 If the Parties cannot agree the extent of the extension of time required or the additional costs claimed or the Client disagrees that a Compensation Event has occurred (or as to its consequences) or that the Tram Supplier is entitled to any extension of time and/or additional costs, either Party may refer the matter for determination in accordance with the Dispute Resolution Procedure.

49.6 The Client shall, in assessing any delay or extension of time or costs for the purpose of this Clause 49 (*Compensation Events*):

49.6.1 not take into account:

49.6.1.1 any event or cause of delay or costs which is in any way consequent upon or necessitated by any negligence, omission, default, breach of contract or breach of statutory duty of the Tram Supplier or any Tram Supplier Parties; or

49.6.1.2 any delay which is concurrent with another delay for which the Tram Supplier is responsible; or

49.6.2 take into account an event or cause of delay or costs only if and to the extent that the Tram Supplier establishes to the satisfaction of the Client that the Tram Supplier has used its best endeavours to adjust the order and sequence in which the Tram Supplier proposes to execute the Tram Works in such a manner as to minimise the effects of the delay in, or if possible to avoid altogether any delay in, the progress of the Tram Works and mitigate the costs.

49.7 The Tram Supplier shall not be entitled to and shall be deemed to have irrevocably waived any entitlement to any extension of time and/or additional costs in respect of any failure by the Tram Supplier, to:

49.7.1 identify any long lead time works and/or order any long lead time materials; or

49.7.2 manage any required interface with any Approval Body and/or third party where consent or approval for the Tram Works is required at any stage of such works; or

TIE00899939_0140

49.7.3 identify any instructions which are required from the Client in order to progress the Tram Works in accordance with the Tram Manufacturing and Delivery Programme.

49.8 If the Tram Works are delayed in circumstances other than those entitling the Tram Supplier to an extension of time as set out in this Clause 49 (*Compensation Events*), the Tram Supplier shall inform the Client at the earliest opportunity and shall give an estimate of the likely effect upon the Tram Manufacturing and Delivery Programme. In such circumstances, the Tram Supplier at its own expense shall take such acceleration measures as are necessary to achieve the requirements of the Tram Manufacturing and Delivery Programme.

49.9 Notwithstanding the occurrence of a Compensation Event, the Tram Supplier shall continue to carry out the Tram Works unless otherwise agreed in connection with this Clause 49 (*Compensation Events*).

49.10 Notwithstanding any other provision of this Clause 49 (*Compensation Events*), if a Compensation Event occurs because the Depot is not ready to accept delivery of the Trams following the issue of the Factory Acceptance Type Test Certificate and Factory Acceptance Routine Certificate in respect of a Tram in accordance with Clause 28 (*Pre-Delivery Inspections and Factory Acceptance Tests*) then:

49.10.1 unless directed otherwise by the Client in writing, the Trams which cannot be delivered shall be stored by the Tram Supplier in the most practicable and cost effective location and manner; and

49.10.2 the Tram Supplier shall promptly remove the Trams from storage and deliver the Trams to the Depot in accordance with the terms of this Agreement when the Client notifies the Tram Supplier in writing that the Depot is ready to accept delivery of the Trams.

50. BEST VALUE

50.1 The Tram Supplier shall provide reasonable assistance, throughout the Term and to the extent consistent with its obligations under this Agreement, make arrangements to secure continuous improvement in the way in which the Tram Works are conducted having regard to the Project Vision and, a combination of economy, efficiency and effectiveness.

50.2 The Tram Supplier agrees to undertake (or refrain from undertaking) such actions as the Client shall reasonably request, and shall:

TIE00899939_0141

50.2.1 prepare and, support and assist the Client (in compliance with Clause 24 (*Audit and Inspection*)) in preparing best value performance plans and conducting best value reviews in relation to the Tram Works;

50.2.2 comply with requests for information, data or other assistance made by the Client in pursuance of its best value assessment; and

50.2.3 comply with all requests by the Client, acting reasonably, to procure the attendance of specific officers or employees of the Tram Supplier or Tram Supplier Parties at any Client meetings and **tie** meetings at which the Tram Works are to be discussed.

50.3 The Tram Supplier acknowledges that **tie** may undertake an annual customer satisfaction survey ("**tie Customer Satisfaction Survey**") in order to:

50.3.1 assess satisfaction among the public and passengers with the quality, efficiency and effectiveness of the Tram Works;

50.3.2 complement preparation of the Annual Service Report; and

50.3.3 monitor compliance by the Tram Supplier with its obligations including its management of the Tram Works,

and the Tram Supplier shall provide reasonable assistance to enable the Client and **tie** to undertake the **tie** Customer Satisfaction Survey.

50.4 Without prejudice to any other provision in this Agreement (and no later than 2 Reporting Periods prior to the end of any year), the Tram Supplier shall, at its own cost, provide a written report (the "**Annual Service Report**") which shall review the quality and performance of all Tram Works measured during the relevant period and show the key issues to be addressed going forward, including customer feedback, operational and maintenance issues and improvement proposals. The customer feedback shall include the results of any **tie** Customer Satisfaction Survey carried out pursuant to Clause 50.3. The Tram Supplier shall upon written request promptly provide supporting information to verify and audit the information and other material contained in the Annual Service Report.

50.5 The Client may make comments on and/or objections to and/or specify omissions in the supporting information or the Annual Service Report and in such case shall provide the Tram Supplier with written comments and/or objections within 40 Business Days of receipt. In the absence of such Client comments or objections, the supporting information (or the Annual Service Report) shall be deemed to have been accepted by the Client.

TIE00899939_0142

50.6 The Tram Supplier shall, within 25 Business Days of receipt of the Client comments and/or objections under Clause 50.5 make revisions having regard to such comments and/or objections and resubmit the information and report to the Client. If the information and reports cannot be agreed by the Parties then the matter will be determined in accordance with the Dispute Resolution Procedure.

50.7 If, in the Client's reasonable opinion, the provision and performance of the Tram Works could be more effective, efficient and economic having regard to the Annual Service Report and the **tie** Customer Satisfaction Survey, then the Client may serve an Client Notice of Change pursuant to Clause 20 *(Changes)* stating the desired nature and timing of the changes to the provision or performance of the Tram Works (or the relevant part thereof).

50.8 The Tram Supplier shall, in conjunction with the Client, develop Best Value Improvement Plans setting out mutually agreed tasks between the Tram Supplier and the Client to improve the delivery of the Tram Works, and demonstrate continuous improvement in the Tram Works, and the achievement of the Project Vision.

50.9 The preparation of Best Value Improvement Plans will take into account the conclusions from the Annual Service Report and the **tie** Customer Satisfaction Surveys.

51. COPYRIGHT AND INTELLECTUAL PROPERTY

51.1 All Tram Supplier IPR shall continue to be owned by the Tram Supplier.

51.2 The Tram Supplier hereby:

51.2.1 assigns by way of future assignation to the Client with full title guarantee the Project IPR which is created by it and shall procure that Project IPR created by any Tram Supplier Party is also so assigned, for all of the residue of the term of such rights and all renewals or extensions thereof and together with all accrued causes of action in respect thereof;

51.2.2 grants to the Client a non-exclusive perpetual irrevocable royalty free licence to use such Tram Supplier IPR as may be necessary for the Client to use in relation to the Tram Supplier's scope of supply and having regard to the operating, maintaining and repairing of the Edinburgh Tram Network, and including any and all Intellectual Property Rights which subsist at any time in:

51.2.2.1 the Tram Documentation;

TIE00899939_0143

51.2.2.2 the Trams; and

51.2.2.3 Spare Parts and/or Special Tools.

For clarity, nothing within this sub-clause shall permit the Client to use Tram Supplier IPR for any commercial or tendering purposes (except by CEC, TEL or **tie** Limited in connection with the extension or expansion of the infrastructure of the Edinburgh Tram Network). Such Tram Supplier IPR shall not, without the express written consent of the Tram Supplier, be used, copied or disclosed in whole or in part by the Client other than for the purposes outlined in this Clause 51.2.2;

51.2.3 grants to the Client, with the prior written consent of the Tram Supplier (such consent not to be unreasonably withheld or delayed) the right to grant non-exclusive non-assignable sub-licences to third parties for such lengths of time as the Client may reasonably require and otherwise on the same terms as the licence granted to the Client pursuant to Clause 51.2.2 above, to use the Tram Supplier IPR referred to in that Clause (other than in relation to Third Party Software in respect of which the Tram Supplier shall use its reasonable endeavours to obtain the grant of a license to use such Software in so far as is necessary or desirable for such third party to use such Tram Supplier IPR in relation to any projects associated with the Tram Works including in relation to any extension or expansion of the Edinburgh Tram Network;

51.3 The Tram Supplier shall promptly deliver to the Client copies of all Tram Supplier IPR licensed to the Client pursuant to this Clause 51 (*Copyright and Intellectual Property*).

51.4 For the avoidance of doubt, the persons to whom the Client may grant sub-licences pursuant to Clause 51.2.3 shall include:

51.4.1 **tie** and any **tie** Party;

51.4.2 any Client Party;

51.4.3 the Operator and any party other than the Operator providing support to **tie** in relation to the System;

51.4.4 the SDS Provider;

51.4.5 the Tram Maintainer;

51.4.6 CEC and Transport Edinburgh Limited with the prior written consent of the Tram Supplier such consent not to be unreasonably withheld

TIE00899939_0144

51.4.7 any assignee or transferee under this Agreement;

51.4.8 any party providing maintenance in respect of the Edinburgh Tram Network.

51.5 The Client hereby grants to the Tram Supplier a non-exclusive revocable royalty free licence for the duration of this Agreement to use such Project IPR as is owned by it as may be necessary for the Tram Supplier to use solely and exclusively for the purpose of performing the Tram Works.

51.6 The copyright of this Agreement and any data or software supplied to the Tram Supplier by the Client, shall remain solely with the Client.

51.7 The Tram Supplier shall at any time and from time to time hereafter at the request of the Client execute all such documents and do all such further acts as may be required in order to vest the rights referred to in Clause 51.2.1 in the Client.

51.8 The Tram Supplier waives any and all moral rights held or to be held by the Tram Supplier in the Deliverables and Project IPR and shall use best endeavours that all of the Tram Supplier Parties who are authors of the whole or any part of the Project IPR waive and abandon in writing all moral rights.

51.9 The Tram Supplier agrees that all rights in the Project IPR shall remain the property of the Client and the Tram Supplier shall retain no rights in the Project IPR beyond the licence granted in Clause 51.5. The Tram Supplier shall be entitled to use such Project IPR only on the terms set out herein and solely for the purpose of the performance of the Tram Works. In particular, otherwise as permitted in this Agreement herein, the Tram Supplier shall not disclose, assign, sub-license, lease, rent or otherwise dispose of the Project IPR.

51.10 The Client shall be entitled to use the rights granted to it pursuant to Clause 51.2 (and to sub-license to third parties such rights) to perform its obligations and exercise its rights and allow all Client Parties to perform their obligations and exercise their rights in respect of the Project, such performance of rights and exercise of obligations to include:

51.10.1 carrying out any necessary completion of the design, manufacture, construction and commissioning of any Trams and each part thereof;

51.10.2 carrying out any and all work in relation to the design and construction, testing and operation of the System;

TIE00899939_0145

51.10.3 carrying out all and any necessary maintenance, repairs and work including work to rectify any faults with the Spare Parts and Special Tools or breach of the Warranties and to modify them to comply with any Law or other mandatory requirements or otherwise;

51.10.4 making copies of using and reproducing in any format the Tram Documentation and all other documents which the Tram Supplier is required to deliver in accordance with this Agreement for the purposes of maintenance and repair of the Trams and/or the maintenance of the Spare Parts and Special Tools but only such copies as may be reasonably necessary to achieve such purpose; and

51.10.5 enabling and allowing relevant third parties to perform their obligations in respect of the Project.

51.11 For the purposes of this Clause 51 (*Copyright and Intellectual Property*), "use" shall include the acts of copying, modifying, adapting and translating the material in question and/or incorporating them with other materials and the term "the right to use" shall be construed accordingly.

51.12 The Tram Supplier:

51.12.1 hereby grants to the Client, free of charge, an irrevocable, perpetual, non-exclusive and transferable (but only to any assignee or transferee of any rights or benefits under this Agreement or upon or at any time following termination or expiry of this Agreement) a licence (carrying the right to grant sub-licences) to use the Intellectual Property Rights which are or become at any time during the Term vested in the Tram Supplier to the same extent as the Tram Supplier has acquired such rights; and

51.12.2 shall in respect of any of the Intellectual Property Rights which the Tram Supplier is not entitled to license to the Client pursuant to Clause 51.2, use its best endeavours to procure the grant of a licence from the owners of such Intellectual Property Rights in favour of the Client in substantially the same terms as the licence set forth in Clause 51.2.

51.13 The Client shall not exercise any of the rights licensed to it pursuant to this Clause 51 (*Copyright and Intellectual Property*) to design, construct, manufacture or commission or have designed, constructed, manufactured or commissioned any of the Trams or any part thereof unless and until:

TIE00899939_0146

51.13.1 the Client and the Tram Supplier cannot agree a price and/or delivery time in relation to a Spare Part or Special Tool pursuant to Clause 34.3; and/or

51.13.2 there occurs a Tram Supplier Default;

51.14 The Client shall not be entitled to adapt, reverse engineer, decompile, disassemble and/or modify the Tram Supplier Software in whole or in part except:

51.14.1 as permitted by Law; and

51.14.2 to the extent that such action is legitimately required for the purposes of integrating the operation of the Tram Supplier Software with the operation of other software or systems used by the Client or any of the Client Parties on the Edinburgh Tram Network.

51.15 All payments and royalties payable in one sum or by instalments or otherwise in connection with Intellectual Property Rights used by the Tram Supplier in connection with or to enable the Tram Supplier to carry out the Project or licensed to the Client shall be deemed to be included in the Aggregate Tram Price and shall be paid by the Tram Supplier to those to whom they may be due or payable.

51.16 Where a claim or proceeding is made or brought against the Client or its permitted licensees which arises out of the infringement of any Intellectual Property Rights in any materials provided by the Tram Supplier or any Tram Supplier Party to the Client then the Tram Supplier shall indemnify and keep the Client indemnified on demand at all times from and against all Indemnified Liabilities arising in connection with such claim or proceedings.

51.17 The provisions of this Clause 51 (*Copyright and Intellectual Property*) shall apply during the continuance of this Agreement and after its termination howsoever arising, and immediately following termination howsoever arising, the Tram Supplier shall provide the Client with:

51.17.1 a copy of the Object Code on media that is reasonably acceptable to the Client; and

51.17.2 a copy of all documentation, manuals and other technical information relating to the Software that is reasonably required by the Client;

51.18 The Tram Supplier shall not reproduce or publish any document or matter relating to the Tram Works or this Agreement, either alone or in association with any other body or person, without the prior written consent of the Client.

TIE00899939_0147

51.19 Software

51.19.1 In designing and creating Tram Supplier Software forming part of the Deliverables, the Tram Supplier shall ensure (and the Tram Inspector shall audit):

51.19.1.1 that orderly auditable records of the progress of the development of the Tram Supplier Software from the functional requirements to the final code are maintained, and that regular verification and testing occurs at each stage of the design process;

51.19.1.2 that it shall produce, during the development of the Tram Supplier Software comprehensive and accurate documentation including specifications, cause and effect charts and flowcharts are produced;

51.19.1.3 that the documentation, access rights, details of configuration software and the like produced in accordance with Clause 51.19.1.1, is such as to enable an appropriately qualified independent auditor (who is not involved in the original design) to:

(i) relate the Tram Supplier Software to the performance of the relevant equipment under normal and fault conditions;

(ii) to verify its compliance with the functional requirements of that equipment; and

(iii) to operate and reconfigure the Tram Supplier Software without the assistance of the Infraco; and

51.19.1.4 that the Tram Supplier Software is designed, developed and documented following an industry-recognised standard (and where no particular standard is required by the Upgrade Works Specifications or Central SCADA Works Specifications (as such terms are used in the Employer's Requirements)), using recognised quality control methods.

51.19.2 Subject to the terms of any Third Party Software Licence, the Tram Supplier shall to a reasonable extent, create or provide:

51.19.2.1 coding and documentation, in machine readable form, of the final structure of the Tram Supplier Software, and of the intermediate stages leading to it (i.e. source and object codes); and

TIE00899939_0148

51.19.2.2 where the Client so instructs, usable copies of any ancillary computer programs used to generate the code (such as compilers) provided that the Client meet the costs of any additional Third Party Software Licence.

51.19.3 Where the Tram Supplier is required to provide Tram Supplier Software as part of a Deliverable under this Agreement it shall, within thirty (30) days of acceptance of the Tram Supplier Software by the Client place, or shall procure the placement of, a copy of the source code of the Tram Supplier Software in escrow with the NCC Group of Manchester Technology Centre, Oxford Road, Manchester ("**NCC**") or such other escrow agent as the Parties may agree. The Parties shall enter into NCC's standard escrow agreement (provided that, in the case of Third Party Software, the Tram Supplier shall procure that the owner of such software enters into such escrow agreement) for a single licensee (or if no such agreement exists, the appropriate standard agreement as stipulated by NCC). The cost of such source code deposit (including all renewal costs) shall be payable by the Client.

Technical Library

51.20 The Tram Supplier shall;

51.20.1 as soon as reasonably practicable shall cooperate with the Client in the establishment by the Client of a secure, virtual electronic site for the storage of Deliverables other than the source code (the "**Technical Library**"). Such electronic site shall be capable of being accessed through a standard web browser. At the Client's request, the Tram Supplier will in addition also cooperate with the Client in delivering and managing documents to establish a physical site with paper copies of the Technical Library;

51.20.2 as and when Deliverables (other than the source code) are produced or updated from time to time:

51.20.2.1 where such Deliverables are produced or updated by the Tram Supplier, promptly ensure that a copy of those Deliverables or its updated version is placed in the Technical Library;

51.20.2.2 where such Deliverables are produced or updated by any sub-contractor of the Tram Supplier, as soon as reasonably practical ensure that a copy of those Deliverables or their updated version(s) are placed in the Technical Library;

51.20.2.3 establish an index, in a format approved by the Client, of all

TIE00899939_0149

Deliverables deposited in the Technical Library from time to time and update that index whenever any such Deliverables are deposited in the Technical Library;

51.20.2.4 deliver one copy of the index and each update established under Clause 51.20.2.3 to the Client; and

51.20.2.5 permit the Client (or its nominee) to have access to the Technical Library from time to time during normal business hours, and following reasonable notice from the Client (or its nominee) to the Tram Supplier, for the purpose only of auditing its contents against the current catalogue.

51.21 Within three Business Days of the earlier of the release of the Reliability Bond or the termination of this Agreement, the Tram Supplier shall hand over the Technical Library, and the secure access to it, to the Client and the Tram Supplier's obligations in relation to the further maintenance of the Technical Library shall cease. Should an audit of the contents of the Technical Library against the current catalogue reveal that the index does not contain details of categories or types of Deliverables which should be contained within the Technical Library, the Client may request and the Tram Supplier grants access to the Client to the Technical Library from time to time during business hours in order to audit the contents of the Technical Library to determine whether such categories and types of Deliverables are in fact contained within the Technical Library. Any such request shall be made with reasonable notice and shall indicate with reasonable clarity the technical information or the type of Deliverable which is required for review.

52. CONFIDENTIAL INFORMATION

52.1 Each Party:

52.1.1 shall treat all Confidential Information belonging to the other Party as confidential and safeguard it accordingly; and

52.1.2 shall not disclose any Confidential Information belonging to the other Party to any other person without the prior written consent of the other Party, or except to such persons and to such extent as may be necessary for the performance of this Agreement or except where disclosure is otherwise expressly permitted by the provisions of this Agreement.

52.2 Each Party shall take all necessary precautions to ensure that all Confidential Information obtained from the other Party, or **tie,** under or in connection with this Agreement:

TIE00899939_0150

52.2.1 is given only to such of the staff professional advisors and/or the Client Parties, Tram Supplier Parties or **tie** in connection with this Agreement as is strictly necessary for the performance by the Tram Supplier of the Tram Works and its other obligations under this Agreement; and

52.2.2 is treated as confidential and not disclosed (without prior approval from the owner of the Confidential Information) or used by such staff or professional advisors and/or the Tram Supplier Parties otherwise than for the purposes of this Agreement.

52.3 Where it is considered necessary in the opinion of the owner of the Confidential Information, the other Party shall ensure that its staff, contractors, agents, Sub-contractors, consultants and professional advisors sign a confidentiality undertaking before commencing work in connection with this Agreement.

52.4 Neither Party shall use any Confidential Information it receives from the other Party or **tie** other than for the purposes of this Agreement.

52.5 The provisions of Clauses 52.1 to 52.4 shall not apply to:

52.5.1 any information which is or becomes public knowledge (otherwise than by breach of this Clause 52 (*Confidential Information*));

52.5.2 any information which was in the possession of the receiving Party, without restriction as to its disclosure, before receiving it from the disclosing Party;

52.5.3 any information which is received from a third party who lawfully acquired it and who is under no obligation restricting its disclosure;

52.5.4 any information which is independently developed without access to the Confidential Information;

52.5.5 any disclosure pursuant to a statutory, legal or parliamentary obligation placed upon the Party making the disclosure, including any requirements for disclosure under FOISA, the Code, or the Environmental Information Regulations pursuant to Clauses 52.8 to 52.12(inclusive);

52.5.6 any disclosure by the Client of this Agreement including the Tram Supplier's fees and commercial terms, any information relating to the design of any aspect of the Edinburgh Tram Network and such other information as may be reasonably required

TIE00899939_0151

for the purpose of conducting a due diligence exercise with any candidates for other agreements relating to the System and their advisers;

52.5.7 any disclosure by the Client of this Agreement and any related information to **tie**, any **tie** Party, the Operator or any Client Party;

52.5.8 any information which is required to be disclosed to that Party's insurers and/or financial or legal advisers subject to Clauses 52.2 and 52.3;

52.5.9 any registration of information in respect of the Consents and any property registration required;

52.5.10 any disclosure of information by the Client and/or **tie** to Transport Edinburgh Limited, CEC, Partnerships UK Limited, the Scottish Ministers, Transport Scotland or any department, office or agency of the Scottish Executive or the UK government;

52.5.11 any disclosure for the purpose of any examination, pursuant to applicable Law, of the economy, efficiency and effectiveness with which **tie** has used its resources or funding made available to it including any examination pursuant to the Local Government (Scotland) Act 1973 as amended by the Local Government in Scotland Act 2003 of whether **tie** has secured best value in the performance of its functions; and

52.5.12 any disclosure of Confidential Information obtained from the Tram Supplier to:

52.5.12.1 any government department or any other local government authority or public authority equivalent in status to **tie.** All government departments or any other local government authority or public authority equivalent in status to **tie** receiving such Confidential Information shall be entitled to further disclose the Confidential Information to other government departments or any other local government authority or public authority equivalent in status to **tie** on the basis that the information is confidential and is not to be disclosed to a third party which is not part of any government department or any other local government authority or public authority equivalent in status to **tie**;

52.5.12.2 to any person engaged in providing any services to **tie** or the Client for any purpose relating to or ancillary to this Agreement, provided that in disclosing information under this Clause 52 (*Confidential Information*) the Client discloses only the information which is necessary for the purpose concerned and requires that the information is treated in confidence and that a confidentiality undertaking is given where appropriate.

TIE00899939_0152

52.6 Nothing in this Clause 52 (*Confidential Information*) shall prevent either Party from using any techniques, ideas or know-how gained during the performance of this Agreement in the course of its normal business, to the extent that this does not result in a disclosure of Confidential Information or an infringement of Intellectual Property Rights.

52.7 In the event that the Tram Supplier fails to comply with this Clause 52 (*Confidential Information*), the Client reserves the right to terminate the Agreement by notice in writing in accordance with Clause 55 (*Tram Supplier Default Termination*).

52.8 The Tram Supplier acknowledges that **tie** is subject to the requirements of FOISA and the Environmental Information Regulations and shall assist and cooperate with **tie** or the Client (at the Tram Supplier's expense) to enable **tie** or the Client to comply with these Information disclosure requirements. **tie** or the Client agrees that it shall comply with the terms of the Code in respect of the discharge of its obligations under FOISA.

52.9 The Tram Supplier shall and shall procure that the Tram Supplier Parties shall:

52.9.1 transfer any Request for Information to **tie** or the Client as soon as practicable after receipt and in any event within five Business Days of receiving a Request for Information;

52.9.2 provide **tie** or the Client with a copy of all information in its possession or power in the form that **tie** or the Client requires within five Business Days (or such other period as **tie** or the Client may specify) of **tie** requesting that information; and

52.9.3 provide all necessary assistance as reasonably requested by **tie** or the Client to enable **tie** to respond to a Request for Information within the time for compliance set out in section 10 of FOISA or regulation 5 of the Environmental Information Regulations.

52.10 **tie** shall be responsible for determining at its absolute discretion whether the Confidential Information and/or any other information:

52.10.1 is exempt from disclosure in accordance with the provisions of the Code, FOISA or the Environmental Information Regulations; and

52.10.2 is to be disclosed in response to a Request for Information,

52.11 In no event shall the Tram Supplier respond directly to a Request for information unless expressly authorised to do so by **tie**.

TIE00899939_0153

52.12 The Tram Supplier acknowledges that **tie** may be obliged, pursuant to the Code, FOISA, or the Environmental Information Regulations to disclose information:

52.12.1 without consulting with the Tram Supplier, or

52.12.2 following consultation with the Tram Supplier and having taken its views into account.

52.13 The Tram Supplier shall ensure that all information and Deliverables produced in the course of this Agreement or relating to this Agreement are retained for disclosure and shall permit the Client and **tie** to inspect such records as requested from time to time.

52.14 The Tram Supplier acknowledges that any lists or schedules provided by it outlining Commercially Sensitive Information are of indicative value only and that **tie** and/or the Client may nevertheless be obliged to disclose Confidential Information in accordance with Clause 52.8.

52.15 Any public relations material, press releases, public presentations or conference engagements in relation to this Agreement planned by the Tram Supplier require the Client's prior written approval.

53. PROTESTOR ACTION

53.1 If any Protestor Action occurs in respect of the Edinburgh Tram Network the Tram Supplier shall take whatever action and measures as are necessary to ensure the continued operation of its obligations under this Agreement during any relevant period of Protestor Action and to provide such support and assistance to the Client in relation to the Project as the Client may reasonably require.

53.2 In respect of any Protestor Action, if compliance with Clause 53.1 involves the Tram Supplier in any delay, the Client's Representative shall take such delay into account in determining any extension of time to which the Tram Supplier is entitled pursuant to Clause 49 *(Compensation Events*) provided that the Client shall not take into account any delay to the extent that the impact of such Protestor Action on the progress of the Tram Works has been caused by a breach of this Agreement by the Tram Supplier and/or such impact could have been mitigated by the Tram Supplier.

TIE00899939_0154

54. SUSPENSION OF WORK

54.1 The Client's Representative may, having received the written permission of **tie**, suspend the progress of the Tram Works or any part thereof, excluding the manufacture of Trams, for such time or times and in such manner as the Client's Representative may consider necessary. The Tram Supplier shall, during such suspension, properly protect and secure the work so far as is necessary in the opinion of the Client's Representative. Except to the extent that such suspension is:

54.1.1 otherwise provided for in this Agreement;

54.1.2 necessary by reason of some default on the part of the Tram Supplier; or

54.1.3 necessary for the proper completion or for the safety of the Tram Works or any part thereof in as much as such necessity does not arise from any act or default of the Client's Representative or Client,

then if compliance with the Client's Representative's instructions under this Clause 54 (*Suspension of Work*) involves the Tram Supplier in delay or extra cost, including the cost of storage at the Tram Supplier's own or an alternative facility, the Client's Representative shall take such delay into account in determining any extension of time or costs to which the Tram Supplier is entitled under Clause 49 (*Compensation Events*).

54.2 If the progress of the Tram Works or any part thereof is suspended on the written order of the Client's Representative and if permission to resume work is not given by the Client's Representative within a period of six months from the date of suspension then the Tram Supplier may unless such suspension is otherwise provided for in this Agreement or continues to be necessary by reason of some default on the part of the Tram Supplier serve a written notice on the Client's Representative requiring permission within 20 Business Days from the receipt of such notice to proceed with the Tram Works or that part thereof in regard to which progress is suspended. If within the said 20 Business Days the Client's Representative does not grant such permission, the Tram Supplier by a further written notice so served may (but it is not bound to) elect to treat the suspension where it affects part only of the works as an omission of such part under Clause 20 (*Changes*) or where it affects the whole Tram Works as an abandonment of this Agreement by the Client.

54.3 Within 45 Business Days of service of notice by the Tram Supplier in accordance with Clause 54.2 to treat any suspension as an abandonment of this Agreement, this Agreement shall be

TIE00899939_0155

terminated in whole and the provisions of Clause 62 (*Payment on Termination*) and Clause 63 (*Effect of Termination or Expiry*) shall apply.

55. TRAM SUPPLIER DEFAULT TERMINATION

55.1 Without prejudice to any of the Client's other rights or remedies, the Client may, subject to the approval of **tie** Limited, after giving 7 days notice in writing to the Tram Supplier terminate this Agreement in whole or in part on any of the following grounds set out in Clauses 55.1.1 to 55.1.11(each a "**Tram Supplier Default**"), and if this Agreement is terminated in part the Client may terminate this Agreement in respect of any one or more Trams on or following:

55.1.1 breach of any material provision or requirement of this Agreement, where the Client has by written notice requested rectification of such breach and the Tram Supplier has failed to rectify such breach within 10 Business Days.

55.1.2 any failure to pay any Liquidated Damages within a period of forty five days of the due date as specified in Clause 41 (*Liability, Retention and Liquidated Damages*);

55.1.3 any failure to meet a Milestone within 180 days of the date for completion;

55.1.4 the occurrence of any Insolvency Event in relation to the Tram Supplier or any Affiliate of the Tram Supplier;

55.1.5 any Change in Control of the Tram Supplier or any other change in the legal status of the Tram Supplier occurs which is materially prejudicial to carrying out and completing the Tram Works;

55.1.6 any abandonment of the Tram Works by the Tram Supplier without due cause; and/or

55.1.7 the total liability of the Tram Supplier under this Agreement would be in excess of 20% of the Aggregate Tram Price, save for the application of Clause 41.6;

55.1.8 the aggregate amount of Liquidated Damages payable by the Tram Supplier would be in excess of 10% of the Aggregate Tram Price save for the application of the cap pursuant to Clause 41.25;

55.1.9 conduct by the Tram Supplier in a manner which **tie,** reasonably considers to be incompatible with the performance of the Tram Works and/or in such a manner so as to wilfully detract from the image and reputation of **tie,** CEC, Transport Edinburgh Limited, the Scottish Executive, the Scottish Ministers or any project related to the performance of the Tram Works;

TIE00899939_0156

55.1.10 any breach of Clause 52 (*Confidential Information*);

55.1.11 any failure to resolve a conflict of interest in accordance with Clause 70 (*Conflict of Interest*) to the reasonable satisfaction of **tie**;

55.2 Without prejudice to Clause 55.1, the Client may (with the prior written consent of **tie**) terminate this Agreement in respect of one or more Trams if a Certificate of Tram Delivery and Certificate of Tram Commissioning are not issued in respect of a Tram within 12 months following delivery of that Tram to the Depot. The Parties agree that in the event that there is a delay in issuing the Certificate of Tram Delivery and Certificate of Tram Commissioning which has a material adverse effect on the ability of the Tram Supplier to perform its obligations under this Agreement and:

55.2.1 which is beyond the reasonable control of the Tram Supplier; or

55.2.2 to the extent that it is directly caused by a breach by the Client or any Client Party of their respective obligations under this Agreement, the Infraco Contract or the DPOFA (as the case may be),

the 12 month period shall be extended by a reasonable period to reflect such delay.

55.3 If the Client terminates this Agreement pursuant to this Clause 55 (*Tram Supplier Default Termination*), the provisions of Clause 62 (*Payment on Termination*) and Clause 63 (*Effect of Termination or Expiry*) shall apply.

55.4 The Tram Supplier shall, in so far as is permitted by the laws of Spain and only following public disclosure of such information notify the Client of:

55.4.1 any resolution or decision by the Tram Supplier or the board of directors of the Tram Supplier or a decision by any director of the Tram Supplier to seek legal or financial advice pertaining to the solvency of the Tram Supplier; and/or

55.4.2 any presentation of any petition for the purpose of winding up the Tram Supplier or any petition for an administration order.

55.5 In the event that the Client has grounds to service notice pursuant to Clause 55.1, the Client may elect to require the Tram Supplier to provide a rectification plan within 5 Business Days of the Client serving written notice requiring the Tram Supplier to provide such plan. The Tram Supplier shall set out in the rectification plan:

TIE00899939_0157

55.5.1 the actions required to be taken by the Tram Supplier in order to achieve the sustainable rectification (measured against an agreed revised programme and production criteria over a set period) of the Tram Supplier's poor performance; and

55.5.2 any specific alternative terms or modifications to the terms of this Agreement,

such that the Tram Supplier shall not be in breach of this Agreement if it performs to this level.

55.6 The Tram Supplier shall propose the rectification plan at its cost and shall participate in good faith in discussions or negotiations held by the Client regarding the implementation of the rectification plan.

56. PERSISTENT BREACH

56.1 If a breach by the Tram Supplier of any of its obligations under this Agreement has occurred more than twice then the Client may serve a notice ("**Persistent Breach Notice**") on the Tram Supplier:

56.1.1 specifying that it is a Persistent Breach Notice;

56.1.2 giving reasonable details of the breach; and

56.1.3 stating that such breach is a breach which, if it recurs frequently or continues, may result in a termination of this Agreement.

56.2 If following service of such a Persistent Breach Notice, the breach specified has continued or occurred once again after the date falling 30 days after the date of service of such Persistent Breach Notice and before the date falling 365 days after the date of service of the Persistent Breach Notice, then the Client may serve another notice ("**Final Persistent Breach Notice**") on the Tram Supplier:

56.2.1 specifying that it is a Final Persistent Breach Notice;

56.2.2 stating that the breach specified has been the subject of a prior Persistent Breach Notice within the period of 365 days prior to the date of service of the Final Persistent Breach Notice; and

56.2.3 stating that if such failure is not remedied within 7 days or is remedied and occurs once or more within the 180 day period after the date of service of the Final Persistent Breach Notice, this Agreement may be terminated with immediate effect (but only if

TIE00899939_0158

the said Final Persistent Breach Notice given under this Clause 56.2 has been countersigned by **tie**).

56.3 If the Client terminates this Agreement pursuant to this Clause 56 (*Persistent Breach*) the provisions of Clause 62 (*Payment on Termination*) and Clause 63 (*Effect of Termination or Expiry*) shall apply.

57. CLIENT DEFAULT TERMINATION

57.1 The Tram Supplier may by notice in writing to the Client terminate this Agreement if:

57.1.1 the Client fails to pay an undisputed sum or sums due to the Tram Supplier under this Agreement which, either singly or in aggregate, exceeds 5% of the Aggregate Tram Price and such failure continues for sixty (60) days from receipt by the Client of a notice of non-payment from the Tram Supplier; or

57.1.2 the Client is in material breach of this Agreement which substantially frustrates or renders it impossible for the Tram Supplier to perform its obligations under this Agreement and if such breach is capable of remedy is not remedied by the Client within 60 days of written notice from the Tram Supplier to the Client specifying the relevant material breach,

each a ("**Client Default**"), and this Agreement shall terminate on the day falling sixty days after the day on which the Client receives the termination notice from the Tram Supplier unless the Client rectifies the Client Default within the said sixty day period.

57.2 The Tram Supplier shall not exercise, or purport to exercise, any right to terminate this Agreement (or accept any repudiation of this Agreement) except as expressly set out in this Agreement.

57.3 If the Tram Supplier terminates this Agreement pursuant to this Clause 57 (*Client Default Termination*), the provisions of Clause 62 (*Payment on Termination*) and Clause 63 (*Effect of Termination or Expiry*) shall apply.

57.4 If a termination notice is issued by the Tram Supplier in accordance with Clause 57.1, the Client and the Tram Supplier acknowledge that **tie** may elect to exercise its rights to step into this Agreement under the terms of the Tram Supply Collateral Warranty.

TIE00899939_0159

58. NO FAULT TERMINATION

58.1 The Client may at any time in its sole and absolute discretion give 30 days' written notice to the Tram Supplier to terminate this Agreement in whole or in part at any time for whatever reason (but, save where Clause 58.1.1 applies only if the said notice given under this Clause 58.1 has been countersigned by **tie**):

58.1.1 in the event that the Infraco Contract has been terminated, then the Client shall offer to novate the Tram Supply Agreement to **tie;** and

58.1.2 if **tie** have refused such novation in writing then the Client shall be entitled to terminate this Agreement.

58.2 If the Client terminates this Agreement pursuant to this Clause 58 (*No Fault Termination*) then the provisions of Clause 62 (*Payment on Termination*) and Clause 63 (*Effect of Termination or Expiry*) shall apply.

58.3 Within 60 Business Days prior to the date of expiry of the Infraco Contact or in the event that notice has been served to terminate the Infraco Contract, the Client shall offer to novate, assign or otherwise transfer this Agreement to any party identified in Clauses 58.5.1 and 58.5.2.

58.4 If **tie** have refused such novation, assignation or other transfer in writing the Client shall be entitled to terminate this Agreement in accordance with this Clause 58 (*No Fault Termination).*

58.5 If required by the Client, the Client shall offer to novate, assign or otherwise transfer the whole or any part of this Agreement as directed by **tie**, to:

58.5.1 **tie**, the Operator, the Scottish Ministers, TEL, CEC, Transport Scotland or their successors with no worse financial standing than that of **tie**; or

58.5.2 to any other person whose obligations under this Agreement are unconditionally and irrevocably guaranteed by a person falling within Clause 58.7.1.

58.6 In the case of such a novation or assignation, the Tram Supplier shall enter into a collateral warranty in favour of the Client in substantially the form set out in Schedule 10 (*Reliability Bond and Collateral Warranty).*

TIE00899939_0160

59. TERMINATION ON FORCE MAJEURE

59.1 Neither Party shall be entitled to bring a claim for a breach of obligations under this Agreement by the other Party or incur any liability to the other Party for any losses or damages incurred by that other party to the extent that a Force Majeure Event occurs and such party is directly prevented from carrying out such obligations by that Force Majeure Event, provided that such prohibition on bringing a claim and exclusion of liability shall not operate if and to the extent that:

59.1.1 the Affected Party could, by the exercise of reasonable foresight and diligence, have prevented or reduced the effect of the Force Majeure Event; and

59.1.2 the Affected Party could, whether before or after the occurrence of the Force Majeure Event, have reduced or eliminated the resulting breach of its obligations under this Agreement by taking reasonable steps.

59.2 On the occurrence of a Force Majeure Event, the Affected Party shall notify the other Party as soon as reasonably practicable, specifying details of the Force Majeure Event and providing evidence of its effect on the obligations of the Affected Party and any action proposed to remove or mitigate its effect.

59.3 The Parties shall enter into bona fide discussions with a view to alleviating and removing the effects of such Force Majeure Event as soon as reasonably practicable, and if the terms or measures to remove the effect of the Force Majeure Event cannot be agreed on or before the date falling 12 months after the date of the commencement of the Force Majeure Event or by the end of such longer period as the Parties may have agreed, or such Force Majeure Event is continuing or its consequence remains such that the Affected Party is unable to comply with all or a material part of its obligations under this Agreement for a period of more than 12 months after the date of the commencement of the Force Majeure Event or by the end of such longer period as the Parties may have agreed, either Party shall have the option to terminate this Agreement by written notice to the other.

59.4 The Parties shall at all times following the occurrence of a Force Majeure Event use all reasonable endeavours to prevent and mitigate the effects of any delay to the performance of the Tram Works and the Tram Supplier shall at all times during which a Force Majeure Event is subsisting take all steps in accordance with Good Industry Practice to overcome or minimise the consequences of the Force Majeure Event.

TIE00899939_0161

59.5 The Affected Party shall notify the other party as soon as reasonably practicable after the Force Majeure Event ceases or no longer causes the Affected Party to be unable to comply with its obligations under this Agreement. Following such notification, this Agreement shall continue to be performed on the terms existing immediately prior to the occurrence of the Force Majeure Event.

59.6 If this Agreement is terminated pursuant to this Clause 59 (*Termination on Force Majeure*) then the provisions of Clause 62 (*Payment on Termination*) and Clause 63 (*Effect of Termination or Expiry*) shall apply.

60. TERMINATION FOR CORRUPT GIFTS AND FRAUD

60.1 The Tram Supplier or anyone employed by it or acting on its behalf (including any Tram Supplier Party) shall not commit any Prohibited Act.

60.2 If the Tram Supplier, or anyone employed by it or acting on its behalf (including any Tram Supplier Party) commits any Prohibited Act, then the Client shall be entitled to act in accordance with Clauses 60.3 to 60.7.

60.3 If a Prohibited Act is committed by the Tram Supplier or by an employee of the Tram Supplier not acting independently of the Tram Supplier, then the Client may terminate this Agreement by giving notice to the Tram Supplier.

60.4 If a Prohibited Act is committed by an employee of the Tram Supplier acting independently of the Tram Supplier, then the Client may give notice to the Tram Supplier of termination and this Agreement will terminate, unless within 30 days of receipt of such notice the Tram Supplier terminates that employee's employment and (if necessary) procures the performance of the relevant obligations by another person.

60.5 If a Prohibited Act is committed by anyone acting on behalf of the Tram Supplier (excluding employees of the Tram Supplier, but including any Tram Supplier Party and their employees) and not acting independently of the Tram Supplier, then the Client may give notice to the Tram Supplier of termination and this Agreement shall terminate.

60.6 If a Prohibited Act is committed by anyone acting on behalf of the Tram Supplier (excluding employees of the Tram Supplier but including any Tram Supplier Party, and their employees) and acting independently of the Tram Supplier, then the Client may give notice to the Tram Supplier of termination and this Agreement will terminate unless within 30 days of receipt of such notice given under this Clause 60.6, the Tram Supplier terminates that party's employment and procures the performance of the relevant obligations by another person.

TIE00899939_0162

60.7 Any notice of termination under this Clause 60 (*Termination for Corrupt Gifts and Fraud*) shall specify:

60.7.1 the nature of the Prohibited Act;

60.7.2 the identity of the person whom the Client believes has committed the Prohibited Act; and

60.7.3 the date on which this Agreement will terminate, in accordance with the applicable provision of this Clause 60 (*Termination for Corrupt Gifts and Fraud*).

60.8 If this Agreement is terminated pursuant to this Clause 60 (*Termination for Corrupt Gifts and Fraud*) the provisions of Clause 62 (*Payment on Termination*) and Clause 63 (*Effect of Termination or Expiry*) shall apply.

61. RISK MANAGEMENT

61.1 The Tram Supplier shall comply with the requirements of Schedule 15 (*Risk Management*).

62. PAYMENT ON TERMINATION

62.1 Where the Client terminates this Agreement pursuant to Clauses 55 (*Tram Supplier Default Termination*), 56 (*Persistent Breach*) or 60 (*Termination for Corrupt Gifts and Fraud*) the Tram Supplier shall, subject to Clause 41 (*Liability, Indemnities, Retention and Liquidated Damages*), be liable to the Client and shall indemnify the Client for all Losses suffered by the Client and claims brought against the Client as a result of such termination and the circumstances or events giving rise to the same.

62.2 No compensation shall be payable by the Client to the Tram Supplier for termination of this Agreement whether under contract, delict (including negligence), breach of (or compliance with) statutory duty, restitution or otherwise but without prejudice to payments due under Clause 62.3.4.

62.3 Within 35 Business Days of termination of this Agreement and following receipt of a valid VAT invoice, the Client shall pay to the Tram Supplier:

62.3.1 any undisputed sums due from the Client to the Tram Supplier pursuant to Clause 38 (*Price and Payment*);

62.3.2 any entitlement to demobilisation costs pursuant to Clause 62.3.4; and

TIE00899939_0163

62.3.3 where this Agreement is terminated pursuant to Clause 54 (*Suspension of Work*), Clause 57 (*Client Default Termination*) or Clause 58 (*No Fault Termination*) any amount in respect of any of the Tram Supplier's work in progress under this Agreement, provided that the calculation of such sums have been certified as follows:

62.3.3.1 the Tram Supplier shall have provided the Client with a valuation of all work in progress, including any demonstrable committed costs, in relation to the Tram Works, such valuation shall discount any payments already made in respect of such work; In addition to the forgoing the Tram Supplier shall be entitled to recover loss of profit fixed at 19% with reference to demobilisation costs; and

62.3.3.2 the Client shall, subject to any clarifications as are in the Client's opinion (acting properly and reasonably) necessary certify by notice in writing to the Tram Supplier that part of the work in progress which is approved by the Client and give reasons why any part of the work in progress has not been certified and the value of the sums involved no later than 10 Business Days after the date on which such valuation was received.

62.3.4 The Client shall make payment to the Tram Supplier of any demobilisation costs which have been demonstrably and reasonably incurred by the Tram Supplier in respect of:

62.3.4.1 termination for Client Default pursuant to Clause 57 (*Client Default Termination*); or

62.3.4.2 termination for No Fault Termination pursuant to Clause 58 (*No Fault Termination*);or

62.3.4.3 termination pursuant to Clause 54 (*Suspension of Work*).

62.4 The Tram Supplier shall use all reasonable endeavours to minimise and mitigate any demobilisation costs payable pursuant to Clause 62.3.4 and the Client shall not be liable to pay the Tram Supplier for such demobilisation costs to the extent that:

62.4.1 the Tram Supplier has failed to minimise or mitigate such demobilisation costs;

62.4.2 such demobilisation costs have arisen out of the Tram Supplier's breach of this Agreement or any negligent or wilful act or omission by the Tram Supplier; or

TIE00899939_0164

62.4.3 such demobilisation costs relate to any costs incurred by the Tram Supplier prior to the Works Commencement Date, other than those incurred solely in respect of the Pre Works Development Services, unless such costs were incurred with the prior written agreement of the Client;

62.5 If the Tram Supplier is obliged by this Agreement to pay to the Client any payment in respect of termination of this Agreement under this Clause 62 (*Payment on Termination*), the Tram Supplier shall pay the amount due thereunder to the Client within 35 Business Days of the Termination Date.

62.6 When the Client and the Tram Supplier agree or it is determined that the Client shall pay to the Tram Supplier any payment in respect of termination of this Agreement, under this Clause 62 (*Payment on Termination*), it shall pay such amount within 35 days of the Termination Date.

63. EFFECT OF TERMINATION OR EXPIRY

63.1 On termination or expiry of this Agreement, the Client shall be entitled in its sole and absolute discretion to:

63.1.1 take possession of all work-in-progress (including all Trams allocated to this Agreement and parts therefor) and use of all jigs and tools used solely in respect of the Trams and for that purpose to enter on to any premises of the Tram Supplier (and of any Sub-contractor or agent of the Tram Supplier) to take possession of such work-in-progress, jigs and tools with a view to **tie** and/or the Client being able to re-contract with a third party for the completion of the Trams;

63.1.2 be assigned all agreements relating to the Tram Works entered into between the Tram Supplier and its Sub-contractors;

63.1.3 be assigned any assignable warranties which have been given to the Tram Supplier by any Sub-contractor to the Tram Supplier by any manufacturer of any part of the Trams and to give notice to any such other party of any such assignation (in respect of which the Tram Supplier undertakes to assist in enforcing any rights thus arising);

63.1.4 continue to use all relevant Intellectual Property Rights in accordance with Clause 51 (*Copyright and Intellectual Property*) provided that the Client may in those circumstances purchase a Spare Part or Special Tool from a party other than the Tram Supplier without any requirement to seek to purchase the same from the Tram Supplier (whether further to Clause 34 (*Spares and Special Tools*) or otherwise) and

TIE00899939_0165

without any restriction (whether the restriction is set out in Clause 34 (*Spares and Special Tools*) or otherwise); and

63.1.5 reject one or more of the Trams, whether or not:

63.1.5.1 such Tram or Trams have been or are in the process of being delivered to the Depot;

63.1.5.2 a Certificate of Tram Delivery has been issued in respect of such Tram or Trams; or

63.1.5.3 a Certificate of Tram Commissioning has been issued in respect of such Tram or Trams,

and notwithstanding any other provision of this Agreement (including, for the avoidance of doubt, Clause 41.6) recover from the Tram Supplier the Tram Price in respect of such rejected Trams;

63.2 On termination or expiry of this Agreement, the Client shall be relieved from any obligation to accept delivery of any further Trams at the date of such notice; and

63.3 On termination or expiry of this Agreement, the Tram Supplier shall make available to the Client and/or **tie** all Tram Documentation relating to the Trams.

63.4 On termination or expiry of this Agreement in whole, the obligations of the Parties shall cease except for:

63.4.1 any obligations arising as a result of any antecedent breach of this Agreement;

63.4.2 Clauses 1 (*Definitions and Interpretations*), 33 (*Tram Documentation*), 34 (*Spares and Special Tools*), 35.1 and 36 (*Warranty Regime*), 38 (*Price And Payment*), 39 (*VAT*), 41 (*Liability, Indemnities, Retention and Liquidated Damages*), 43 (*Mitigation*), 51 (*Copyright and Intellectual Property*), 52 (*Confidential Information*), 63 (*Effect of Termination or Expiry*), 64 (*Dispute Resolution*) and 80 (*Third Party Rights*) and under any other provision of this Agreement which is expressed to survive termination or which is required to give effect to such termination or the consequences of termination;

63.4.3 the Warranties and Liquidated Damages in relation to any Trams which have been delivered; and

TIE00899939_0166

63.4.4 any other obligations which give effect to such termination or to the consequences of such termination or which otherwise apply (expressly or by implication) on or after such termination or expiry.

63.5 Upon termination of this Agreement in part, only those obligations directly relating to such part of this Agreement that has been terminated shall cease.

64. DISPUTE RESOLUTION

64.1 The Parties agree that any Dispute shall be dealt with in accordance with the provisions set out in Schedule 13 (*Dispute Resolution Procedure*).

65. DEROGATIONS

65.1 The Tram Supplier shall not, without the prior written consent of the Client's Representative, apply for any exemption or derogation from or dispensation under any applicable Law which would otherwise apply to the Tram Works and including, without limitation, any exemption order under Section 47(3) of the Disability Discrimination Act 1995 or dispensations under the provisions of Section 10 of the Railways and Other Passenger Transport Systems (Approval of Works, Plant and Equipment) Regulations 1994 or any provisions which may replace, modify or supersede such provisions.

66. VARIATIONS TO BE IN WRITING

66.1 No variation or alteration of any of the provisions of this Agreement shall be effective unless it is in writing and signed by both Parties.

67. WAIVER AND CUMULATIVE REMEDIES

67.1 Save where expressly stated, no failure or delay by either Party to exercise any right or remedy in connection with this Agreement will operate as a waiver of it or of any other right or remedy nor will any single or partial exercise preclude any further exercise of the same, or of some other right or remedy. A waiver of any breach of this Agreement shall not be deemed to be a waiver of any subsequent breach.

67.2 The Parties agree that no waiver shall occur or be deemed to have occurred unless or until a clear and unequivocal express waiver of a clearly identified default is contained in a written notice by the waiving Party to the other Party expressly for the purpose of effecting such waiver.

MR

TIE00899939_0167

67.3 The Parties' rights and remedies under this Agreement are, except where provided otherwise in this Agreement, independent, cumulative and do not operate to exclude one another or any rights or remedies provided by Law.

67.4 Neither Party shall be entitled to recover compensation or make a claim under this Agreement in respect of any loss that it has incurred to the extent that it has already been compensated in respect of that loss pursuant to this Agreement or otherwise.

68. NOTICES

68.1 Any notice or notification required or authorised to be given under this Agreement by one Party to the other shall be:

68.1.1 in writing;

68.1.2 sent by one of the following methods:

68.1.2.1 pre-paid special or recorded delivery post or facsimile transmission addressed to the Party to which it is given at:

(a) in the case of notices given to the Client: **tie** limited, Citypoint, 65 Haymarket Terrace, Edinburgh, EH12 5HD, fax number 0131 622 8301, attention: Tram Project Director, or such other address or fax number in the United Kingdom as the Client may notify the Tram Supplier from time to time for that purpose; or

(b) Construcciones Y Auxiliar de Ferrocarriles S.A. (CAF) address, J.M. Iturrioz 26, 20200 Beasain (Guipuzcoa) – Spain fax number, 00 34 943 189211 attention the Edinburgh Tram Project Manager or such other address or fax number in the United Kingdom as the Tram Maintainer may notify the Client from time to time for that purpose; or

68.1.2.2 facsimile transmission addressed to the Client's Representative or the Tram Supplier's Representative (as appropriate) at a facsimile number notified to the giving Party by the receiving Party for the service of notices under this Agreement from time to time; or

68.1.2.3 personal delivery into the hands of:

(a) in the case of notices given to the Client, the Client's Representative;

TIE00899939_0168

or

(b) in the case of notices given to the Tram Supplier, the Tram Supplier's Representative.

68.1.3 be deemed duly served:

68.1.3.1 if sent by pre-paid special or recorded delivery post, on proof of delivery; or

68.1.3.2 if sent via facsimile transmission or personal delivery, on the day of issue of the relevant fax confirmation receipt or such personal delivery (as appropriate), unless that day is not a Business Day or such delivery or transmission is made after 5.00 pm on a Business Day in which case it shall be deemed duly served on the next Business Day thereafter.

69. ASSIGNATION, CHANGES IN LEGAL STATUS, CHANGES IN CONTROL AND SUB-CONTRACTING

69.1 The Tram Supplier shall not assign, novate or otherwise transfer the whole or any part of this Agreement without the prior written agreement of the Client.

69.2 In addition to and without prejudice to the provisions of Clause 5 (*Novation*) and the Tram Supply Novation Agreement to be entered into in accordance with Clause 5 (*Novation*), the Client shall be entitled to assign, novate or otherwise transfer the whole or any part of this Agreement:

69.2.1 to the Scottish Ministers, TEL, CEC, Transport Scotland or any local authority; or

69.2.2 to any body with no worse financial standing than that of **tie** who takes over all or substantially all of the functions of **tie**; or

69.2.3 to any other person whose obligations under this Agreement are unconditionally and irrevocably guaranteed (in a form reasonably acceptable to the Tram Supplier acting reasonably) by **tie** or a person falling within Clause 69.2.1; or

69.2.4 to the Operator; or

69.2.5 with the prior written consent of the Tram Supplier (such consent not to be unreasonably withheld or delayed) to any person not covered by Clauses 69.2.1, 69.2.2, 69.2.3 or 69.2.4 whose on-going financial standing is no worse than **tie**.

69.3 If the legal status of the Tram Supplier shall change in any material way, the Client shall be informed by the Tram Supplier in writing, immediately.

69.4 If there is a Change in Control in the Tram Supplier, the Client shall be informed immediately by the Tram Supplier in writing.

69.5 The Tram Supplier shall not sub-contract the whole of the Tram Works and shall not without the prior written consent of the Client (such consent not to be unreasonably withheld or delayed) sub-contract any part of the Tram Works.

69.6 The Tram Supplier shall procure that any Sub-contractor employed by the Tram Supplier shall, provide and employ in connection with the execution of the Tram Works only such technical assistants as are skilled, experienced and assessed as competent for undertaking a specified range of activities in their respective occupations and, as appropriate, such sub-agents, foremen and leading hands as are competent to give proper supervision to the work they are required to supervise and such skilled, semi-skilled and un-skilled labour as is necessary for the proper and timely execution of the Tram Works.

69.7 The Client's Representative shall have the right after due warning in writing to require the Tram Supplier to remove from the Edinburgh Tram Network any Sub-contractor or employee of such Sub-contractor who misconducts itself or is incompetent or negligent in the performance of its duties of fails to conform with any particular provisions with regard to safety which may be set out in this Agreement or persists in any conduct which is prejudicial to health and safety and such Sub-contractor and/or employee of such Sub-contractor shall not be again employed upon the Tram Works without permission of the Client's Representative.

69.8 The Tram Supplier shall in respect of any part of the Tram Works in respect of which the Tram Requirements Specification expressly states that a Sub-Contractor Direct Agreement will be required from a supplier in respect of which the Client shall as a condition of giving its consent to the sub-contracting of an element of the Tram Works, require the relevant Sub-contractor to enter into a Sub-Contractor Direct Agreement with the Client and **tie** within 2 months of the Effective Date, and in respect of any other Sub-contractor if so requested by the Client at any time, the Tram Supplier shall use all reasonable endeavours to ensure that such Sub-contractor enters into a Sub-Contractor Direct Agreement with the Client and **tie**.

69.9 The Client may withhold its consent relating to issues including but not limited to:

69.9.1 any sub-contract or assignation where the proposed Sub-contractor or assignee:

69.9.1.1 is not in the Client's opinion appropriately qualified and experienced in and/or

TIE00899939_0170

accredited for the purposes of carrying out work of the scope, type and complexity to that required in carrying out that part of the Tram Works to be sub-contracted to it; or

69.9.1.2 has not entered into a Sub-contractor Direct Agreement with the Client and **tie** pursuant to Clause 69.8; or

69.9.1.3 is not approved by the Independent Competent Person;

69.9.2 any sub-contract or assignation where the proposed assignee or Sub-contractor is not in the Client's absolute opinion of suitable financial standing.

69.10 The appointment or authorisation by the Tram Supplier of any Sub-contractor, agent, officer or employee and/or any consent given by the Client to any Sub-contractor, agent, officer or employee, shall not relieve the Tram Supplier of any obligation under this Agreement, and the acts of and omissions of any such Sub-contractor, agent, officer or employee shall, for the purposes of this Agreement, be deemed to be the acts or omissions of the Tram Supplier.

69.11 The Tram Supplier shall provide sufficient superintendence to ensure that the work to be carried out by Sub-Contractors will comply with the requirements of this Agreement and applicable Laws.

69.12 Any application to the Client for consent pursuant to Clauses 69.5 shall be in writing and shall be sent to the address set out in Clause 68 *(Notices)*.

70. CONFLICT OF INTEREST

70.1 The Tram Supplier shall (and shall procure that the Tram Supplier Parties shall):

70.1.1 be responsible for ensuring that no conflict of interest arises in respect of its duties under this Agreement;

70.1.2 make all possible enquiries to ensure that there is no conflict of interest prior to its assuming the duties required of it under the terms of this Agreement; and

70.1.3 consult and advise the Client if the Tram Supplier considers that a conflict of interest arises or if he considers that a conflict of interest may exist or may arise or may be foreseeable and shall furnish the Client with such information as shall enable the Client to determine whether or not a conflict of interest has arisen.

TIE00899939_0171

71. SECURITY INTERESTS

71.1 The Tram Supplier shall not create or agree to create any Security Interest over any Assets or over this Agreement.

71.2 The Tram Supplier shall not dispose of any right in respect of or interest in any Asset used in the Tram Works or relating to the Edinburgh Tram Network if to do so would have a material adverse effect upon either the Edinburgh Tram Network, the rights in the Assets held by CEC, the position of **tie**, or the position of the Client under this Agreement, whether or not this Agreement has terminated or expired provided always that restrictions in this Clause 71 (*Security Interests*) shall not apply in the case of:

71.2.1 disposals of redundant or obsolete assets not required for the Edinburgh Tram Network provided that the Client has procured **tie's** and CEC's consent to such disposal, and CEC receives any proceeds associated with such disposal; or

71.2.2 disposals of property or assets where such property or assets are replaced by other property or assets comparable or superior as to type and function.

72. DATA PROTECTION

72.1 For the purpose of this Clause 72 (*Data Protection*), the term "personal data" shall have the meaning given to it in the Data Protection Act 1998.

72.2 In so far as is applicable to its obligations pursuant to this Agreement, the Tram Supplier shall, in relation to any personal data relating to the performance of the Tram Works in respect of which it is either the "data controller" or the "data processor" for the purposes of the Data Protection Act 1998, comply with the obligations of a "data controller" under the provisions of the seventh data protection principle as set out in schedule 1 of that Act. In addition, the Tram Supplier:

72.2.1 shall have at all material times (and shall use its reasonable endeavours to procure that all the Tram Supplier Parties have or will have at all material times) the appropriate technical and organisational measures in place against unauthorised or unlawful processing of personal data and against accidental loss or destruction of, or damage to, personal data held or processed by it;

72.2.2 shall (and shall use its reasonable endeavours to procure that the Tram Supplier Parties shall) take at all material times, all reasonable steps to ensure the integrity of any of its staff with access to personal data processed in connection with the Tram Works;

TIE00899939_0172

72.2.3 shall act only on the instructions of the Client or **tie** in relation to the processing of any personal data in respect of which the Client or **tie** is the "data controller" for the purposes of that Act;

72.2.4 shall only obtain, hold, process, use, store and disclose such personal data as is necessary to perform its obligations under this Agreement; and

72.2.5 shall allow the Client, or **tie** access to any relevant premises on reasonable notice to inspect its procedures referred to in Clause 72.2.1, This access shall be duly justified by the Client.

73. ENTIRE AGREEMENT

73.1 Except where expressly provided otherwise in this Agreement, this Agreement constitutes the entire agreement between the Parties in connection with its subject matter and supersedes all prior representations, communications, negotiations and understandings concerning the subject matter of this Agreement.

73.2 Each of the Parties confirms to the other that it has neither been induced to enter into this Agreement in reliance on, nor has it made, any representation or warranty except those contained or referred to in this Agreement.

73.3 Any representations or warranties other than those contained or referred to in this Agreement are superseded and extinguished by this Agreement.

73.4 Each Party irrevocably and unconditionally waives all rights and remedies which it might otherwise have had in relation to any representations or warranties other than those contained or referred to in this Agreement save in respect of any fraudulent misrepresentation.

74. CONSENT AND APPROVAL

74.1 The giving of any consent or approval by or on behalf of **tie** or the Client shall not in any way relieve the Tram Supplier of any of its obligations under this Agreement or of its duty to ensure the correctness, accuracy or suitability of the matter or thing which is the subject of the consent or approval.

74.2 Failure by **tie** or the Client to disapprove or object to any matter or thing shall not prejudice its power subsequently to take action under this Agreement in connection therewith.

TIE00899939_0173

75. DISCRIMINATION

75.1 The Tram Supplier shall not (and the Tram Supplier shall insert a clause to this effect in each contract with any Tram Supplier Party) unlawfully discriminate within the meaning and scope of the provisions of the Equal Pay Act 1970, the Sex Discrimination Act 1975, the Employment Rights Act 1996, the Working Time Regulations 1998, the Part-Time Workers (Prevention of Less Favourable Treatment) Regulations 2000, the Fixed Term Employees (Prevention of Less Favourable Treatment) Regulations 2002, the Race Relations Act 1976, the Disability Discrimination Act 1995, the Employment Equality (Sexual Orientation) Regulations 2003 and the Employment Equality (Religion or Belief) Regulations 2003 and the Employment Equality (Age) Regulations 2006.

76. FURTHER ASSURANCE

76.1 Each Party shall at the reasonable request and cost of the other (save where it is expressly provided that the cost of such act or execution shall be for that Party's account) do any act or execute any document that may be necessary to give full effect to this Agreement.

77. APPLICABLE LAW

77.1 This Agreement, any document completed or to be completed in accordance with its provisions and any matter arising from this Agreement or any such document shall be governed by and construed in accordance with Scots law.

77.2 Subject to Clause 64 (*Dispute Resolution*), the Parties hereby irrevocably submit to the exclusive jurisdiction of the Court of Session in relation to this Agreement, any such document and any such matter.

78. NO PARTNERSHIP OR AGENCY

78.1 Nothing in this Agreement shall be construed as creating a partnership between the Client and the Tram Supplier.

78.2 The Tram Supplier shall not (and shall procure that the Tram Supplier Parties shall not) act or purport to act as agent for **tie** and/or the Client in relation to any matter unless specifically authorised in writing under this Agreement by the Client. The Tram Supplier shall not be entitled to bind **tie** and/or the Client in any way or to create any liability or cause of action against **tie** and/or the Client and shall not hold itself out (and shall procure that no Tram Supplier Party shall hold itself out) as having any such authority or power

TIE00899939_0174

79. INVALID TERMS

79.1 If any term of this Agreement shall be held to any extent to be invalid, unlawful or unenforceable:

79.1.1 that term shall to that extent be deemed not to form part of this Agreement; and

79.1.2 the validity and enforceability of the remainder of this Agreement shall not be affected.

79.2 Without prejudice to any other terms of this Agreement, the Parties shall promptly consult in good faith with a view to agreeing as soon as reasonably practicable one or more provisions in lieu of the invalid provision such as will, so far as is possible under any applicable Law, have the same commercial effect as the invalid provision would have had if it had not been invalid, unlawful or unenforceable.

80. THIRD PARTY RIGHTS

80.1 Subject to Clause 35 (*Risk and Title*) and Clause 51.2.2 creating rights in favour of CEC and **tie** and any other express provision of this Agreement, a person who is not party to this Agreement shall have no right to enforce any term of this Agreement and there shall not be created any ius quaesitum tertio in favour of any party whatsoever.

SCHEDULE 1

CONDITIONS PRECEDENT

PART 1: COMMENCEMENT CONDITIONS PRECEDENT

Delivery to the Client, in form and substance satisfactory to the Client (acting reasonably) of the documents listed below. Where listed as a duly certified copy, the document is to be certified by the company secretary of the Tram Supplier as being a true copy, in full force and effect:

1.1 a copy, duly certified, of its certificate of incorporation (or equivalent) and of any certificate of incorporation on change of name (or equivalent) or certificate of re-registration as a public company (or equivalent) related to it;

1.2 a copy, duly certified, of its memorandum and articles of association (or equivalent constitutional documents);

1.3 a copy, duly certified, of minutes of a meeting of its board of directors, or any other owners, representatives, committee or board entitled to bind the Tram Supplier to the terms of the Tram Supply Agreement:

1.3.1 evidencing all necessary approvals on behalf of the Tram Supplier to the execution, delivery and performance by the Tram Supplier of the Tram Supply Agreement and all documents to be executed by the Tram Supplier pursuant to the Tram Supply Agreement;

1.3.2 authorising a specified person to execute the Tram Supply Agreement, all documents to be executed by the Tram Supplier pursuant to the Tram Supply Agreement and to approve any amendments to the draft of the Tram Supply Agreement and to all documents to be executed by the Tram Supply pursuant to the Tram Supply Agreement;

1.3.3 authorising the Tram Supplier's Representative to sign and despatch all notices and other communications required or permitted to be given by the Tram Supplier under the Tram Supply Agreement and all documents to be executed by the Tram Supplier pursuant to the Tram Supply Agreement; and

1.3.4 authorising the Tram Supplier's Representative to sign and despatch all notices and other communications required or permitted to be given by the Tram Supplier under the Tram Supply Agreement and all documents to be executed by the Tram Supplier pursuant to the Tram Supply Agreement;

TIE00899939_0177

1.4 evidence that all insurances to be taken out under the Tram Supply Agreement and be in force from the Effective Date have been effected on the Effective Date and that the relevant policies comply with the requirements of the Tram Supply Agreement and provision of copies of the certificates of insurance and policy documents for the insurances specified in the Tram Supply Agreement;

1.5 duly executed Subcontractor Direct Agreements in respect of the Tram Works from key Sub-Contractors, or undertakings that such Subcontractor Direct Agreements will be provided within 2 months of the Effective Date;

1.6 Legal Opinions in respect of the powers and capacity of the Tram Supplier to enter into this Tram Supply Agreement.

AGREEMENT

AMONG

(1) **tie LIMITED** (company number SC230949) whose registered office is at City Chambers, High Street, Edinburgh, Midlothian, EH1 1YJ ("**tie**");

(2) **BILFINGER BERGER UK LIMITED**, a company incorporated in England and Wales under number 02418086 and having its registered office at 150 Aldersgate Street, London EC1A 4EJ which expression shall include its successors, permitted assignees and transferees; and

(3) **SIEMENS PLC**, a company incorporated in England and Wales under number 00727817 and having its registered office at Faraday House, Sir William Siemens Square, Frimley, Camberley, Surrey GU16 8QD which expression shall include its successors, permitted assignees and transferees,

(Bilfinger Berger UK Limited and Siemens plc together the "**Infraco**" and each separately an "**Infraco Member**"); and

(4) **CONSTRUCCIONES Y AUXILIAR DE FERROCARRILES S.A. (CAF),** a company registered in Spain in the Corporate Register of Guipuzcoa: volume 983, sheet 144, page number SS-329, entry 239 and having its registered office at J.M. Iturrioz 26, 20200 Beasain (Guipuzcoa), Spain ("**Tramco**");

BACKGROUND

A By an agreement in writing dated ◆ . 2008 ("**Tram Supply Agreement**") **tie** appointed Tramco to design, manufacture and supply Trams and to supply documentation and associated equipment in connection with the Edinburgh Tram Network. A copy of the Tram Supply Agreement is attached to this Agreement and initialled by the parties for the purpose of identification. This Agreement is supplemental to the Tram Supply Agreement.

B **tie** and Infraco have entered into a contract ("**Infraco Contract**") under which Infraco has been appointed to carry out and/or manage the design, construction, installation, commissioning, tram procurement, system integration, infrastructure maintenance, tram maintenance and supply of related equipment and materials, trams and related infrastructure in respect of the Edinburgh Tram Network.

TIE00899939_0180

C **tie** and Infraco have agreed, with the consent of Tramco, that Infraco shall take over the rights and liabilities of the "Client" (as defined in the Tram Supply Agreement) under the Tram Supply Agreement and that Tramco shall owe all of the duties and obligations arising thereunder to Infraco by novating the Tram Supply Agreement from **tie** to Infraco upon and subject to the terms of this Agreement.

D **tie** wishes to be released from the Tram Supply Agreement and Tramco has agreed to release **tie**.

1. DEFINITIONS AND INTERPRETATION

1.1 The definitions given in the recitals to this Agreement apply to this Agreement.

1.2 In this Agreement the following additional words and expressions shall have the meanings set out opposite to them:

"**Effective Date**" means the last date of execution of this Agreement."

1.3 Clause headings in this Agreement are for the convenience of the parties only and do not affect its interpretation.

1.4 Unless otherwise defined hereunder, where the Tram Supply Agreement defines a meaning to any capitalised word or expression used in this Agreement, the same meaning shall be given to it in this Agreement.

2. RELEASE BY TRAMCO OF tie

2.1 Tramco releases and discharges **tie** from any and all duties, obligations and liabilities owed to Tramco under the Tram Supply Agreement and accepts the liability of Infraco under the Tram Supply Agreement in lieu of **tie**.

3. RELEASE BY tie OF TRAMCO

3.1 **tie** releases and discharges Tramco from the further performance of Tramco's duties and obligations under the Tram Supply Agreement.

4. ACCEPTANCE OF LIABILITY BY TRAMCO TO THE INFRACO

4.1 Tramco undertakes to Infraco to continue to perform all the duties and to discharge all the obligations of Tramco under the Tram Supply Agreement and to be bound by its terms and conditions in every way as if Infraco was and always had been a party to the Tram Supply Agreement in place of **tie**.

TIE00899939_0181

4.2 Tramco warrants to Infraco that, in respect of the duties and obligations which it has already performed under the Tram Supply Agreement, it has performed those duties and obligations in accordance with the standards of skill and care set out in the Tram Supply Agreement and otherwise in compliance with all of the terms and conditions thereof. Tramco warrants to Infraco that it shall be liable for any loss or damage suffered or incurred by Infraco arising out of any negligent act, default or breach by Tramco in the performance of its obligations under the Tram Supply Agreement prior to the Effective Date. Tramco shall be liable for such loss or damage notwithstanding that such loss or damage would not have been suffered or incurred by **tie** (or suffered or incurred to the same extent by **tie**).

4.3 Without prejudice to Clauses 4.2 or 4.4, Tramco shall not contend under this Agreement that its liability to Infraco is affected or diminished by reason of **tie** having suffered no loss and/or any loss claimed to have been suffered by Infraco being different in character from that suffered by **tie**.

4.4 Tramco confirms it was aware at the time of entering into the Tram Supply Agreement that Infraco could suffer losses, damages, costs, expenses, claims, demands and proceedings as a result of Tramco's breach of the Tram Supply Agreement.

4.5 Without prejudice to the generality of this Agreement, Tramco warrants and undertakes to Infraco that its duties and obligations under, the Tram Supply Agreement, whether required to be performed prior to the date hereof, have been and will be performed in accordance with the Tram Supply Agreement.

4.6 Tramco acknowledges that any breach of the warranties in this Agreement may cause Infraco to be in breach of the Infraco Contract and/or cause Infraco to suffer loss and/or damage.

4.7 The liability of Tramco to Infraco pursuant to the Tram Supply Agreement as novated by this Agreement (both in respect of the period prior to the Effective Date and after the Effective Date) shall not be affected by Infraco's assumption of liability to **tie** in respect of the Edinburgh Tram Network pursuant to the Infraco Contract.

4.8 Tramco acknowledges that Infraco has and shall continue to rely upon all Tram Works provided by Tramco under the Tram Supply Agreement as novated by this Agreement.

4.9 For the avoidance of doubt, in accordance with Clause 41.2 of the Tram Supply Agreement save where expressly provided for in the Tram Supply Agreement, nothing in this Agreement shall expose either Party to the application of Indirect Loss.

5. VESTING OF REMEDIES AGAINST TRAMCO

All rights of action and remedies against Tramco under and pursuant to the Tram Supply Agreement vested in **tie** (including their accrued rights of action and remedies) shall automatically and without the need for any further action on the part of Infraco, vest in Infraco with effect from the Effective Date.

6. ACCEPTANCE OF LIABILITY BY INFRACO

With effect from the Effective Date Infraco undertakes to perform all the duties and to discharge all the obligations of **tie** under the Tram Supply Agreement as novated by this Agreement and to be bound by its terms and conditions in every way as if Infraco was and always had been a party to the Tram Supply Agreement in place of **tie** and as if all acts and omissions of **tie** under or pursuant to the Tram Supply Agreement prior to the Effective Date were the acts and omissions of Infraco.

7. VESTING OF REMEDIES AGAINST tie

As from the Effective Date, all rights of action and remedies under or pursuant to the Tram Supply Agreement vested in Tramco shall lie against Infraco and not **tie** whether or not such rights of action or remedies may have arisen prior to, on or after the Effective Date.

8. ACKNOWLEDGEMENT OF PAYMENT

Tramco acknowledges that all payments properly due to Tramco under the Tram Supply Agreement up to the Effective Date have been paid by **tie** (subject to confirmation of pending payments and the assurance that the Tramco will not suffer payment delays due to the novation process).

9. AMENDMENT OF TRAM SUPPLY AGREEMENT

tie, Tramco and Infraco agree that the terms of the Tram Supply Agreement shall be and are varied in the manner set out in Appendix 1 to this Agreement.

10. AFFIRMATION OF TRAM SUPPLY AGREEMENT

The terms and conditions of this Agreement represent the entire agreement between the parties relating to the novation of the Tram Supply Agreement and, except as specifically amended by Appendix 1 of this Agreement, all the terms and conditions of the Tram Supply Agreement remain in full force and effect. **tie** hereby confirms that it has not exercised any rights and discretions in regard to the Tram Supply Agreement prior to the point of novation.

TIE00899939_0183

11. EQUIVALENT PROJECT RELIEF

tie acknowledges that in relation to any Dispute under the Infraco Contract where the Client's sole involvement in any Client Claim is in performing administrative functions in relation to the Client Claim, and not as an interested or affected party, then Infraco shall be entitled to recover its costs incurred in relation to such dispute pursuant to Clause 7A (*Tramco Equivalent Project Relief*) of the Tram Supply Agreement from **tie**. **tie** agrees to pay to the Infraco such reasonable costs unless the dispute proceeds to adjudication where such costs shall be paid as allocated between **tie** and the Tram Supplier by the adjudicator following the Dispute Resolution Procedure.

The Infraco agrees that it shall minimise as far as reasonably practicable its administrative costs in relation to Equivalent Project Relief.

The Tram Supplier agrees not to vexatiously claim under the Tram Supply Agreement or vexatiously use the Disputes Resolution Procedure.

12. RIGHTS OF THIRD PARTIES

A person who is not party to this Agreement shall have no right to enforce any term of this Agreement. This clause does not affect any right or remedy of any person which exists or is otherwise available.

13. LAW AND JURISDICTION

This Agreement shall be governed by and construed in accordance with Scots law and the Scottish Courts shall have jurisdiction with regard to all matters arising under it.

TIE00899939_0184

APPENDIX 1 TO THE TRAM SUPPLY NOVATION AGREEMENT

SCHEDULE OF AMENDMENTS TO THE TRAM SUPPLY AGREEMENT

Clause 7.15

Insert at end of Clause 7.15 the following:

The Tram Supplier acknowledges that it has a copy of the Infraco Contract and is deemed to be aware of the obligations, risks and liabilities assumed by the Infraco thereunder. Without prejudice to the foregoing, the Tram Supplier shall be deemed to be fully aware of the adverse financial and other consequences for the Client which could arise under the Infraco Contract in consequence, in whole or in part, of a breach on the part of the Tram Supplier of its obligations under this Agreement.

Clause 38.11.2

Delete Clause 38.11.2 and replace with:

38.11.2 all payments under this Agreement to the Client shall be made in pounds sterling by electronic transfer of funds to:

Name and Address of Bank:

Sort Code:

Account Number:

Account Name:

Clause 58.2 - No Fault Termination

Insert the following new Clause 58.2:

58.2 In the event that the Infraco Contract is terminated, this Agreement shall terminate unless the Tram Supplier is notified that **tie** (or another nominated party) requires to step into this Agreement.

Clause 60 - Termination for Corrupt Gifts and Fraud

Delete Clause 60 (Termination for Corrupt Gifts and Fraud), in its entirety substitute therefore:

60.1 The Tram Supplier or anyone employed by it or acting on its behalf (including any Tram Supplier Party) shall not commit any Prohibited Act.

TIE00899939_0187

60.2 If the Tram Supplier or anyone employed by it or acting on its behalf (including any Tram Supplier Party) commits any Prohibited Act, then the Client may terminate this Agreement with immediate effect by giving notice to the Tram Supplier.

Clause 68.1.2.1.1

Delete Clause 68.1.2.1.1 and replace with:

68.1.2.1.1 in the case of notices given to the Client: Bilfinger Berger-Siemens Consortium, Lochside House, Lochside Way, Edinburgh Park EH12 9DT, fax number 0131 452 2518, attention: Project Director, or such other address or fax number in the United Kingdom as the Client may notify the Tram Supplier from time to time for that purpose; or

COLLATERAL WARRANTY IN RESPECT OF A TRAM SUPPLY AGREEMENT IN FAVOUR OF tie FROM TRAMCO

relating to

THE EDINBURGH TRAM NETWORK

TIE00899939_0189

AGREEMENT

BETWEEN

(1) **tie LIMITED** (company number SC230949) whose registered office is at City Chambers, High Street, Edinburgh, Midlothian, EH1 1YJ ("**tie**");

(2) **BILFINGER BERGER UK LIMITED**, a company incorporated in England and Wales under number 02418086 and having its registered office at 150 Aldersgate Street, London EC1A 4EJ which expression shall include its successors, permitted assignees and transferees; and

(3) **SIEMENS PLC**, a company incorporated in England and Wales under number 00727817 and having its registered office at Faraday House, Sir William Siemens Square, Frimley, Camberley, Surrey GU16 8QD which expression shall include its successors, permitted assignees and transferees,

(Bilfinger Berger UK Limited and Siemens plc together referred to as the "**Infraco**", which term shall include its successors and permitted assignees); and

(4) **CONSTRUCCIONES Y AUXILIAR DE FERROCARRILES S.A. (CAF),** a company registered in Spain in the Corporate Register of Guipuzcoa: volume 983, sheet 144, page number SS-329, entry 239 and having its registered office at J.M. Iturrioz 26, 20200 Beasain (Guipuzcoa), Spain ("**Tramco**");

BACKGROUND

A By an agreement in writing dated ◆ 2008 (the "**Tram Supply Agreement**"), **tie** appointed Tramco to design, manufacture and supply Trams and supply documentation and associated equipment in connection with the Edinburgh Tram Network.

B **tie** and Infraco have entered into a contract under which Infraco has been appointed to carry out and/or manage the design, construction, installation, commissioning tram procurement, system integration, infrastructure maintenance, tram maintenance and supply of related equipment and materials, trams and related infrastructure in respect of the Edinburgh Tram Network.

C **tie** and Infraco have agreed, with the consent of Tramco, that Infraco shall take over the rights and liabilities of the "**Client**" (as defined in the Tram Supply Agreement) under the Tram

TIE00899939_0190

Supply Agreement by novating the Tram Supply Agreement from **tie** to Infraco upon and subject to the terms of the Novation Agreement (as hereinafter defined).

D It is a term of the Tram Supply Agreement that Tramco shall enter into this Agreement with **tie** following the execution of the Novation Agreement.

IT IS AGREED as follows:

1. DEFINITIONS AND INTERPRETATION

1.1 In this Agreement the following words and expressions shall have the following meanings, unless the context requires otherwise:

"**Agreement**" means this document (as amended from time to time pursuant to Clause 13);

"**Deliverables**" means all written or documentary outputs to be prepared and delivered by Tramco in the performance of the Tram Works and Tramco's other obligations under the Tram Supply Agreement;

"**Infraco Contract**" means the contract to be entered into or entered into by **tie** with Infraco as described in Recital B above;

"**Novation Agreement**" means the novation agreement entered into among **tie**, Tramco and Infraco relating to the novation of the Tram Supply Agreement;

"**Party**" means each and any of the parties to this Agreement and **Parties** shall be construed accordingly; and

"**Tram Supply Agreement**" means the agreement dated [◆] and originally entered into by **tie** and Tramco, which has been novated to Infraco and Tramco pursuant to the Novation Agreement.

1.2 Unless the context requires otherwise:

1.2.1 words importing:

1.2.1.1 the singular include the plural and vice versa; and

1.2.1.2 one gender includes all other genders.

1.2.2 a reference to:

TIE00899939_0191

1.2.2.1 persons includes firms, companies, corporations, partnerships, trusts, authorities and other incorporated and/or unincorporated bodies; and

1.2.2.2 a recital, clause or schedule is a reference to a recital, clause or schedule of or to this Agreement.

1.3 The list of contents and clause headings in this Agreement are included for convenience only and do not affect its interpretation.

1.4 Where a party comprises two or more persons:

1.4.1 any obligations on the part of that party contained or implied in this agreement are deemed to be joint and several obligations on the part of those persons; and

1.4.2 references to that party shall include references to each and any of those persons.

1.5 Unless otherwise defined hereunder, where the Tram Supply Agreement defines a meaning to any capitalised word or expression used in this Agreement, the same meaning shall be given to it in this Agreement.

1.6 In the case of any unintended conflict between the definition or interpretation of words or expressions in this Agreement and in the Tram Supply Agreement, the Tram Supply Agreement shall prevail save where by express words or where it is apparent from the context that the contrary is intended in this Agreement.

2. STANDARD OF CARE

Tramco warrants and undertakes to **tie** that:

2.1 it has carried out and shall carry out and discharge the Tram Works and all its other duties and obligation under the Tram Supply Agreement subject to and in accordance with the terms thereof; and

2.2 in addition to and without derogation from clause 2.1;

2.2.1 Tramco warrants to **tie** that, in the performance of the Tram Works and all its other duties and obligations under the Tram Supply Agreement it shall exercise a reasonable level of professional skill, care and diligence to be expected of a properly qualified and competent Tram designer and manufacturer experienced in carrying out works similar to the Tram Works to be carried out under the Tram Supply Agreement;

TIE00899939_0192

2.2.2 it owes a duty of care to **tie** in carrying out its duties and obligations under the Tram Supply Agreement;

2.2.3 all obligations and duties on the part of Tramco set out in the Tram Supply Agreement which are expressed to be made in favour of or given to **tie** shall be directly enforceable by **tie** pursuant to this Agreement following the novation of the Tram Supply Agreement pursuant to the Novation Agreement.

3. COPYRIGHT LICENCE

3.1 Tramco hereby grants to **tie** a royalty-free and exclusive licence to use such Project IPR and Tram Supplier IPR as may be necessary, for operation and maintenance of the trams but, not in any case, for manufacturing purposes, for **tie** to use in relation to any projects associated with the Tram Works and or the operation and/or maintenance of the Edinburgh Tram Network, including the Trams. This licence shall carry the right to grant sub-licences, and be transferable to third parties, prior written approval of the Tram Supplier. Tramco shall be liable for the Project IPR and the Tram Supplier IPR only to the extent that it is used for the purposes for which it was intended.

3.2 In so far as ownership of the copyright and any other Intellectual Property Rights in any Deliverable prepared or provided by Tramco in connection with the provision of the Tram Works under the Tram Supply Agreement is vested in any person other than Tramco including, without limitation, any Tram Supplier Party, Tramco shall procure for **tie** the benefit of such a licence as is referred to in clause 3.1 for the purposes referred to therein.

3.3 Tramco shall, if so requested at any time, execute such documents and perform such acts (including the grant to **tie** of a licence to use any Software related with operation and maintenance) as may be required fully and effectively to assure to **tie** or any third party the rights referred to in this clause 3.

3.4 Tramco shall provide to **tie** a copy of any of the Deliverables which are to be provided to Infraco under the Tram Supply Agreement as soon as reasonably practicable after receipt by Tramco of a written request from **tie** to do so, unless already delivered to **tie**.

3.5 Tramco undertakes to **tie** that the use by **tie** of any of the Deliverables for any purpose provided for in this clause 3 shall not infringe the rights of any third party in relation to the Deliverables.

TIE00899939_0193

4. REQUIRED INSURANCES AND OCIP INSURANCES

4.1 Tramco undertakes to **tie** that:

4.1.1 it has maintained and shall maintain during the performance of its obligations under the Tram Supply Agreement each of the Required Insurances in accordance with the requirements of Clause 40 (*Required Insurances*) and Schedule 11 (*Required Insurances*) of the Tram Supply Agreement;

4.1.2 cover under the professional indemnity insurance is extended to include Tramco's liabilities under this Agreement;

4.1.3 this Agreement has been disclosed to Tramco's current professional indemnity insurers or brokers (as the case may be) and shall be disclosed to any future professional indemnity insurers or brokers providing the insurance required by this Agreement;

4.1.4 Tramco shall abide by the terms and conditions of insurance and not do or omit to do anything that might prejudice the cover or its rights to make a claim; and

4.1.5 it has been disclosed to it details of the OCIP Insurances and that it shall abide by the terms and conditions of the insurances contained therein and shall not do or omit to do anything that might prejudice the cover of **tie**'s right to make a claim under the OCIP Insurances.

4.2 As and when required by **tie**, Tramco shall produce for inspection documentary evidence that the Required Insurances are being properly maintained.

4.3 Tramco shall not make any material alteration to the terms of the Required Insurances without **tie**'s prior approval which approval shall not be unreasonably withheld. If the insurer makes or attempts to make any material alteration or purports to withdraw cover, or if Tramco is unable to obtain professional indemnity insurance, Tramco shall promptly give written notice of this to **tie**.

5. tie STEP-IN

5.1 Tramco shall not exercise nor seek to exercise any right of determination of the Tram Supply Agreement or to rescind the Tram Supply Agreement by reason of a Client Default or to otherwise discontinue the performance of any of Tramco's obligations in relation to the Tram Supply Agreement by reason of breach on the part of Infraco (or otherwise) without giving **tie** not less than 21 days' written notice of its intention to do so and specifying in such notice the

TIE00899939_0194

grounds for the proposed determination. Tramco for the period of any such notice diligently and properly continue to perform Tramco's obligations under the Tram Supply Agreement.

5.2 Any period stipulated in the Tram Supply Agreement for the exercise by Tramco of a right of determination shall nevertheless be extended as may be necessary to take account of the period of notice required under clause 5.1.

5.3 Compliance by Tramco with the provisions of clause 5.1 shall not be treated as a waiver of any breach on the part of Infraco giving rise to the right of determination nor otherwise prevent Tramco from exercising its rights after the expiration of the notice unless the right of determination shall have ceased under the provisions of clause 5.4

5.4 The right of Tramco to determine the Tram Supply Agreement or to rescind the Tram Supply Agreement or to discontinue the performance of any of its obligations in relation to the Tram Supply Agreement shall cease if within the period of 21 days referred to in clause 5.1, **tie** gives written notice to Tramco:

5.4.1 requiring Tramco to continue with the performance of all its obligations under the Tram Supply Agreement;

5.4.2 acknowledging that **tie** is assuming all the obligations of Infraco (as "Client") under the Tram Supply Agreement; and

5.4.3 undertaking to Tramco to discharge all amounts payable to Tramco under the terms of the Tram Supply Agreement from the date on which such notice under this clause 5.4 is given to Tramco.

5.5 Upon compliance by **tie** with the requirements of clause 5.4, the Tram Supply Agreement shall continue in full force and effect as if the right of determination on the part of Tramco had not arisen and in all respects as if the Tram Supply Agreement had been made between **tie** and Tramco to the exclusion of Infraco.

5.6 Notwithstanding that as between Infraco and Tramco, Tramco's right of determination of its engagement under the Tram Supply Agreement may not have arisen, the provisions of clause 5.5 shall nevertheless apply if **tie** gives written notice to Tramco and Infraco to that effect and **tie** complies with the requirements on its part under clause 5.4.

5.7 Tramco does not need to be concerned or required to enquire whether, and shall be entitled to assume that, as between Infraco and **tie**, the circumstances have occurred permitting **tie** to give notice under clause 5.6.

TIE00899939_0195

5.8 Tramco acting in accordance with the provisions of this clause 5 shall not incur any liability to Infraco arising out of the exercise by **tie** of its rights under this clause 5.

5.9 Save as otherwise set out in this Agreement, unless and until **tie** has given notice under this clause 5:

5.9.1 **tie** has no liability whatsoever to Tramco in respect of amounts payable to Tramco under the Tram Supply Agreement; and

5.9.2 **tie** has no authority to issue any direction or instruction to Tramco in relation to the performance of Tramco's obligations under the Tram Supply Agreement.

5.10 Without prejudice to the provisions of clauses 5.1 to 5.9 inclusive, if prior to the service of any notice under clause 5.4 Tramco is determined under the Tram Supply Agreement for any reason whatsoever, Tramco shall, if required in writing so to do by **tie**, no later than 12 weeks after the date of such determination forthwith enter into a new agreement with **tie** on the same terms as the Tram Supply Agreement, but with such revisions as **tie** and Tramco may reasonable require to reflect altered circumstances and the fact that it is **tie** and not Infraco employing Tramco.

6. ASSIGNATION

6.1 Tramco shall not assign, novate or otherwise transfer the whole or any part of this Agreement without the prior written agreement of **tie**.

6.2 **tie** shall be entitled to assign, novate or otherwise transfer the whole or any part of this Agreement:

6.2.1 to the Scottish Ministers or any local authority or other body with no worse financial standing than that of **tie**; or

6.2.2 to any other person whose obligations under this Agreement are unconditionally and irrevocably guaranteed (in a form reasonably acceptable to Tramco) by **tie** or a person falling within clause 6.2.1; or

6.2.3 to City of Edinburgh Council or Transport Edinburgh Limited; or

6.2.4 to any other person with the prior written consent of Tramco (such consent not to be unreasonably withheld or delayed).

TIE00899939_0196

6.3 Tramco undertakes to **tie** not to contend in any court proceedings under this Agreement that any person to whom **tie** assigns or has assigned its rights under this Agreement or any of them in accordance with the foregoing provisions of this clause is to be precluded from recovering any loss resulting from any breach of this Agreement (whenever happening) by reason that such person is an assignee and not the original contracting party under this Agreement or by reason that **tie** is named under this Agreement or any intermediate assignee of **tie** escaped loss resulting from such breach by reason of the disposal of its interest in the same.

7. LIABILITY OF TRAMCO

7.1 No provision of this Agreement is intended to exclude any obligation or liability which would otherwise be implied whether by law of contract, delict or otherwise.

7.2 The responsibility of Tramco under this Agreement is not to be reduced or in any way reduced or limited by any enquiry or inspection by or on behalf of any person notwithstanding that such enquiry or inspection may give rise to a claim by **tie** against a third party.

7.3 The rights and remedies conferred upon **tie** by this Agreement are in addition to any other rights and remedies that **tie** may have against Tramco including (without prejudice to the generality of the foregoing) any remedies in delict.

7.4 Subject to the other provisions of this Agreement, the liability of Tramco to **tie** is to be determined in all respects in accordance with the terms of the Tram Supply Agreement and this Agreement and, in the event of any claim by **tie** under or through this Agreement, Tramco shall be entitled to rely upon any defence, right, limitation or exclusion under the Tram Supply Agreement as though **tie** were named as Client under it, except that:

7.4.1 **tie** shall not be affected by any subsequent variation of the Tram Supply Agreement which would adversely affect the obligations owed by Tramco or the waiver, compromise or withdrawal of any claim made Infraco; and

7.4.2 Tramco shall not be entitled to exercise any right of set-off, retention or withholding against **tie** to which Tramco may be entitled as against Infraco.

7.5 The liability of Tramco under this Agreement shall be no greater in extent than the liability of Tramco under the Tram Supply Agreement.

7.6 In no event shall the Tram Supplier be responsible for indirect or consequential damages.

TIE00899939_0197

8. DELIVERY, TITLE TO PARTS AND OTHER PROPERTY

Notwithstanding any provision of the Tram Supply Agreement to the contrary, in respect of Tramco's performance of its obligations under the Tram Supply Agreement:

8.1 Tramco shall sell to **tie** or such other party as shall be notified by **tie** to Tramco in writing, each Tram free from all claims, charges, rights in security, liens, encumbrances, hypothecs and other third party rights of any nature.

8.2 Tramco shall transfer title:

8.2.1 to each Tram, to **tie** or such other party as shall be notified by **tie** to Tramco in writing, on the date of issue of the Certificate of Tram Delivery being issued in respect of that Tram;

8.2.2 to each item of the Tram Related Equipment to **tie** or such other party as notified by **tie** to Tramco in writing, on the later of delivery of each item of the Tram Related Equipment to Infraco and the Certificate of Tram Commissioning being issued in respect of the first Tram.

8.3 The risk of loss, theft, damage or destruction of:

8.3.1 each Tram shall pass from Tramco to **tie** or such other party as notified by **tie** to Tramco in writing on the date of issue of the Certificate of Tram Delivery being issued in respect of that Tram;

8.3.2 each item of the Tram Related Equipment shall pass from Tramco to **tie** or such other party as notified by **tie** to Tramco in writing, on the later of delivery of each item of the Tram Related Equipment and the Certificate of Tram Commissioning being issued in respect of the first Tram.

8.4 Tramco shall be responsible for each Tram completely manufactured or in the course of manufacture and for all Tram Related Equipment until such time as risk in the Trams and the Tram Related Equipment passes to **tie** (or as **tie** otherwise shall direct) in accordance with this clause 8.

8.5 Tramco undertakes to **tie** that it shall promptly replace any Tram or any part, component or material incorporated in or to be used in connection with such Tram or any Tram Related Equipment, which is lost, damaged or destroyed by whatever cause, prior to such passing of risk.

TIE00899939_0198

9. CONSENT OF INFRACO

Infraco consents to the terms of this Agreement.

10. NOTICES

10.1 Any notice required to be given under this Agreement is to be hand delivered or sent by prepaid registered or recorded delivery post to the party concerned at its address set out in this Agreement or to such other addresses as may be notified by such party for the purposes of this clause.

10.2 Any notice given pursuant to this clause, if sent by registered or recorded delivery post, is deemed to have been received 48 hours after being posted.

11. RIGHTS OF THIRD PARTIES

A person who is not a party to this Agreement shall have no right to enforce any term of this Agreement.

12. INVALID TERMS

12.1 If any term of this Agreement shall be held to any extent to be invalid, unlawful or unenforceable:

12.1.1 that term shall to that extent be deemed not to form part of this Agreement; and

12.1.2 the validity and enforceability of the remainder of this Agreement shall not be affected.

13. VARIATIONS AND WAIVERS TO BE IN WRITING

13.1 No variation, alteration or waiver of any of the provisions of this Agreement shall be effective unless it is in writing and signed by or on behalf of the Party against which the enforcement of such variation, alteration or waiver is sought.

14. WAIVER

14.1 Save where expressly stated, no failure or delay by any Party to exercise any right or remedy in connection with this Agreement shall operate as a waiver of it or of any other right or remedy nor shall any single or partial exercise preclude any further exercise of the same, or of some other right or remedy. A waiver of any breach of this Agreement shall not be deemed to be a waiver of any subsequent breach.

TIE00899939_0199

14.2 The Parties' rights and remedies under this Agreement are, except where provided otherwise in this Agreement, independent, cumulative and do no operate to exclude one another or any rights or remedies provided by law.

15. JURISDICTION AND LAW

15.1 This Agreement is governed by and is to be construed according to Scots law and the Scottish courts shall have jurisdiction in relation to all matters arising under it.

15.2 The Parties agree that any dispute in relation to this Agreement shall be conducted in accordance with Clause 64 (*Dispute Resolution Procedure*) of the Tram Supply Agreement and the provisions of the said Clause 64 and Schedules 13 (*Dispute Resolution Procedure*) and 14 (*Panels to the Dispute Resolution Procedure*) are deemed to be incorporated mutatis mutandis in respect of this Agreement provided that any reference to "Parties" shall be deemed to refer to **tie** and Tramco, any reference to "Client" shall be deemed to refer to **tie**, and notices to be given in connection therewith shall be given in accordance with clause 10 of this Agreement.

NOVATION AGREEMENT ESCROW LETTER

DLA Piper Scotland LLP
Collins House
Rutland Square
EDINBURGH
EH1 2AA

[**Date**] 2008

Dear Sirs,

EDINBURGH TRAM NETWORK - TRAM SUPPLY AND TRAM MAINTENANCE AGREEMENTS

We refer to:

1. a Tram Supply Agreement dated ◆ between (1) **tie** Limited and (2) Construcciones Y Auxiliar De Ferrocarriles S.A. (CAF) for the design, manufacture and supply of Trams and the supply of documentation and associated equipment ("**Tram Supply Agreement**"); and

2. a Tram Maintenance Agreement dated ◆ between (1) **tie** Limited and (2) Construcciones Y Auxiliar De Ferrocarriles S.A. (CAF) for the provision of services for the ongoing maintenance of Trams and for the supply of consumables and spares for Trams ("**Tram Maintenance Agreement**").

We also refer to the documents detailed in Schedule 1 to this letter (items numbered 1 and 2 being referred to as the "**Novation Agreements**" and items 3 and 4 being referred to at the "**Collateral Warranties**") which have been signed by **tie** Limited and Construcciones Y Auxiliar De Ferrocarriles S.A. (CAF) (but which are as at today's date unsigned by Infraco) (as referred to below) (which shall be referred to as the "**Agreement Documents**").

Originals of the Agreement Documents are enclosed with this letter, and are to be held by you as escrow agent upon the following terms and conditions:

3. Whilst the Agreement Documents are held by you in escrow, they shall have no effect as between the parties thereto.

4. Upon **tie** Limited confirming to you in writing in the form set out in Schedule 2 that an agreement to be made between (1) **tie** Limited and (2) a contractor to be appointed by **tie** Limited ("**Infraco**") to carry out and/or manage the design, construction, installation, commissioning, tram procurement, system integration, infrastructure maintenance, tram maintenance and supply of related equipment and materials, trams and related infrastructure in respect of the Edinburgh Tram Network ("**Infraco Contract**") has been executed by **tie** and Infraco in accordance with the Requirements of Writing (Scotland) Act 1995 and that the

MUE

TIE00899939_0203

Infraco Contract has become unconditional in all respects save only for the execution by Infraco of the Agreement Documents ("**Infraco Completion**"), you are thereupon authorised and directed forthwith:

to deliver the Agreement Documents to Infraco for execution by Infraco in accordance with the Requirements of Writing (Scotland) Act 1995. Delivery of documents hereunder is to be by hand, by courier or by recorded first-class post.

If you do not receive notice from **tie** Limited as aforesaid that Infraco Completion has occurred before the first anniversary of the date of this escrow letter, or such later date as may be agreed in writing by the parties to this escrow letter, you shall be under no further obligation to the signatories of this letter and none of the Agreement Documents shall have any legal effect.

All of the parties to this escrow letter agree that you shall be fully entitled to act in accordance with the terms set out in this escrow letter upon receipt by you of the notice from **tie** Limited referred to in paragraph 2 above, and that in so doing you shall have no liability to us (or any of us) in any respect whatsoever connected to the performance of your duties under this escrow letter. Furthermore, upon the performance of such duties in accordance with the terms of this escrow letter, you shall be irrevocably released from the obligations arising under this escrow letter.

Please sign the acknowledgement below confirming your agreement to the above terms.

Yours faithfully

They are subscribed for and on behalf of

SCHEDULE 2 OF THE NOVATION AGREEMENT ESCROW LETTER

RELEASE LETTER

To: DLA Piper Scotland LLP
Collins House
Rutland Square
Edinburgh EH1 2AA

[Date] 200◆

We, **tie** Limited, refer to the escrow letter dated ◆ from us and Construcciones y Auxliliar de Ferrocarriles (CAF) to you and countersigned by you. Words and phrases defined in the escrow letter shall have the same meanings when used herein.

We hereby confirm to you, by reference to paragraph 2 of the escrow letter that Infraco Completion has taken place, and you are therefore hereby authorised and directed forthwith to deliver the Agreement Documents to Infraco for execution in accordance with the Requirements of Writing (Scotland) Act 1995 (by hand or courier or recorded first-class post) in accordance with paragraph 2 (a) of the escrow letter.

Director/Authorised Signatory,

For and on behalf of **tie** Limited

CONSTRUCCIONES Y AUXILIAR DE FERROCARRILES S.A. (CAF)

TIE00899939_0206

This is Schedule 2 referred to in the foregoing Tram Supply Agreement between tie Limited and Construcciones Y Auxiliar de Ferrocarriles S.A. (CAF)

SCHEDULE 2

EMPLOYER'S REQUIREMENTS

SCHEDULE PART 2

EMPLOYER'S REQUIREMENTS

Erratum to Version 4

Erratum	Date	Comments
001	24/04/08	Page 48: Section 2.15: The footnote "Damian has already instructed this change." – is to be ignored.
002	24/04/08	Page 90: Section 7: The footnote "The word maximum would allow no channels to be provided and still be compliant! Two channels ok as a minimum." – is to be ignored.
003	24/04/08	Page 147: Section 10.1.5: The reference in the last sentence to Schedule 32 is incorrect. It should read "The Noise and Vibration Policy is included in Schedule Part 29 (***tie*** *and CEC Policies*)".
004	24/04/08	Page 174: Section 12.9 - The reference to Schedule 45 should refer to Schedule Part 40.
005	24/04/08	Page 209: Section 17.1: Last paragraph The reference to Section 32 should read Schedule Part 29. After Project Safety and Quality Interface Document add (40-91-PLA-002).
006	24/04/08	Page 273: Section 23.16.6 - Schedule 7 - Performance Regime is incorrect. This should now refer to Schedule Part 6.
007	24/04/08	Page 609: Section 40.1.2 – Final paragraph Performance payment regime – The reference to Schedule 7. This should now refer to Schedule Part 6.
008	24/04/08	Page 634: Section 40.2.4 Last line Reference to Clause 52 of Infraco should read as Clause 52.20.1.
009	24/04/08	Page 635: Section 40.2.4 Table 93 Fault Category 3 “Edqual Service elements in Schedule 7” should read “Equal Service elements in Schedule Part 6”.
010	24/04/08	Page 645: Section 40.2.8 Last set of bullet points at bottom of page Reference to Schedule 7 Performance Measurement System should read as Schedule Part 6.
011	05/05/08	Page 40 Section 2.8 Table 2 reformatted to show entire contents (see attached)
012	05/05/08	Page 41 Section 2.8 Table 3 reformatted to show entire contents (see attached)
013	05/05/08	Page 42 Section 2.8 Table 4 reformatted to show entire contents (see attached)
014	05/05/08	Page 431 Section 29.14 Table 83 see updated version (see attached)
015	05/05/08	Page 610 Section 4.2.2 Table 89 see updated version (see attached)
016	05/05/08	Page 50 Section 2.16(b) 4th bullet - delete “Leith” and replace with “Ocean Terminal or Newhaven according to service”
017	05/05/08	Page 147 Section 10.1.7 - delete “Section 68 of the Edinburgh Tram Line Act 2006” and replace with “Section 63C of the Edinburgh Tram Line Act 2006”
018	05/05/08	Page 169 Section 12.8 Update reference to ISO 10005-1995 to ISO 10005-2005
019	05/05/08	Page 260 Section 23.13.3 - delete “Network” from section heading
020	05/05/08	Page 264 Section 23.14.3 - delete “Network” from section heading
021	05/05/08	Page 266 Section 23.15.3 - delete “Network” from section heading
022	05/05/08	Page 318 Section 24.5 Change reference to Schedule 22 of the Tram Supply Agreement to Schedule 23 of the Tram Supply Agreement
023	05/05/08	Page 318 Section 24.6 3rd paragraph should read “The Trams shall have a key suiting system that provides a logical hierarchy of access to cleaners, inspectors, drivers and maintenance staff. It shall not be part of the general suite but tram specific as detailed in Section 22.2.1 of these Employer’s Requirements.”

TIE00899939_0208

Erratum	Date	Comments
024	05/05/08	Page 622 Section 40.2.2 Table 92 Structures SO3 and SO4 - delete "(if CEC own it)" from the comments column
025	05/05/08	Page 625 Section 40.2.2 Table 92 Structures S20 to S31 - insert "the Operator is responsible for cleaning and graffiti removal" to the comments column
026	05/05/08	Page 627 Section 40.2.2 Table 92 Retaining Walls W03 to W19 - insert "the Operator is responsible for cleaning and graffiti removal" to the comments column
027	05/05/08	Page 632 Section 40.2.4 Final paragraph headed "**Further Maintenance Activities" -** delete bullet "removal of graffiti" and bullet "cleaning"
028	05/05/08	Page 644 Section 40.2.8 Under heading "Reporting Period Review", 4th bullet relating to maintenance report, sub-bullets 1 and 2 - delete "including cleaning"
029	05/05/08	Page 646 Section 40.2.10 3rd paragraph - delete "operational phase" and replace with "Term"
030	05/05/08	Page 652 Section 40.2.19 - delete section and insert "Not used"
031	05/05/08	Page 652 Section 40.2.20 - delete bullets 1 to 4, and 6
032	05/05/08	Page 662 Section 40.3.9 1st paragraph - delete "will be established in detail during the tender process" and replace with "in the Tram Maintenance Agreement"
033	05/05/08	Page 665 Section 40.4.1 9th paragraph 3rd sentence - replace with "The Edinburgh Tram Network design shall be selected such that all equipment/systems used in the design shall continue to be available for the design life specified and that the Infraco shall give tie a minimum of 12 months notice where any supplier intends to cease supply of any component. The Infraco shall recommend a strategy for managing such obsolescence and effect replacement of such components where these fail."
034	05/05/08	Page 672 Section 40.5.2 6th bullet - amend to read "evidence of product whole life cycle experience to date in other service use"
035	05/05/08	Appendix 1 – ET Brand Guidelines as referred to in Section 5 (see attached)

Table 83 (Page 431 Section 29.14)

TIE00899939_0217

Table 83 - Depot Plant and Equipment to be Provided (updated 020508)

	No	Description	Function	Features	Fixed/Mobile/ Portable	Location used	Supplier	User	Maintainer	Access Control	Cleaned	Quantity
1		Cleaning Equipment										
	1.1	Tram Cleaning Equipment	Equipment for cleaning of tram interiors	110V Industrial vacuum cleaning equipment, ≥ 2kW power Equipment to allow removal Floor polishing equipment	P	Generally used in stabling areas However can be used throughout the Depot	T	O	O	O	O	6
	1.2	Tram pressure washer	Industrial washer for general tram cleaning within the Depot including bogie washing	Self powered Hot water/steam - self heating Pressure variable up to ≥200 bar Flow rate ≥12 l/min Lance and hose ≥10m Detergents compatible with Tram external finishes	M	Throughout Depot	T	T	T	T	T	1

	No	Description	Function	Features	Fixed/Mobile/ Portable	Location used	Supplier	User	Maintainer	Access Control	Cleaned	Quantity
	1.3	Infraco pressure washer	Removal Removal of fly posters General cleaning	Features as per Tram pressure washer Mobile towable bowser with capacity for up to one shift of cleaning Infraco to ensure interchangability with tram pressure washer Readily transportable on back of road-rail and other road vehicles	M	Across the ETN	I	I	I	I	I	1

	No	Description	Function	Features	Fixed/Mobile/ Portable	Location used	Supplier	User	Maintainer	Access Control	Cleaned	Quantity
	1.4	Tram Washing Plant	Fixed plant for cleaning of Tram exterior	Unidirectional >15 tph continuously Minimised water consumption, maximised water recirculation controllable and monitored from Control Centre via SCADA system Self contained Pre-wet One pair application brushes Automatic end wash Two pair water wash brushes Dryer Operates from -5°C ambient external temperature within shelter Final details TBD with tram supplier ≥70% water recycling	F	Alongside main workshop	I	O	O	O	O	1

	No	Description	Function	Features	Fixed/Mobile/ Portable	Location used	Supplier	User	Maintainer	Access Control	Cleaned	Quantity
				Backflow prevention devices shall be installed. Treatment of wastewater to meet appropriate standards prior to connecting to site drainage system shall be provided.								
	1.5	Rail Groove Cleaning Equipment	P-way cleaning	Vacuum equipment to remove detritus/debris from grooved track including drain boxes and points Able to clean drains and gullies employing water jets Transportable on road/rail vehicle, lifted with crane or fork lift truck	M	Across the ETN	I	I	I	I	I	1

	No	Description	Function	Features	Fixed/Mobile/ Portable	Location used	Supplier	User	Maintainer	Access Control	Cleaned	Quantity
				Self powered for full shift Easy collection/disposal of detritus/debris								
	1.6	Parts washer	Infrastructure/Tram component cleaning & degreasing in dirty workshop	Able to wash components ≤100kg, ≤750mm diameter	F	Within dirty workshop	I	I/T	I	I	User	1
	1.7	Floor scrubber	Depot floor cleaning	Industrial vacuum/brush scrubber equipment Compatible with floor finishes	M	Within Depot building	T	T	T	T	T	1
2		Mechanical Handling										
	2.1	Shunter	Manouveuring Trams within workshop	Battery powered Road/rail capability Capable of towing/propelling single Trams Speed up to 3 km/h Local and remote control	M	Throughout Depot tracks Road capability to move between tracks on	T	O/T	~~I/~~T	O	User	1

	No	Description	Function	Features	Fixed/Mobile/ Portable	Location used	Supplier	User	Maintainer	Access Control	Cleaned	Quantity
				Charging facilities Coupler at each end		hardstanding						
	2.2	Tram lifting system and stands	Lifting Trams to allow routine maintenance and removal of bogie(s)	Fixed underfloor system providing flush floor when not in use. Ability to lift fully functional, unladen tram. Synchronised lift from single control panel. Ability to stop and lock lift at any vertical positionInterlocking to protect Tram in event of system/component failure. Manually positioned stands to be provided Interlocking with OLE if required.	F	Main workshop	I	T	T	T	T	1 set

	No	Description	Function	Features	Fixed/Mobile/ Portable	Location used	Supplier	User	Maintainer	Access Control	Cleaned	Quantity
	2.3	Fixed high level access platforms	To allow access to all equipment mounted on Tram roof	Capable of providing access to all roof mounted equipment on tram Decking to prevent tools or small to components falling through Handrails and toeboards to prevent personnel/material falling Access/egress gates interlocked with OLE End protection	F	Main workshop	I	T	I	T	T	2 sets
	2.4	Overhead crane	Bridge type crane spanning 2 roads within the workshop to allow all material within main workshop to be transported up to and including size/weight of motor bogie	≥6.3 tonne capacity Vertical clearance <960 mm from hook (fully raised) to top of crane Traverses below OLE Interlocked with OLE Remote control using hand held device	F	Main workshop	I	T/I	T	T	User	1

	No	Description	Function	Features	Fixed/Mobile/ Portable	Location used	Supplier	User	Maintainer	Access Control	Cleaned	Quantity
				Multi-speed faciltiy - lift, traverse and travel Long and cross travel to cover all areas over the two roads								
	2.5	Mobile crane	Facilitate removal of miscellaneous equipment including bogie components within the dirty workshop	≥2t capacity Powered operation	M	Throughout workshops	T	T/I	T	T	User	1
	2.6	Bogie workstands	To allow dismounted bogies to be maintained	Allows bogie to be manoeuvred along the stub track in the dirty workshop Wheel locks Capable of supporting both trailer and motor bogie	M	Dirty workshop	T	T	T	T	T	1
	2.7	Other tram equipment stands	Various stands to allow items of equipment to be stored and readily maintained when dismounted from the Tram	Infraco to propose depending on tram design Expected to include stands for doors,	M	Throughout Depot	T	T	T	T	T	

	No	Description	Function	Features	Fixed/Mobile/ Portable	Location used	Supplier	User	Maintainer	Access Control	Cleaned	Quantity
				windows, body panels etc…								
	2.8	Accommodation bogies	To allow Trams to be moved within workshop once bogies have been removed or the Tram has been split at any articulation	Allows Tram to be manoeuvred throughout the depot once any combination of bogies has been replaced Allows entire tram to be manoeuvred throughout the depot once any articulation has been split	M	Throughout Depot	T	T	T	T	T	
	2.9	Fork lift truck	Lifting and transporting miscellaneous equipment	Battery powered Charging facilities Road wheels >3 t lifting capacity Drum handling equipment Crane arm Capable of accessing	M	Throughout the Depot but limited to hard standing areas when outside	T & I	T/I	T & ~~/~~I	T & I	User	1 plus 1

	No	Description	Function	Features	Fixed/Mobile/ Portable	Location used	Supplier	User	Maintainer	Access Control	Cleaned	Quantity
				all shelving and racking in stores- Infraco to demonstrate								
	2.10	Pallet truck	Lifting & Transporting equipment particularly in stores	Manually manoeuvred, hydraulic lifting the Infraco to propose requirements. Infraco to provide integrated solution	M	Throughout the Depot but limited to hard standing areas when outside	I	T/I	T/I	T	Us er	The Infraco to propose
	2.11	Hand trolleys	Transporting tools and spares	Unpowered the Infraco to propose requirements. Infraco to provide integrated solution	M	Throughout the Depot but limited to hard standing areas when outside	I	T/I	T/I	T	Us er	The Infraco to propose

	No	Description	Function	Features	Fixed/Mobile/ Portable	Location used	Supplier	User	Maintainer	Access Control	Cleaned	Quantity
	2.12	Infraco lifting slings	General slings for lifting infrastructure heavy components on system and in Depot building	Infraco to propose. Stand for storage	P	Use on system infrastructure	I	I	I	I	I	The Infraco to propose
	2.13	Tram lifting slings	Specific lifting gear to allow all equipment to be removed and replaced.	Raised hook on overhead crane can be no more than 5390 mm ARL the Infraco to propose Stand for storage	M	Use in Depot building only	T	T	T	T	T	Tramco to propose
	2.14	Windscreen/window removal equipment	For use in replacing tram windscreens and side windows	Mobile stand capable to being used to access both windscreen and side windows Electrically powered vacuum beam with suckers adapted to windscreen design Audio/visual alarm in the event of suction loss	M	Use in Depot building only	T	T	T	T	T	1

	No	Description	Function	Features	Fixed/Mobile/ Portable	Location used	Supplier	User	Maintainer	Access Control	Cleaned	Quantity
	2.15	Re-railing equipment	For use in re-railing trams out on the System	Variety of jacks/beams/slides to be proposed by the Infraco Airbags Slew locking devices Capable of being readily transported on the road/rail vehicle	M	Used any where on system including Tramstops	T	T	T	T	T	1 set
	2.15	Stop boards	To indicate the presence of equipment/personnel/trams on the tracks	The Infraco to propose requirements. Infraco to develop integrated solution	P	Throughout System	I	T/I	I	T/I	User	≥20
3		Workshop & Stores Furniture										
	3.1	Shelving and racking	Storage of spares and other material	Heavy duty The Infraco to propose requirements. The Infraco to develop integrated solution	F	Stores	I	T/I	I	T/I	User	The Infraco to propose
	3.2	Tram staging	for Tram inspections/repairs	The Infraco to propose any	M	Used within Depot	T	T	T	T	T	The Infraco to propose

	No	Description	Function	Features	Fixed/Mobile/ Portable	Location used	Supplier	User	Maintainer	Access Control	Cleaned	Quantity
				additional staging required		building						
	3.3	General staging	For infrastructure inspections/repairs	The Infraco to propose any additional staging required	M	Across Edinburgh Tram Network	I	I	I	I	I	The Infraco to propose
	3.4	Shelving	Storage of minor items/documents	The Infraco to propose requirements. The Infraco to develop integrated solution	F	Throughout workshops	I	T/I	I	T/I	Us er	The Infraco to propose
	3.5	Workbenches	Equipment maintenance	The Infraco to propose requirements. The Infraco to develop integrated solution	F	Throughout workshops	I	T/I	I	T/I	Us er	The Infraco to propose
	3.6	Cupboards	Storage of minor items/documents	The Infraco to propose requirements. The Infraco to develop integrated solution	F	Throughout workshops	I	T/I	I	T/I	Us er	The Infraco to propose
	3.7	COSHH cupboard	Storage of COSHH items	The Infraco to propose requirements. The	F	Dirty workshop	I	T/I	I	T/I	use r	The Infraco to propose

	No	Description	Function	Features	Fixed/Mobile/ Portable	Location used	Supplier	User	Maintainer	Access Control	Cleaned	Quantity
				Infraco to develop integrated solution								
	3.8	Workshop stools	Personnel comfort when working	The Infraco to propose requirements. The Infraco to develop integrated solution	F	Throughout workshops	I	T/I	T/I	T/I	Us er	The Infraco to propose
4		Fixed Plant										
	4.1	Air conditioning maintenance equipment	Specialist tools for filling/emptying refrigerant	The Infraco to propose	F	Anywhere in Depot building	T/I	T/I	T/I	T/I	T/I	The Infraco to propose
	4.2	Tyre replacement equipment	Specialist tools for tyre splitting/removal/balancing /bearing replacement	The Infraco to propose	F	Dirty workshop	T	T	T	T	T	1
	4.3	Underfloor wheel lathe	In-situ reprofiling of Tram tyres	Capable of producing a range of wheel profiles. Tolerances to be agreed between the Infraco Swarf conveyed to skip for removal by means of forklift truck capable of turning all wheels on one Tram within	F	Within Depot building.	I	T	T	T	T	1

	No	Description	Function	Features	Fixed/Mobile/ Portable	Location used	Supplier	User	Maintainer	Access Control	Cleaned	Quantity
				eight hour shift								
	4.4	Sand Plant	Refilling of Tram sanding equipment	Minimum silo capacity 30 tonnes Capable of receiving sand delivery directly from road vehicle Allows Tram driver to fill an empty tram within 5 minutes Rate of fill to be sustainable for 30 minutes. In no circumstances shall the interval between the filling of two Trams exceed 10 minutes The physical condition of the sand shall not deteriorate when stored Sand deliveries to a	F	Dedicated facility	T	O	O	O	~~I~~T	1

	No	Description	Function	Features	Fixed/Mobile/ Portable	Location used	Supplier	User	Maintainer	Access Control	Cleaned	Quantity
				Tram shall stop automatically when the tram sand box is full Sand filling nozzles to be compatible with the sand filling inlets on the trams Signal interlocking to inhibit the movement of a tram if the sand filling nozzles are not returned to their correct storage position.								
	4.5	Machine tools	General machine tools required for maintenance	The Infraco to propose requirements. The Infraco to develop integrated solution	F	Dirty workshop	I	T/I	T/I	T/I	User	The Infraco to propose
	4.6	Paint booth	Respraying of removable Tram panels	For use with water based paints integrated compressor	F	Outside workshop	T	T/I	T/I	T	User	1
	4.7	Pantograph	to calibrates and align	The Infraco to	F	Throughout	T	T	T	T	T	1

	No	Description	Function	Features	Fixed/Mobile/ Portable	Location used	Supplier	User	Maintainer	Access Control	Cleaned	Quantity

Welcome to the Edinburgh Trams brand.

The Edinburgh Trams brand plays a crucial part in our communications with our customers and in creating a strong, memorable and recognisable image for the system. The brand has been specifically developed to sit alongside Lothian Buses as part of a co-ordinated presentation of public transport in Edinburgh.
For the strategy to succeed it is vital that all those involved in the delivery and service of the system adhere to the guidelines contained in this manual.
This will ensure that the Edinburgh Trams brand remains coherent and consistent. It is a well known fact that a well managed and consistently implemented brand helps inspire public confidence and trust.
By working within these guidelines you will help contribute to that process.

Phil Wheeler

Convener, Transport, Infrastructure and Environment

Introduction

The elements and architecture of the Edinburgh Trams brand draw heavily from the Lothian Buses identity. This is to reinforce the strategy that has been adopted to create a genuinely integrated public transport system for Edinburgh.

Colours, typography and graphics are consistent between the two modes and are immediately recognisable as 'family members'.

The contents of this manual define how the branding must be implemented if the integrity of the visual relationship between the two modes is to be maintained.

In essence the branding is clean, simple and easy to understand - precisely the values the tram service provides.

TIE00899939_0252

Glossary

The key terms used in this document are as follows:

The Mark

A combination of the harlequins, the logotype and the red block.

The Logotype

The text of Edinburgh Trams set in Swiss 721BT. The logotype is used with the harlequins and the block in fixed relationships to form marks.

The Exclusion Zone

The minimum area around marks or logotypes that must be kept free of other graphic elements. This is to ensure that they are reproduced clearly and legibly without interference from other visual devices.

TIE00899939_0253

Guide to using the Mark

This page describes how the mark and the red block should be used.

Some simple rules are:

1. Never extend the red block unless the extended width of the red block to the left is more than 2 times the width of the mark and the extensions bleed off the page or media as illustrated by the header above. The extension to the right edge of the media should be half the width of the mark.

2. The red block should never be reduced in height when part of the mark alone but can be extended in height when the width is extended subject to rule 1.

3. The height should only be extended if the block is to bleed off the page or media.

TIE00899939_0254

Colour Glossary

To assist those who are involved in reproducing the Edinburgh Trams identity we have described here the primary specifications for print, screen and paint.

Print

PMS
This is short for the Pantone Matching System. This system is used to specify proprietary 'spot' colours. Spot colours are individually mixed for printing.

The letter 'C' after the colour number shows a colour's appearance on coated paper stock. The letter 'U' after the number shows a colour's appearance on uncoated paper stock.

CMYK
These initials represent the colours used in the four colour printing process: Cyan, Magenta, Yellow and Black (Kohl). Different combinations and percentages of these four colours are used to make matches to the 'spot' colours.

Screen

RGB
This is short for Red, Green, Blue the primary colours of light. RGB is used for reproduction on screens and electronic display systems.

Web
To make colours that can be reproduced on internet and intranet sites, Web safe colours should be specified. Web safe colours provide a greater degree of consistency than RGB colours when there is no control over the equipment used to view the site.

Paint

NCS
This is short for Natural Color System. NCS provides a wide range of colour specifications applicable to paints and other materials.

Other systems such as RAL and British Standard BS4800 have a limited number of Edinburgh Trams colour matches. Approval needs to be sought before using these systems.

TIE00899939_0255

Typography

We have two fonts: Humanist 521BT for general use and Swiss 721 BT which is only used to create the Logotype.

Only Roman, Bold and Light versions of Humanist 521 should be used with italic versions as appropriate.

Humanist 521 BT

Roman **Aa**

ABCDEFGHIJKLMNOPQRSTUVWXYZ
abcdefghijklmnopqrstuvwxyz
1234567890

Bold **Aa**

ABCDEFGHIJKLMNOPQRSTUVWXYZ
abcdefghijklmnopqrstuvwxyz
1234567890

Light Aa

ABCDEFGHIJKLMNOPQRSTUVWXYZ
abcdefghijklmnopqrstuvwxyz
1234567890

TIE00899939_0256

Mark usage

The mark shown here is the only acceptable version to be used.

No other colours should be used and the mark should never be stretched or the proportions altered in any way.

TIE00899939_0257

Mark usage

When using a single colour mark the version on the right shows how to reverse out of white while the version on the left demonstrates reversing from black or another colour.

TIE00899939_0258

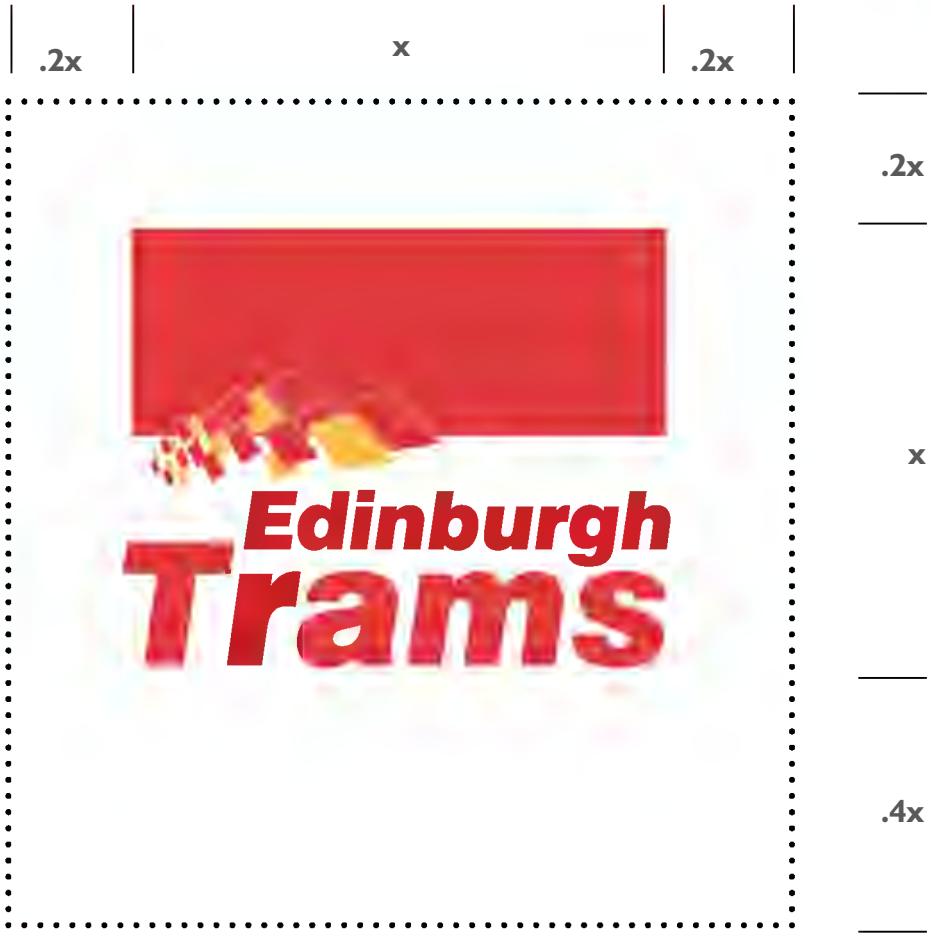
Mark usage

Another option when using a single colour mark, for example when positioned over an image as illustrated here, is to use a transparent mark.

TIE00899939_0259

Exclusion Zone

The dotted line indicates the zone into which no other graphic devices should be placed.



TIE00899939_0260

Colours

Three core colours make up the brand palette:
Red
Gold
Madder

In certain circumstances gold metallic ink in the form of PMS 873 can be used.

Stationery

Business cards follow the same format as the letterhead.

TIE00899939_0263

Marketing

The examples we show here illustrate the basic image and values the Edinburgh Tram brand should convey:

Clean

Simple

Easily understood

TIE00899939_0264

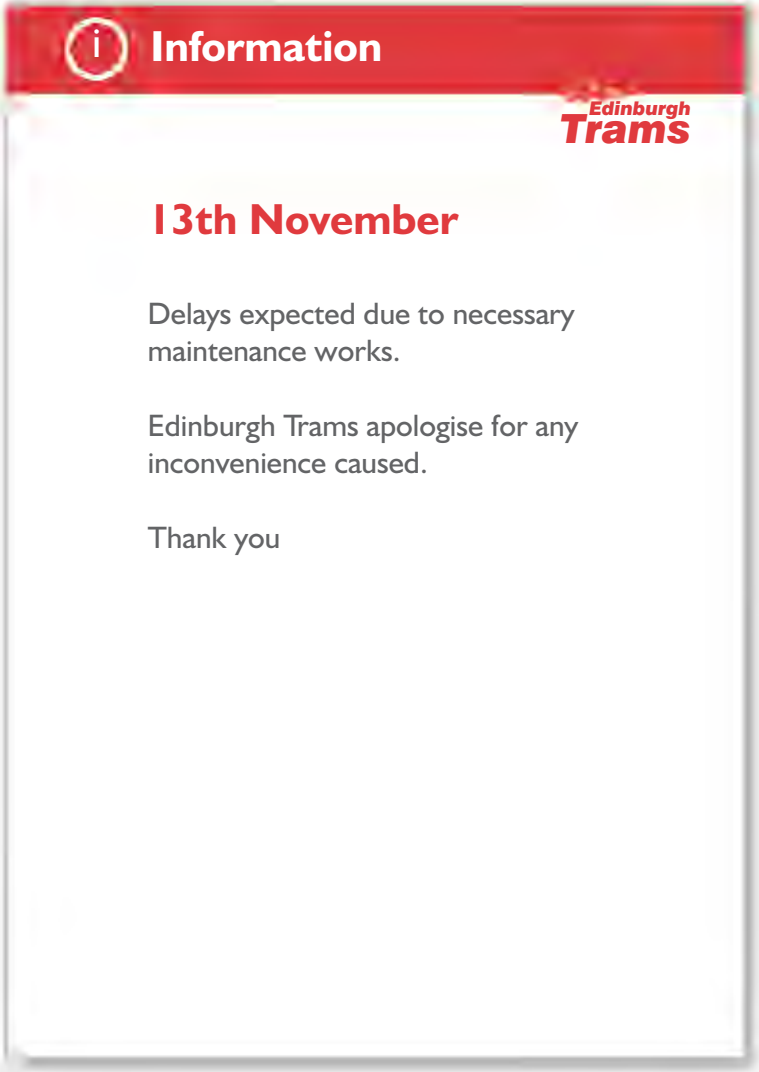
Passenger information

Again information should follow the 3 basic rules:

Clean

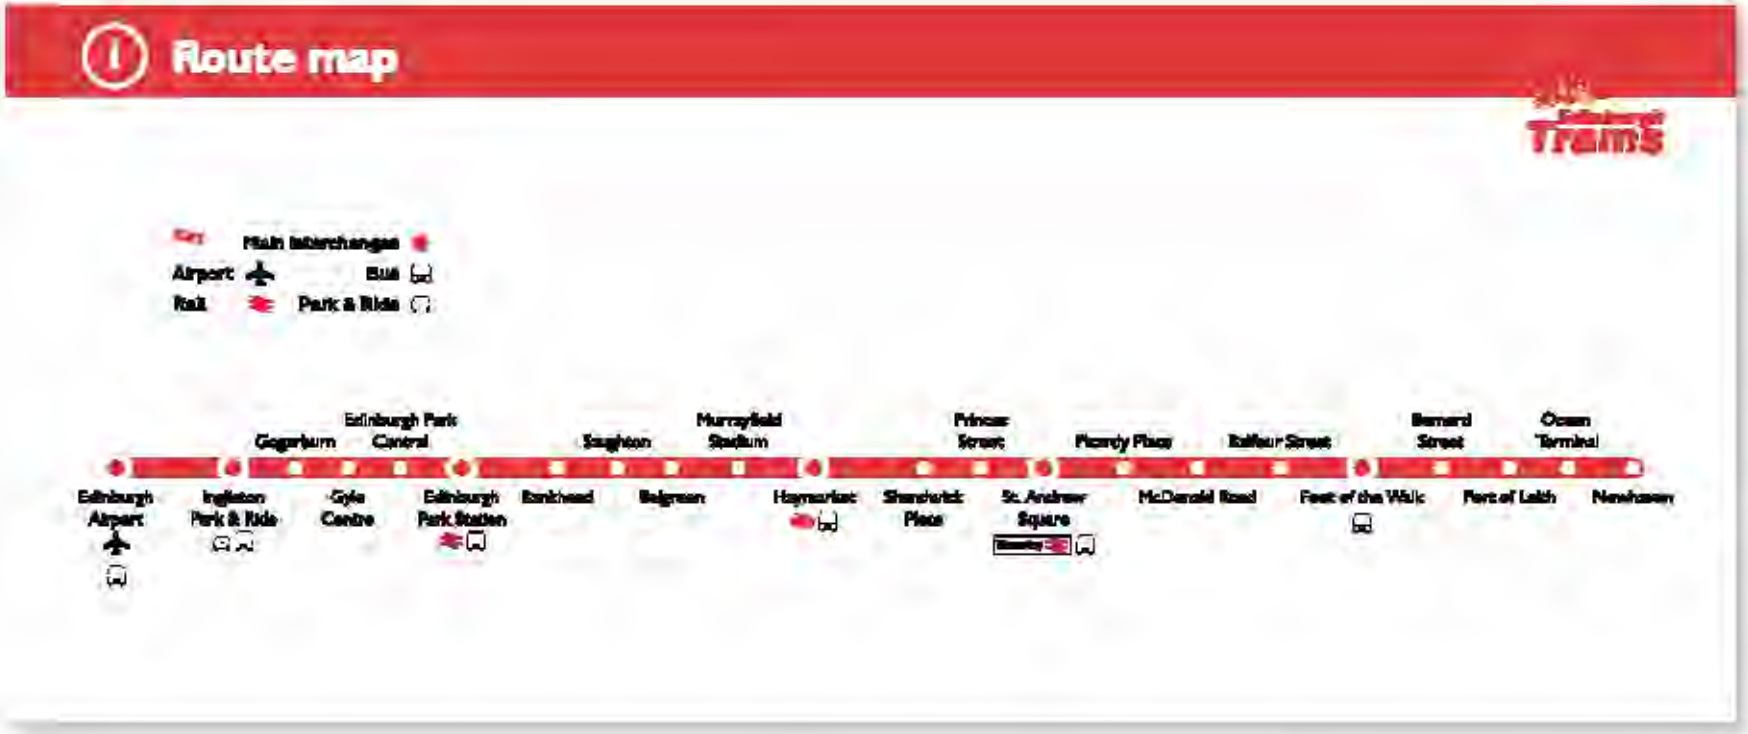
Simple

Easily understood



TIE00899939_0265

Passenger information



Web site

The web site should share the same layout and 'feel' as its sister site for Lothian Buses.

Consistency in navigation and layout help to reinforce the integrated transport concept.

TIE00899939_0267

Pictograms

Informational pictograms

Statutory pictograms

Directional pictograms

Space Bar Sample of Space Bar position

TIE00899939_0268

External design

Reinforcing the strategy of creating a visually integrated public transport system for Edinburgh, the tram livery draws from the Lothian Bus livery. Some modifications have been made in order to satisfy the Rail Vehicle Accessibility Regulations (RVAR) such as the red door colour that provides the required contrast of the doors from the tram body.

Colours follow the Brand palette with the exception of the 'gold' where, on the livery only, a gold vinyl is to be used as on Lothian Buses and not by using the specifications in this document.

Four designated advertising zones have been identified to control the revenue generating advertising presence that the business plan requires. Two trams have been allocated for 'all over' advertising and they will be subject to a strict, separate, design protocol.

TIE00899939_0269

Interior

As with the exterior the tram interior will use some of the same colours and finishes to be found on the buses. These will have to be adapted to ensure compliance with RVAR as there are strict technical guidelines on issues such as colour contrast based on Light Reflection Factors which affects all the visible surfaces within the vehicle. Compliance with RVAR is a legal requirement and the end result will be determined in consultation with the DfT Mobility Unit.

The image opposite is an early iteration of the proposed tram interior and will be developed through the process described above.

TIE00899939_0270

Tram stops

The finishes of the tram stop elements are generally of a neutral colouration.
The introduction of the Edinburgh Trams' key red as a highlight colour should therefore be used sparingly and appropriately as indicated here. The red has been introduced as an integral, functioning part of the shelter structure and serves to carry the high level stop sign. Elsewhere the red is introduced as signage or through information points.

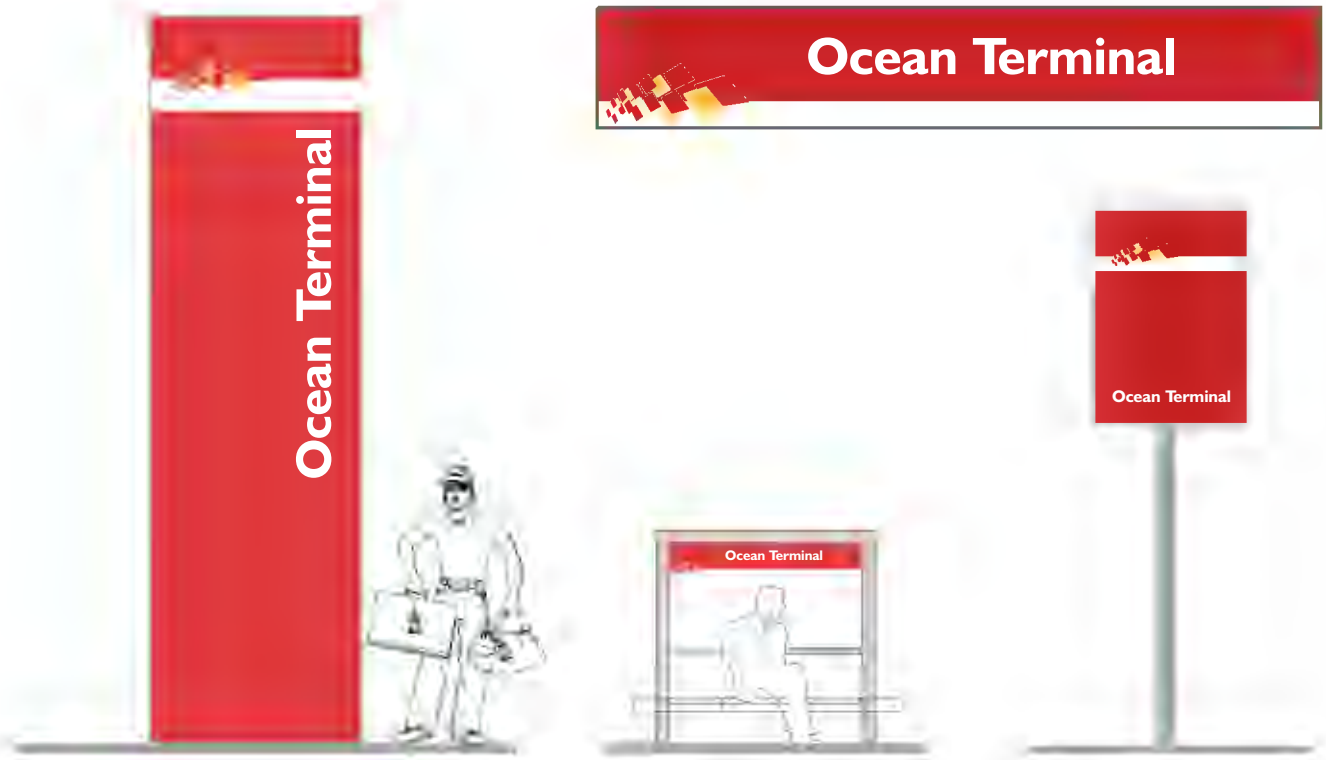
Subtle use of the harlequins can be made on such areas as glazing manifestation as illustrated here. A further example of using the branding in a functional, rather than superficial, way.

TIE00899939_0271

Signage

The signage concept has been conceived to create strong, highly visible and legible points of reference and information.

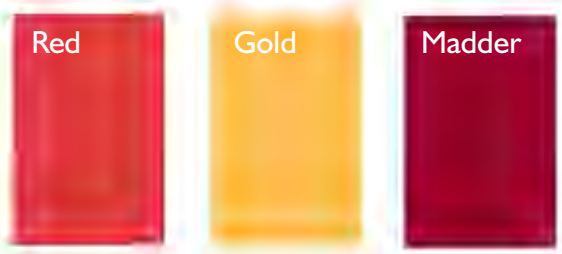
As part of the tramstop elements they follow the principle of introducing the Edinburgh Trams key red in a controlled, functional manner whilst reinforcing the identity and aiding recognition.



TIE00899939_0272

Colours

The red, madder and gold are freely available in a variety of finishes such as paint and powder coating by using the RAL specification here.



RAL 3020 RAL 1004 RAL 3005

TIE00899939_0273

Uniforms

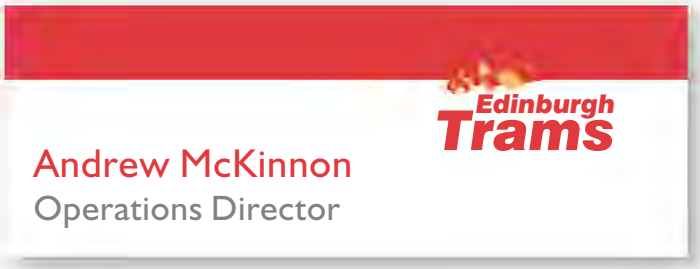
To assist those who are involved in procuring the staff uniforms the following images are intended as a simple guide to make sure the image conveyed through the uniforms is consistent with other areas of the brand's application.

By keeping the uniforms neutral the key red can then be introduced as a detail. As with other elements of the system the red should be used sparingly as shown here.

TIE00899939_0274

Name badges

Name badges follow the guidelines established for communications.



TIE00899939_0275

1 Introduction

1.1 Summary of Overall Scope

The Infraco shall be fully responsible for the works and services described in these Employer's Requirements and in the Agreement:

1.2 Infraco Works

Summary Scope of Infraco Works

Detailed requirements associated with the infrastructure and equipment for the Infraco Works are described within other Sections of these Employer's Requirements and the Agreement.

The scope defined within this section is limited to a summary of the principal elements of the Infraco Works:

- the supply of Trams in accordance with the Tram Supply Agreement;
- the provision of maintenance as defined in the Tram Maintenance Agreement and Section 40 (Maintenance) of these Employers Requirements;
- the provision of Trackwork - A total of approximately 18.8km and 5.5km (for phases 1a and 1b, respectively) of track kilometres, on street and off street trackform;
- the provision of Tramstops - A total of 22 Tramstops and 1 staff only Tramstop for Phase 1a, and 9 Tramstops for Phase 1b, together with associated infrastructure;
- the provision of Tramstop furniture, systems and equipment;
- the provision of interchange facilities as provided in the design information;
- the provision of points and crossings including point machines, their power supplies, point heating and the control thereof, detection and indication;
- the provision of traffic / tram signals;
- the provision of Tram detection system;
- the provision of all 11kv, 400volt and 230 volt power supplies;
- the provision of traction substations and d.c. traction distribution;
- the provision of OLE (Including all trackside isolators);

- the provision of supervisory control, and communication systems and sub-systems including all field, Tram (free issue for installation by Tram Supplier) network and central control and interface equipment;
- Develop and manage an EMC strategy that includes appropriate immunisation of all Third Party neighbouring systems including Network Rail.
- Accept delivery of fixed and portable Ticket Vending Machines from **tie** and then undertake the installation of such machines and the provision of the necessary supporting infrastructure (including power supplies, communication links and foundations). The maintenance of these machines is not within the scope of the Infraco;
- Provision of the Depot containing:
  - A depot building containing a maintenance workshop and associated workshops, offices, stores and equipment;
  - The Control Centre (First Floor) and associated equipment room (Ground Floor);
  - The Edinburgh Tram Network administration offices;
  - A depot yard and stabling area;
  - A traction power substation;
  - A building services transformer and associated works;
  - All necessary services and utility connections;
  - A boiler house;
  - Hard-standing for a diesel alternator; and
  - The Depot access road.
- Provision of Tram associated road works;
- Provision of traffic management;

- Provision of road furnishings;
- Provision of bridges, structures and retaining walls, including the necessary services and facilities e.g. lighting, drainage, fencing and guardrails, earthing and bonding etc.;
- Civil works including earthworks (inclusive of contamination removal, demolition, Site clearance, excavation, bridges and structures, all necessary temporary works and drainage;
- Demolition/modification of certain buildings as identified in the design phase.
- Relocating the War Memorial at Haymarket Junction (the Infraco shall be required to obtain confirmation from **tie** prior to such re-location that **tie** is satisfied that all relevant Consents have been obtained by the Infraco;
- Landscaping including, hard landscaping, soft landscaping, boundary treatments;
- Provision of lighting;
- Provision of signage;
- Provision of fencing;
- The provision of all temporary works and installations (to allow construction of the Edinburgh Tram Network and achievement of delivery of the Edinburgh Tram Network into service) including the provision of connections to appropriate power supplies.
- to carry out and/or manage to completion the design of the Edinburgh Tram Network, including the management coordination, and specification and implementation of the necessary works for the modification of the Urban Traffic Control System;
- to procure and install all materials and equipment, required for the complete operating Edinburgh Tram Network, as summarised and as further detailed within these Employer's Requirements;
- to supply documentation as defined within these Employer's Requirements, including design documentation, as-built documentation, statutory information, as-built information, maintenance documentation and training documentation;
- to energise the Edinburgh Tram Network including liaison with and management of all interested and affected parties;

- to provide access and support for driver training;
- to provide comprehensive management and technical and maintenance services and Deliverables to ensure that all of the above is delivered in full compliance with these Employer's Requirements.

1.3 Phase 1a Scope Statement Regarding Inclusion for the Phase 1b Option

Phase 1a shall meet these Employer's Requirements and provide full functionality as a standalone tram network. The scope for Phase 1a shall include the following elements in order to facilitate the addition of Phase 1b as an option instructed later under this Agreement.

1. The structure, earthworks and necessary works at Roseburn Junction shall include all sub-structure, structures, earthworks, ductwork, drainage and fitting out to bottom of rail fixing, including the provision for the OLE spur connection for Phase 1b from Phase 1a and OLE supports, for the delta connection of Phase 1b with Phase 1a. The structure, earthworks and works shall extend as a minimum such that the subsequent construction of Phase 2b does not interfere with the operation of Phase 2a except to the extent allowed by the possessions detailed below.

2. Plain line shall be installed along the Phase 1a route through the Roseburn Junction, however the Infraco shall ensure that the design and construction shall provide for the turnouts to be installed in a maximum of one 54 hour possession of the Phase 1a inbound and outbound tracks between Murrayfield and the Western end of Haymarket Yards turnback. Traction power supply sectioning shall allow the turnback of service trams throughout the possession. In addition, up to 28 normal night-time possessions shall be available for preparatory works and commissioning works.

3. The central supervisory, control and communications systems provided by the Infraco for Phase 1a shall have sufficient capacity and functionality to accommodate the incorporation of Phase 1b. This shall include all software, firmware, databases with the same control and indication functionality as for Phase 1a. All central control system hardware shall be provided to allow the connection of the Phase 1b infrastructure by means of cable connection alone.

4. The central supervisory, control and communications systems shall be designed and configured such that the commissioning of Phase 1b infrastructure shall be possible without material impact on the passenger services operating on Phase 1a or the operational Control Centre prior to assimilation of Phase 1b with Phase 1a.

5. Documentation, drawings, manuals, spare parts and training shall be provided for Phase 1a on a standalone basis, but shall be in the form that is expandable to accommodate Phase 1b as and when constructed..

2 Operations and Performance

2.1 Scope

The scope of this Section of the Employer's Requirements defines the Operations & Performance requirements applicable to the Edinburgh Tram Network (ETN) which the Infraco must comply with.

2.2 Network Description and Principles

The Edinburgh Tram Network will operate as a 'line-of-sight' tramway, with tramway signalling provided at road junctions and at tramway junctions where appropriate. A fleet of Trams will serve the ETN providing level boarding with low level platforms located along the routes.

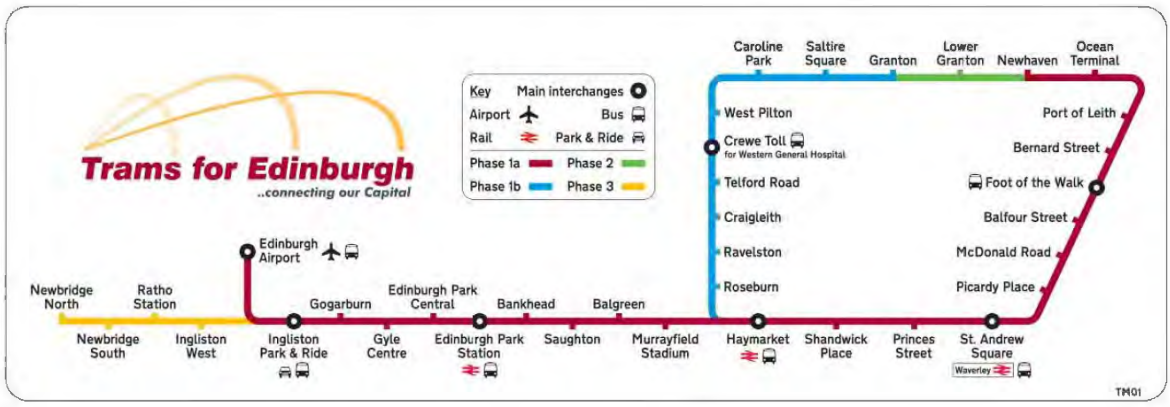

Figure 1

For ease of reference, a diagram of the Edinburgh Tramway Network is shown in Figure 1 above.

The route in the city from Newhaven to Haymarket (approximately half of Phase 1a) and from West Granton Access to Granton Square (approximately a third of Phase 1b) runs mainly on-street with varying degrees of segregation. The Roseburn corridor (approximately two thirds of Phase 1b) is a segregated off-street alignment, shared with a combined footpath and cycleway. Most of the route between Haymarket and the Airport (the remaining half of Phase 1a) is segregated from road traffic.

The whole ETN will consist of double track.

The Depot, located at Gogar, will provide maintenance and stabling facilities for the entire fleet of Trams operating on the ETN. It will also contain the administration and management offices, including an operations and Control Centre, from where the ETN will be managed and maintained.

Transport Services shall be operated in accordance to a timetable, as agreed between the Operator and **tie**, to achieve reliable and consistent operation at the required tram frequencies.

Throughout these Employer's Requirements reference is made to three timetables that shall be progressively introduced in response to patronage demand growth. These are intended to allow for reliability growth and Operator familiarisation with the Edinburgh Tram Network. The following definitions shall apply:

- **Operational Timetable**

  A timetable developed by **tie**, which provides Trams at a frequency of twelve Trams per hour in each direction on the common section between Haymarket and Ocean Terminal. Six Trams per hour in each direction are operated on the sections between Haymarket and the Airport and between Ocean Terminal and Newhaven. For Phase 1b, Trams at a frequency of six trams per hour in each direction on the section between Haymarket and Granton square shall be operated. The Operational Timetable shall be in effect from the Service Commencement Date for a minimum of one year.

- **AM and PM Peak Enhanced Timetable**:

  A timetable developed by **tie**, which provides Trams during the AM and PM peaks at a frequency of sixteen Trams per hour in each direction on the common section between Haymarket and Ocean Terminal. For Phase 1b providing Trams at a frequency of eight trams per hour in each direction on the section between Haymarket and Granton square for the AM and PM peak times only, reverting to the Operational Timetable during the inter peak period. The AM and PM Peak Enhanced Timetable shall be introduced no earlier than one year after the Service Commencement Date and shall be operated for a minimum of six months.

- **Enhanced Timetable:**

  A timetable developed by **tie**, which provides Trams at a frequency of sixteen Trams per hour in each direction on the common section between Haymarket and Ocean Terminal. For Phase 1b providing Trams at a frequency of eight Trams per hour in each direction on the section between Haymarket and Granton square. The Enhanced Timetable shall be introduced no earlier than two years after the Service Commencement Date.

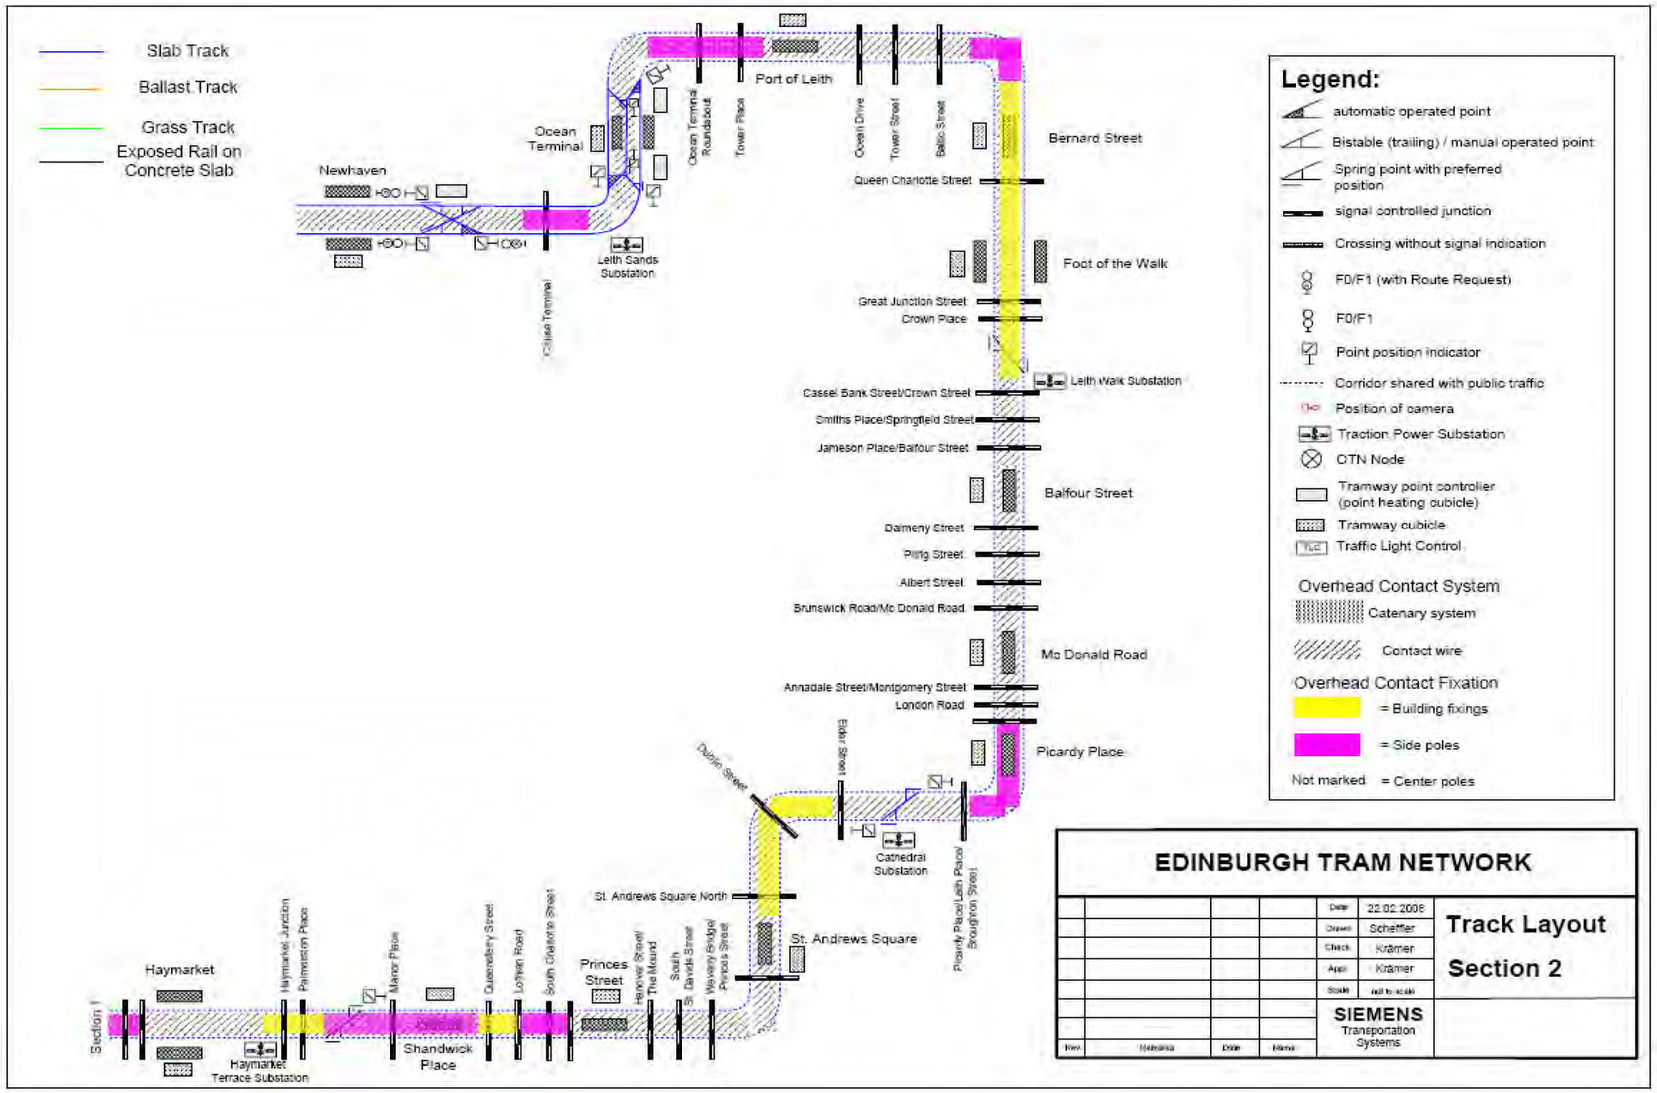

Figure 3 – Edinburgh Tram Phases 1a and 1b Network Diagram

2.3 Specific Operations and Performance Requirements

2.4 Tramstop Location and Types

The Tramstop location and types are detailed in the following table. The acronyms given are provisional.

ID	Tramstop	Platform Style
	PHASE 1a	
AIR	Edinburgh Airport	1 Centre
IPR	Ingliston Park and Ride	2 Side
GBN	Gogarburn	2 Side
DEH	Depot Halt (Staff Only)	2 Side
GYL	Gyle Centre	2 Side
EDP	Edinburgh Park Central	2 Side
EPS	Edinburgh Park Station	2 Side
BNK	Bankhead	2 Side
SGT	Saughton	2 Side
BAL	Balgreen	2 Side
MUS	Murrayfield Stadium	2 Side
HAY	Haymarket	2 Side
SHP	Shandwick Place	1 Centre
PST	Princes Street	1 Centre
SAS	St Andrew Square	1 Centre
PPL	Picardy Place	1 centre
MDR	McDonald Road	1 Centre
BFS	Balfour Street	1 Centre
FOW	Foot of the Walk	2 Side
BER	Bernard Street	1 Centre
POL	Port of Leith	1 Centre
OCT	Ocean Terminal	1 Centre, 1 Side
NEW	Newhaven	2 Side

	PHASE 1b	
GRT	Granton	1 Centre
SSQ	Saltire Square	2 Side
CPK	Caroline Park	2 Side
WPN	West Pilton	2 Side
CTL	Crewe Toll (for Western General)	2 Side
TEL	Telford Road	2 Side
CRA	Craigleith	2 Side
RAV	Ravelston	2 Side
ROS	Roseburn	2 Side

Table 1 – Edinburgh Tram Phases 1a and 1b Network Tramstop Location and Details

2.5 Expansion (including Line 3)

The Infraco shall ensure that the ETN shall be designed to permit expansion to include the following elements:

- Phased implementation of the ETN and associated fleet increases (including the implementation of the Phase 1b Option);
- Addition of Phase 2 of the ETN (as shown in Figure 1), including provision of Lower Granton Road stop, to close the loop along the sea front between Newhaven and Granton Square using the powers in the Edinburgh Tram (Line One) Act 2006;
- Addition of Phase 3 of the ETN (as shown in Figure 1), including associated stops at Ingliston West, Ratho Bridge and Newbridge South, from Ingliston Park and Ride to Newbridge using the powers in the Edinburgh Tram (Line Two) Act 2006;
- Addition of Line Three (From the junction of Princes Street/South St. Andrew Street to Royal Infirmary);

Extensions to the ETN set out above are not currently covered by these Employer's Requirements. However, the ETN must be designed in such a way as not to impede this future expansion.

For the avoidance of doubt, the following are covered by these Employer's Requirements.

- Future frequency increases beyond the enhanced service frequency of 8 & 8 tph;
- Increased operating hours beyond the scheduled last Tram of 23:59 and before the scheduled first Tram at 06:00;
- Associated impacts of increased staff numbers from 361 initially anticipated up to a maximum of 403 e.g. accommodation at the Depot.

2.6 Depot Locations

The Edinburgh Tram Network Depot is located at Gogar and shall be capable of providing capacity for the stabling of 27 trams of 44m in length, clear of fouling points in the stabling area.

The Depot shall be capable of future expansion to provide the capacity required for the identified future service frequencies and/or the requirements for Line Three, such that the Depot can be extended to stable 36 Trams of 44m in length, clear of fouling points in the stabling area.

2.7 Service Patterns, Operating Hours and Frequencies

The ETN shall support a daily service, all year round. The proposed initial service patterns, operating hours and frequencies are as follows:

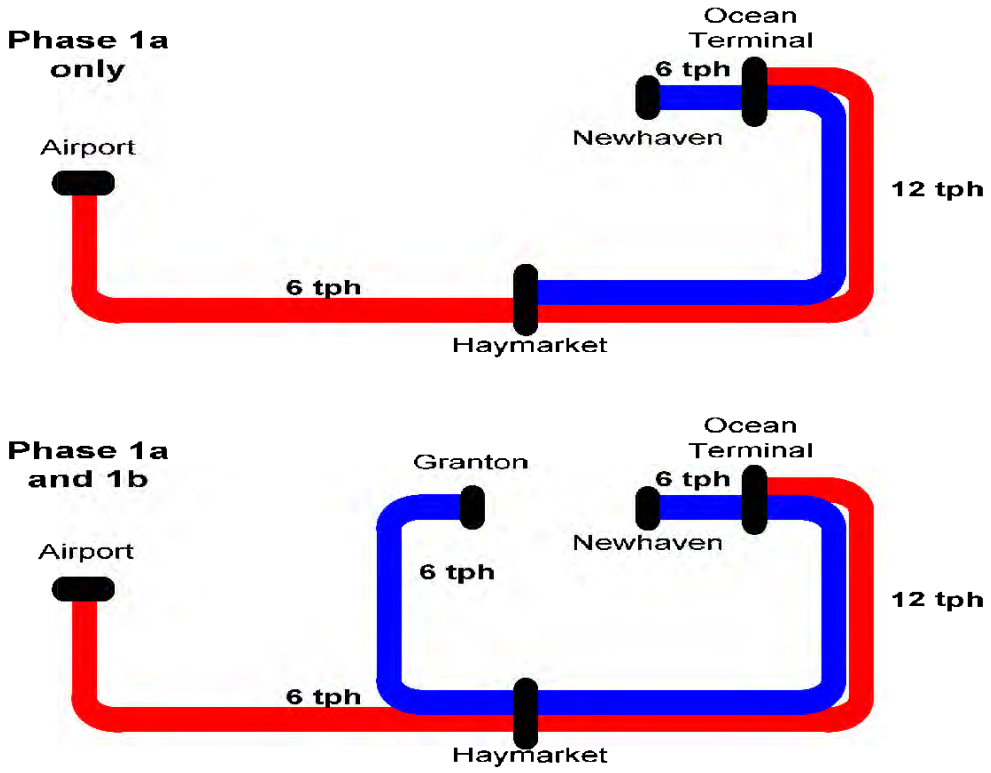

Figure 4 - Service Patterns for the Operational Timetable 6 & 6 Tram per hour scenario

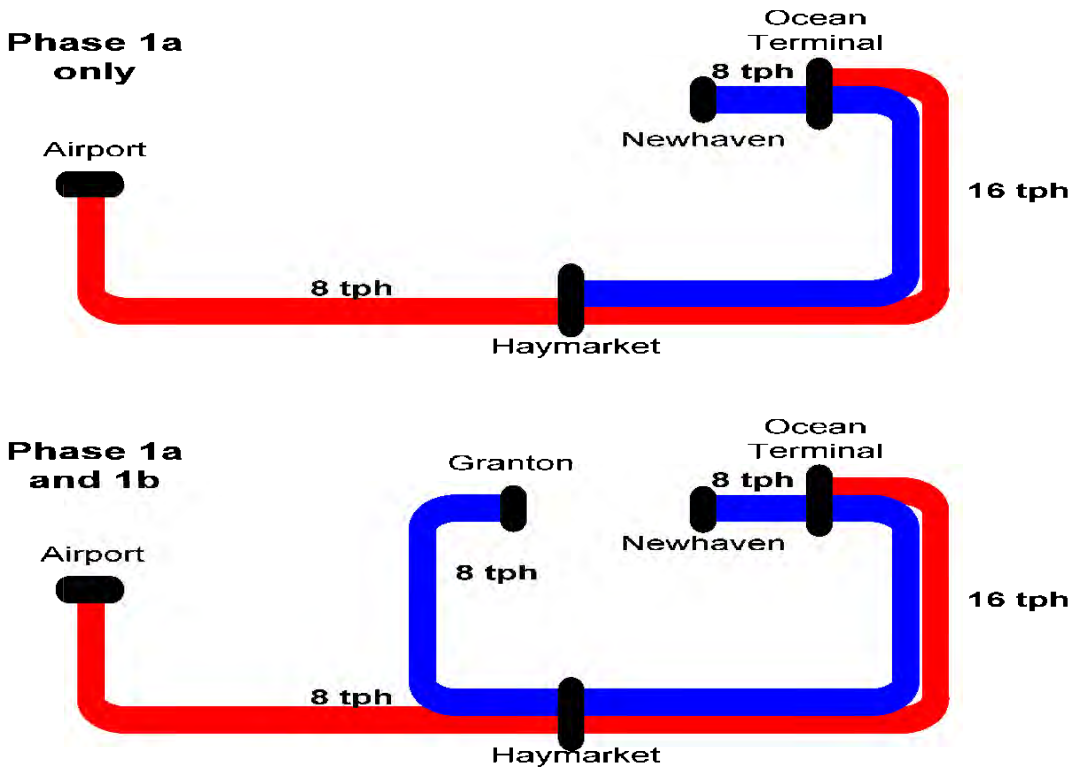

Figure 5 - Peak Service Patterns for the Enhanced AM & PM Peaks Timetable and the Enhanced Timetable 8 & 8 Tram per hour scenario

2.8 Operating Hours and Frequencies

The first and last Tram services and frequencies for 6 & 6 Tram per hour scenario are shown in Figure 4 - service patterns for the Operational Timetable 6 & 6 Tram per hour scenario and for 8 & 8 Tram per hour scenario in Figure 5.

These scenarios are based upon the following assumptions and conditions:

- The two balanced services combine to give a total of 12 or 16 Trams per hour per direction on the common section between Ocean Terminal and Haymarket are required during the daytime to replace withdrawn bus services (and therefore demand and capacity) on Leith Walk;
- For the purposes of ramping up/down service Short workings between Edinburgh Airport (Phase 1a) / Granton Square (Phase 1a & Phase 1b) or Haymarket (Phase 1a only) and St. Andrew Square are based on terminating Trams at St. Andrew Square. The location of the turnback is at York Place;
- Edinburgh Airport service Tram frequency is ramped up/down from Ocean Terminal. Granton Square (Phase 1a & Phase 1b) or Haymarket (Phase 1a only) service Tram frequency is ramped up/down from Newhaven;
- Trams going into service between Gogar Depot and Ocean Terminal/Newhaven will run "in service" from the Gyle (first tram Gyle to Ocean Terminal approx. 05:15 Monday to Saturday inclusive);
- Haymarket (Phase 1a only) or Granton Square (Phase 1a & Phase 1b) service Trams going out of service running between Newhaven and Gogar Depot will run "in service" as far as the Gyle;
- St. Andrew Square curtailed Trams going out of service running between St. Andrew Square and Gogar Depot will run "in service" as far as the Gyle;
- Edinburgh Airport service Trams going out of service will run "in service" from Ocean Terminal to Edinburgh Airport with a short "dead run" from Edinburgh Airport to Gogar Depot;

- The period of time between the last Tram returning to the depot at night and the first Tram leaving the Depot in the morning Monday to Saturday inclusive is anticipated to be 4hrs 30 min, although this may be subject to amendment. Work requiring possessions will have to be agreed with the Operator. Subject to agreed possessions, work may be allowed on the Edinburgh Tram Network infrastructure for 3 hours and 45 minutes, depending on location, each night and allowing time for the implementation and withdrawal of isolations and/or possessions; and

- The provision of Transport Services is based on the requirement to always have a Tram present at the Airport Tramstop.

Table 2 – First and Last Tram Times for the 6 & 6 Tram per Hour Operational Timetable

1b	Airport to Ocean Terminal	0	6	[redacted]		6[a]	0
1b	Ocean Terminal to Airport	6	6	[redacted]		6	0
1b	Granton to Newhaven	0	6	[redacted]		6[b]	0
1b	Newhaven to Granton	6	6	[redacted]		6[c]	0

Note: The numbers in individual cells give the service frequency starting from the time at the top of the relevant column.

Network / Phasing	**Service frequency commencing at:**	**Sunday (trams per hour)**					
		first tram **07:00**	**07:45**	**08:00**	**08:20**	**23:15**	last tram **23:59**
1a	Airport to Ocean Terminal	0	6	6	6	6[a]	0

Notes:

[a] from approx 23:15 trams run from Airport - St Andrew Sq only

[b] from approx 23:15 trams run from Granton - St Andrew Sq only

[c] from approx 23:15 Granton trams run from Newhaven - Haymarket continuing in service on to Gyle

[d] from approx 19:20 (18:50 Saturdays and 18:20 Sundays) Haymarket trams running from Newhaven - Haymarket continue in service to Gyle

2.9 Service Frequencies and Expansion

The design of the ETN shall support the Operational Timetable and Enhanced Timetable service frequencies set out in Table 2 – First and Last Tram Times for the 6 & 6 Tram per Hour Operational Timetable, Table 3 - First and Last Tram Times for the 8 & 8 Tram per Hour Enhanced AM & PM Peak Scenario and Table 4 - First and Last Tram Times for the 8 & 8 Tram per Hour Enhanced AM & PM Peak Scenario. In addition to this, the ETN shall operate the same service pattern as set out in Table 4 - First and Last Tram Times for the 8 & 8 Tram per Hour Enhanced AM & PM Peak Scenario above, but with the Trams per hour increased by 50% throughout without upgrade or loss of performance for up to a maximum of 2 hours between Ocean Terminal and Picardy Place, and indefinitely between Picardy Place and the Airport.

The service patterns for the ETN are defined as the Operational Timetable (as shown in Table 2 – First and Last Tram Times for the 6 & 6 Tram per Hour Operational Timetable), the AM and PM Peak Enhanced Timetable (as shown in Table 3 - First and Last Tram Times for the 8 & 8 Tram per Hour Enhanced AM & PM Peak Scenario) and the Enhanced Timetable (as shown in Table 4 - First and Last Tram Times for the 8 & 8 Tram per Hour Enhanced AM & PM Peak Scenario).

A simulation indicating the power consumption of the ETN service patterns as defined above and considering the braking energy regeneratated by the Tram shall be performed during design phase.

2.10 Special Working and Degraded Operation

Special working is required at certain times of the year, as detailed in Table 8 - Reconfiguration of Service due to the Closure of Princes Street to allow for the short workings on the network routes, when sections of the ETN shall be closed to allow for example Hogmanay, the Edinburgh Festival and other special events and festivals.

The design of the ETN shall allow services to be turned back at the locations detailed in Table 7 - Turnback Locations. The precise chainages where turnbacks are to be installed is shown on the alignment drawings.

ID	Location
	PHASE 1a
EPS	Edinburgh Park Station
HAY	Haymarket Yards
SHP	Shandwick Place
PPL	Picardy Place
FOW	Foot of the Walk (Leith Walk)

OCT	Ocean Terminal
	PHASE 1b
CTL	Crewe Toll

Table 7 - Turnback Locations

Note that Trams may also be turned back at Gogar Depot, and the facility to allow this shall be provided by the Infraco.

The individual services will be reconfigured to operate using the turn-back facility nearest to the affected area. An example is the requirement to close Princes Street for Hogmanay. In this situation the services shall be reconfigured as detailed in Table 8 - Reconfiguration of Service due to the Closure of Princes Street.

Service alteration for Closure of Princes Street			
Original Route of Service	**Affected Area**	**Trams / Hour**	**Revision**
Between Airport and Ocean Terminal	Princes St. section closed	6 or 8	Services run between Airport and Shandwick Place. No service runs between Shandwick Place and Picardy Place. Services run between Picardy Place and Newhaven
Between Haymarket and Newhaven (Phase 1a only)	Princes St. section closed	6 or 8	No service runs between Haymarket and Picardy Place[a]. Services run between Picardy Place and Newhaven
Between Granton Square and Newhaven (Phase 1b)	Princes St. section closed	6 or 8	Services run between Granton Square and Shandwick Place. No service runs between Shandwick Place and Picardy Place. Services run between Picardy Place and Newhaven

a – Assumption that no services will run the short leg Haymarket to Shandwick Place when Princes Street is closed.

Table 8 - Reconfiguration of Service due to the Closure of Princes Street

2.11 Journey Time and Runtime

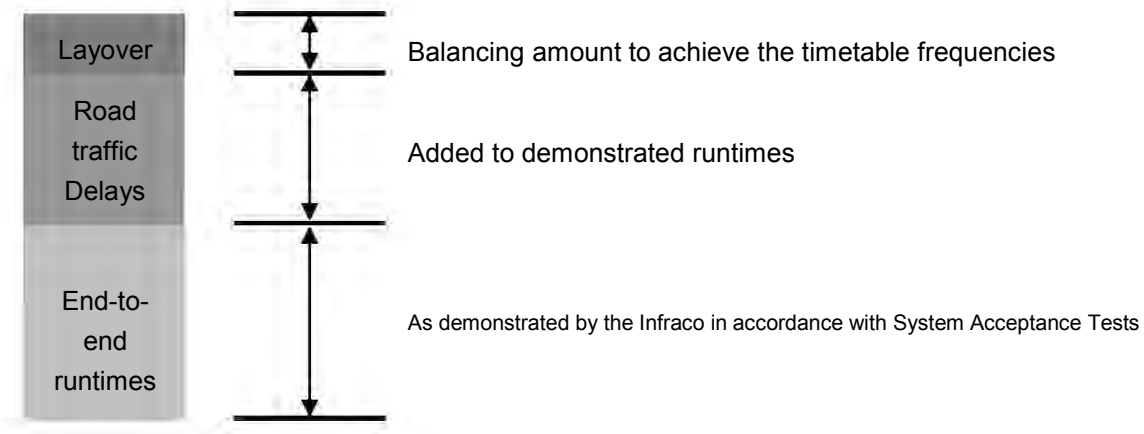

Figure 6 - Maximum Journey Times

The required maximum journey times for the Edinburgh Tram Network, quoted as operational journey time including dwell times of 25 seconds at each Tramstop, as defined during Preliminary design shall be as follows:

Phase 1a		
Airport to Ocean Terminal	in either direction including 25 secs dwells at Tramstops	42mins 18 secs
Phase 1b		
Granton Sq to Newhaven	in either direction including 25 secs dwells at Tramstops	39mins 26 secs

For the avoidance of doubt these are end to end journey times and the Infraco shall demonstrate during System Acceptance Tests defined in Section 23.18 (Testing and Commissioning) of these Employer's Requirements the trip times which can be achieved by the Trams running on the ETN infrastructure as developed and adjusted from the above base line in accordance with Section 2.12. These do not include layover time at the turnback stops as shall be agreed between the Operator and **tie** in order to develop the Operational Timetable.

2.12 Journey Time and Runtime

The Infraco shall continue to develop and refine the runtime model as the design progresses and, at a frequency of no less than every three months or upon **tie**'s request, provide updated reports demonstrating that the maximum run times can be achieved. The Infraco shall also prepare a model of the electricity consumption linked to the run time model and shall use reasonable endeavours to optimise the system design and construction to minimise electricity usage.

Reference should be made to the Runtime Simulation Stage 3 Report (ref: ULE90130-SW-REP-00238-V3) for vehicle performance characteristics and actual driver operations.

The operational and modelling assumptions that shall be used in all modelling of runtime and operational timetables are set out in Table 9 - Operational and Modelling Assumptions.

Item	Value	Notes
Door Performance	12 seconds	Defined as the time for the doors to open and close including DDA requirements and passenger and driver reaction times.
Boarding and Alighting Time	13 seconds	Defined as the time between the doors being fully open and the sounding of the door closing tone.
Dwell Times	25 seconds a constant in modelling and during end to end journey time tests, to be refined for the purposes of the timetables to be Tramstop specific	Average dwell, made up of the door performance time and the boarding and alighting time
Loading	AW2 all seated 4 pass/m2 standing	
Gradient	+/- 8% Max. Note: This value is the maximum allowable gradient for track design.	Gradient data for the complete ETN has been developed in the design phase This identified major gradients at St. Andrew Square and the line alongside Gogar Depot

2.13 Operational Allowances and Rules for Timetabling

An operational allowance will be added to the end to end runtimes demonstrated through testing to meet those quoted in this section to ensure a robust Operational Timetable is constructed.

Requirement	Allowance
Operational Journey time allowance	Newhaven to Haymarket = 1.5 minutes Ocean Terminal to Airport = 1.5 minutes Newhaven to Granton Square = 45 secs (Phase 1b only)
Layover	4 minute minimum or 10% of timetabled runtime, whichever is the greater taken at the terminus for each end to end trip with the exception of the Airport Tramstop where a Tram is required to always be present. Crew change-over locations to be determined as the Operational Timetable is refined.

Table 10 - Operational Runtime Allowances

2.14 Miscellaneous Operational Requirements

2.15 Comfort Break Facilities

Facilities shall be available for driver comfort breaks at the nominated layover locations detailed in Table 11 - Layover Facilities

Location	Comments
Edinburgh Airport	Crew Change Facility[1]
Ocean Terminal	Normal Terminus
Granton Square	Normal Terminus
Haymarket	Crew Change Facility

Table 11 - Layover Facilities

[1] *Damian has already instructed this change.*

At these locations access shall be provided to a suitable toilet with hand washing facilities.

Crew Change Facility

A crew changing facility shall be provided adjacent to the Haymarket Tramstop. This facility shall provide tram crew with access to a toilet with hand washing facilities, a drinking water supply, suitable heating, power, lighting, drainage and connection to the telephone network.

2.16 Performance and Reliability

The design and construction of the ETN shall be demonstrated by RAMS analysis to enable the individual systems availability targets stated in these Employer's Requirements to be met. It shall enable an overall tram punctuality for System technical causes of at least 99% in accordance with the calculation of the Punctuality Service Element contained in Schedule 6 of the Agreement.
As measured on a 28 day basis at the following monitoring points along the route at least 99% of the Trams shall be no earlier than one minute and no greater than two minutes late, caused by technical failure, compared to the scheduled headway.

Monitoring points

a) Phase 1a: for the purposes of monitoring arrival and departure headways between Trams:

- Edinburgh Airport.

b) Phase 1a: for the purposes of measuring departure headways between Trams only:

- Edinburgh Park Station;
- Haymarket;
- Foot of the Walk;
- Leith; and
- Picardy Place.

c) Phase 1b: for the purposes of measuring departure headways between Trams only:

- Crewe Toll (northbound only); and
- Granton Square.

The performance mechanism for Infraco is contained within this Agreement. The design of the ETN shall be such that it allows the ETN to operate safely and effectively in all modes.

Normal Mode being that used to establish the operational timetable. Degraded Mode being restricted operation due to failures or disruption on the tramway or the adjacent highway network.

2.17 Network and Service Pattern

See table 2 – Service Patterns for the Operational Timetable 6 & 6 Tram per hour scenario and table 5 – Peak Service Patterns for the Enhanced AM & PM Peaks Timetable and table 6 – the Enhanced Timetable 8 & 8 Tram per hour scenario] for further information; for daily service patterns; and note that trams are to be co-ordinated between OCT and HAY to give an even headway pattern in both directions.

2.18 Layover s

The Operational Timetable and the Enhanced Timetable developed by the Operator and the Infraco's Proposals shall allow for the following:

- An operational Tram can always be present at the Airport Tramstop;
- Additional layovers to be added to the minimum values to deliver the required headways where appropriate. This additional layover maybe apportioned along the route; and
- The minimum layover requirements are as set out in these Employer's Requirements and these shall be apportioned at the terminus Tramstops only.

Allowance for perturbations that are not road traffic delays:

- These shall be apportioned along the route, as can be seen in Figure 6 - Maximum Journey Times.

2.19 Calculation of Minimum Round Trip Times

In this section, the minimum round trip times for each of the service options are calculated. The calculations add up the elements that are required to establish the round trip times, and the source of each element is stated.

Table 12 - Ocean Terminal – Edinburgh Airport Service (Phase 1a and Phase 1b)

OCT – AIR	
00:42:18	OCT - AIR (includes dwell time)[a]
00:04:52	AM junction delay (OCT - HAY)[b]
00:01:30	additional delay between HAY - AIR[c]
00:00:10	10 seconds on each leg for crossover at terminal Tramstop[d]
00:48:50	Total

AIR – OCT	
00:41:59	AIR - OCT (includes dwell time)[a]
00:06:01	AM junction delay (HAY - OCT)[b]
00:01:30	additional minutes of junction delay between AIR - HAY[c]
00:00:10	10 seconds on each leg for crossover at terminal Tramstop[d]
00:49:40	Total

Layovers	
00:04:55	Minimum layover at OCT end for Airport service[e]
00:10:00	Minimum layover at AIR end for Airport service[f]
00:07:30	Minimum layover at AIR end for Airport service[f]
00:14:55	Total min layover for 6 & 6 tram per hour scenario
00:12:25	Total min layover for 8 & 8 tram per hour scenario
01:53:25	Minimum round trip time for 6 & 6 tram per hour scenario
01:50:55	Minimum round trip time for 8 & 8 tram per hour scenario

Notes:

a Data from 'Edinburgh Tram Network Stage 3 Runtime Simulation Report' (Doc Ref: ULE90130-SW-REP-00238 v2).

b Data from 'Mott Macdonald Report - Traffic Interface Report' (Doc Ref: 0003048//REVC/241103). AM Junction delays between Haymarket and Leith Walk have been used as greater than PM delays.

c of additional junction delay between Haymarket and Edinburgh Airport.

d Estimate of additional time to move through the crossover at the terminus / turnback

e Layover calculated from Table 17 – Number of Trams needed for each service (based on 8 & 8 Trams per hour scenario)

f Based on Headway of 10 or 7.5 minutes, from the requirement for Airport layover in Section 32.

Table 13 - Newhaven – Granton Square Service, (Phase 1b only)

NEW – GRT

00:02:49	NEW – OCT (includes 25s dwell time)[a]
00:36:28	OCT – GRT (includes dwell time)[a]
00:04:52	AM junction delay (NEW - HAY)[b]
00:00:45	additional delay between HAY - GRT[c]
00:00:10	10s on each leg for crossover at terminal Tramstop[d]
00:45:04	Total

GRT – NEW

00:37:00	GRT - OCT (includes dwell time)[a]
00:02:26	OCT - NEW (includes 25s dwell time)[a]
00:06:01	AM junction delay (NEW - HAY)[b]
00:00:45	additional delay between NEW - HAY[c]
00:00:10	10s on each leg for crossover at terminal Tramstop[d]
00:43:56	Total
00:04:15	Minimum layover at NEW end for Granton service[e]
00:04:07	Minimum layover at GRT end for Granton service[e]
00:08:22	Total min layover
01:37:22	Minimum round trip time

Notes:

b Data from 'Mott Macdonald Report - Traffic Interface Report' (Doc Ref: 0003048//REVC/241103)(AM Junction delays between Haymarket and Leith Walk have been used as greater than PM delays)

c Transdev estimate of additional junction delay between Haymarket and Granton Square.

d Transdev estimate of additional time to move through the crossover at the terminus / turnback

e Layover calculated from Table 17 – Number of Trams needed for each service (based on 8 & 8 Trams per hour scenario).

Table 14 - Newhaven – Haymarket Service (Phase 1a only)

NEW - HAY	
00:02:49	NEW - OCT (includes 25 seconds dwell time)[a]
00:18:58	OCT - HAY (includes dwell time)[a]
00:04:52	AM junction delay (NEW - HAY)[b]
00:01:30	Additional delay between NEW - HAY
00:00:10	10 seconds on each leg for crossover at turnback[c]
00:00:54	Additional movement from HAY to turnback[e]
00:29:13	Total

HAY - NEW	
00:19:11	HAY - OCT (includes dwell time)[a]
00:02:51	OCT - NEW (includes 25 seconds dwell time)[a]
00:06:01	AM junction delay (HAY - NEW)[b]
00:01:30	Additional delay between HAY- NEW
	10 seconds on each leg for crossover at terminal
00:00:10	Tramstop[c]
00:00:54	Additional movement from turnback to HAY[e]
00:29:07	Total
00:04:00	Minimum layover at NEW end for Haymarket service[d]
00:04:00	Minimum layover at HAY end for Haymarket service[d]
00:08:00	Total min layover
01:06:20	Minimum round trip time

Notes:

a Data from 'Edinburgh Tram Network Stage 3 Runtime Simulation Report' (Doc Ref: ULE90130-SW-REP-00238v2).

b Data from 'Mott Macdonald Report - Traffic Interface Report' (Doc Ref: 0003048//REVC/241103). AM Junction delays between Haymarket and Leith Walk have been used as greater than PM delays.

c Transdev estimate of additional time to move through the crossover at the terminus / turnback

d Layover calculated from Table 17 – Number of Trams needed for each service (based on 8 & 8 Trams per hour scenario)

e Transdev estimate of runtime between HAY and Haymarket Turnback (20kph over 300m = 5.6m/s over 300m = 54 seconds)

2.20 Summary to Establish Fleet Size

The minimum round trip times determined in Section 2.19 above are used in Tables 15 to 18 to determine the tram Peak Vehicle Requirement (PVR) and fleet size for Phase 1a & Phase 1b:

	OCT - AIR service	NER - HAY service	NER - GRS service
Service used on Phase	1a and 1b	1a only	1b only
Headway (min:sec)	10:00	10:00	10:00
Trams per hour	6	6	6
Minimum round trip time (hr:min:sec)	01:53:25	01:06:20	01:38:52
Actual round trip time needed to provide required headways and minimum layover (hr:min:sec)	02:00:00	01:10:00	01:40:00
Total additional layover to achieve headways (min:sec)	06:35	03:40	01:08
Peak number of trams	12	7	10

Table 15 - Number of Trams needed for each service (based on 6 & 6 Trams per hour scenario)

Network Option	1a	1a and 1b
PVR	19	22
Standby/maintenance/repair/training	3	3
Total tram fleet required	22	25

Table 16 - Number of Trams needed for each Phase (based on 6 & 6 Trams per hour scenario)

	OCT - AIR service	NEW - HAY service	NEW - GRT service
Service used on Phase	1a and 1b	1a only	1b only
Headway (min:sec)	07:30	07:30	07:30
Trams per hour	8	8	8
Minimum round trip time (hr:min:sec)	01:50:55	01:06:20	01:37:22
Actual round trip time needed to provide required headways & minimum layover (hr:min:sec)	01:52:30	01:07:30	01:37:30
Total additional layover to achieve headways (min:sec)	01:35	01:10	0:08
Peak number of trams	15	9	13

Table 17 - Number of Trams needed for each service (based on 8 & 8 Trams per hour scenario)

Network Option	1a	1a and 1b
PVR	24	28
Standby/maintenance/repair/training	3	3
Total tram fleet required	27	31

Table 18 - Number of Trams needed for each Phase (based on 8 & 8 Trams per hour scenario)

2.21 Tram Fleet Kilometre Usage

The journey times and fleet sizes calculated above can be used to derive an approximate annual fleet and per Tram kilometre run of:

INITIAL OPERATING TIMETABLE

6tph	Daily	Days	Km	6tph	Daily	Days	Km
Weekdays	5531	261	1443591	Weekdays	7103	261	1853883
Saturdays	5363	52	278876	Saturdays	6950	52	361400
Sundays	5318	52	276536	Sundays	6815	52	354380
Total			**1999003**	**Total**			**2569663**
Per Tram 27 trams			**74037**	**Per Tram 27 trams**			**95173**
ENHANCED AM & PM PEAK SERVICE							
8tph	**Daily**	**Days**	**Km**	**8tph**	**Daily**	**Days**	**Km**
Weekdays	6217	261	1622596	Weekdays	7840	261	2046240
Saturdays	5363	52	320150	Saturdays	6950	52	361400
Sundays	5318	52	276536	Sundays	6815	52	354380
Total			**2219282**	**Total**			**2762020**
Per Tram 27 trams			**82196**	**Per Tram 31 trams**			**89097**
FLAT DAYTIME PEAK SERVICE							
8tph	**Daily**	**Days**	**Km**	**8tph**	**Daily**	**Days**	**Km**
Weekdays	7436	261	1940796	Weekdays	9347	261	2439567
Saturdays	7292	52	379184	Saturdays	9224	52	479648
Sundays	5318	52	276536	Sundays	6815	52	354380
Total			**2596516**	**Total**			**3273595**
Per Tram 27 trams			**96167**	**Per Tram 31 trams**			**105600**

Figure 7 – Operational Timetable

The principal assumptions are:

- 'Empty' running to and from the Depot is included;

3 General

3.1 Definitions

In these Employer's Requirements, Schedule 1 (Definitions and Interpretation) and the following definitions shall apply:

Table 19 - Definitions

Term	Definition
Act	An Act of Parliament or the Scottish Parliament following consideration and approval of a Bill
AFC	Automatic Fare Collection (see also TVM)
AIP	Approval in Principle for structures
ALARP	As low as reasonably practicable
Approval	(see Consent); also an approval of detail by an authority where consent is deemed to be granted by with prior conditions.
AutoCAD	Proprietary software used for engineering design
AW0 – AW5	Standard loading conditions for Tram Vehicles defined at Section 22.2.3
BRB	British Railways Board
BS	British Standard
CAA	Civil Aviation Authority
Case for Safety	All necessary documentation, information and other requirements pursuant to the Railways and Other Guided Transport Systems (Safety) Regulations 2006;
CAR	Corrective Action Report
CCTV	Closed Circuit Television
CIBSE	Chartered Institute of Building Services Engineers
CMS	Central Management System
COCP	Code of Construction Practice
COMP	Code of Maintenance Practice
Communications Plan	The Plan to be developed in accordance with the Employer's Requirements
COSHH	Control of Substances Hazardous to Health Regulations 1998
DAT	Delivery Acceptance Test
DCCB	Direct Current Circuit Breaker
DDA	Disability Discrimination Act
Developed	The enlarged Kinematic Envelope that takes into account all of the possible effects of

Term	Definition
Kinematic Envelope (DKE)	curvature, including superelevation of the track together with end and centre throw of the Tram. It is speed dependent and unique to a particular location at a given speed (See also Static Envelope, Dynamic Envelope and Kinematic Envelope) (See also RSPG Part 2 Section G – Guidance on Tramways).
DfT	Department for Transport
DMRB	Design Manual for Roads and Bridges
DSD	Drivers Safety Device
Dynamic Envelope	The Static Envelope enlarged to the maximum possible displacement of the Tram in motion on straight track. It takes into account suspension characteristics and allowances for maintenance and wear of Trams. (End and Centre throw is not included.) (See also Static Envelope, Kinematic Envelope and Developed Kinematic Envelope.) (See also RSPG Part 2 Section G – Guidance on Tramways)
EDMS	Electronic Document Management System
EIA	Environmental Impact Assessment
EMC	Electromagnetic Compatibility
EMI	Electromagnetic Interference
EMP	Environmental Management Plan
Enhanced Timetable	The Timetable described at Part 1a with 16 trams per hour Hay to Oct
ES	Environmental Statement
FAT	Factory Acceptance Test
GDPO	Town and Country Planning (General Development Procedure)(Scotland) Order 1992
GPR	Ground penetrating radar
Grandfather Rights	A longstanding right where the original reason and date of the granting of the right is unknown
GSN	Goal Structured Notation
HCI	Human Computer Interface
HF	Human Factors
HLM	High Level Model
HMRI	Her Majesty's Railway Inspectorate (or the appropriate approval regime in force)
HS	Historic Scotland
HSCB	High Speed Circuit Breaker
HVAC	Heating, Ventilating and Air Conditioning
ICP	Independent Competent Person
ISO	International Organisation for Standardisation
ITSO	Integrated Transport Smartcard Organisation - a non profit sharing, member owned organisation supported by the Department for Transport

Term	Definition
ItN	Invitation to Negotiate
JRC	Joint Revenue Committee
Kinematic Envelope (DKE)	The Dynamic Envelope enlarged to allow for the permitted tolerances in track gauge, alignment, level and cross-level and the dynamic and static effects of track wear. It is speed dependant. See also Static Envelope, Dynamic Envelope and Developed Kinematic Envelope. (See also RSPG Part 2 Section G – Guidance on Tramways)
LBC	Listed Building Consent
LHMP	Landscape and Habitat Management Plan
Lifecycle Replacement Plan	The Plan to be developed in accordance with the Employer's Requirements
Line 3	A planned extension of the Edinburgh Tram Network to the south east. Line 3 is not currently being progressed although some safeguarding provisions are required.
LRU	Line Replaceable Unit
LRV	Light Rail Vehicle
Maintainer	Infrastructure and Tram Vehicle maintenance
Markov Analysis	Reliability modelling method
MUDFA	Multi-Utilities Diversion Framework Agreement
MX	Proprietary software used for engineering design
NCR	Non Conformance Report
NR	Network Rail
OEM	Original Equipment Manufacturer
OLE	Overhead Line Equipment
Operational Timetable	The Timetable described at Table 2 – First and Last Trams for the 6 & 6 Tram per Hour Operational Timetable Table 2 – First and Last Tram Times for the 6 & 6 Tram per Hour Operational Timetable - Hay to Oct
ORR	Office of Rail Regulation
ORS	Operational Radio System
OTMR	On Tram Monitoring and Recording
PA	Public Address System
Pan	Pantograph
PCC	Point Control Cabinet
PCS	Point Control System
PHC	Point Heating Cabinet
PHP	Passenger Help Point
PEHP	Passenger Emergency Help Point

Term	Definition
PID	Passenger Information Display
Prior Approval	Written approval by any approving body evidencing prior consent.
QA	Quality Assurance
Quality Management Plan	The Plan to be developed in accordance with the Employer's Requirements
RAMS	Reliability, Availability, Maintainability and Safety
RSPG	Railway Safety Principles and Guidance
RSP2	Ralilway Safety Publication 2 – Guidance on Tramways
RTPI	Real Time Passenger Information
RVAR	Rail Vehicle Accessibility Regulations
Safety Management Plan	The Plan to be developed in accordance with the Employer's Requirements
SAT	System Acceptance Test
SCADA	Supervisory, Control and Data Acquisition
SCC	Supervisory Control and Communications
SCT	Site Commissioning Test
SEPA	Scottish Environment Protection Agency
Shadow Running	Validation of the Operational Timetable without carrying passengers
SIT	System Integration Test
SP	Swept Path
SSSI	Site of Special Scientific Interest
STAG	Scottish Transport Assessment Guidance
Static Envelope	The maximum cross-section of Trams loaded or unloaded at rest on straight and level track, taking account of tolerances in the manufacture of the trams and the effects on the suspension of tram loading and tram loads arising from the wind and other weather. See also Dynamic Envelope, Kinematic Envelope, and Developed Kinematic Envelope. (See also RSPG Part 2 Section G – Guidance on Tramways)
Sub-System	An individual technical element e.g. communications, Tram etc.
SUC	Statutory Utility Company
SUDS	Sustainable Urban Drainage System ('soakaways')
The System	Collectively the technical sub-systems that together form the Edinburgh Tram Network.
System Interface	The interaction point between the sub-systems
Test Plan	The proposals developed by the Infraco for the structured and programmed testing of the components and the System

Term	Definition
Test T1 – T5	Formal Test requirements defined at Tests and Commissioning
TPDS	Tram Position and Detection System
Tramway Path	The area reserved for a moving tram in its environment. (See also RSP2 – Guidance on Tramways)
Transdev	"Transdev Edinburgh Tram Limited" (TETL) the Edinburgh Tram Network Operator
TRO	Traffic Regulation Order
TRY	Test Reference Year
TTRO	Temporary Traffic Regulation Order
TSS	Traction Sub-Station
TSS	Technical Support Services – advisors to **tie**.
TVM	Ticket Vending Machine (see also AFC)
UTC	Urban Traffic Control
UPS	Uninterruptible Power Supply
WBS	Work Breakdown Structure
WEBS	West of Edinburgh Busway Scheme

3.2 Infraco Services

3.3 General

This section provides a summary of the services that shall be required to be undertaken by the Infraco throughout the duration of the Infraco Works, or during particular stages of the Infraco Works, as appropriate.

3.4 Management and Technical Services

3.5 Summary of Deliverables

This section summarises the Deliverables that shall be provided by the Infraco. The Deliverables shall be provided in accordance with the requirements of the Agreement and shall be reviewed in accordance with the Review Procedure.

The Infraco shall complete the Deliverables set out hereunder, in the timescales agreed, and as identified in the Submittal Programme referred to.

In addition to the required Deliverables, this section also develops, where appropriate, the management and technical systems and services that shall be required to be provided by the Infraco to meet these Employer's Requirements. The Infraco shall develop and submit the following Deliverables for approval by **tie** in accordance with the Review Procedure.

Table 20 - Table showing Summary of Deliverables

3.6 Design

3.6.1 General Obligations

The Infraco shall be responsible for the complete design of the Edinburgh Tram Network including the achievement of full compliance with the Employer's Requirements. The Infraco shall be responsible for achieving the following:

- The Deliverables necessary to enable the Edinburgh Tram Network to be procured, constructed, tested, commissioned and brought into commercial service and consistent with the requirements for training and Case for Safety (taking account of the need to fully co-ordinate these activities, including with other physically-related projects, so as to minimise overall disruption) to meet these Employer's Requirements and the Programme.
- The Infraco shall produce a tram service simulation that will demonstrate that its implementation of the design will achieve the required run times, power consumption and service performance where defined in these Employer's Requirements;
- The Infraco shall ensure that the design covers all aspects of the Edinburgh Tram Network and the associated works as defined in these Employer's Requirements;
- The Infraco shall approach the design and technical services in a structured manner using a recognised 'V' life cycle model with regard to the integration of design engineering, systems engineering and safety engineering activities;
- The Infraco shall be responsible for ensuring that there are no gaps and omissions in the specification and design of the Edinburgh Tram Network;
- The Infraco shall demonstrate that the design has properly considered and adopted the most advantageous whole life cost solutions;

3.6.2 Design Approach

The design approach shall be as set out in the SDS Agreement. The Infraco shall:

- Adopt, develop and adapt the SDS Management Plans covering Configuration Management and Verification and Validation.
- Undertake such supplementary safety analysis that will allow further development of the Case for Safety concurrent with any design undertaken to prove that the Edinburgh Tram Network is acceptably safe;

- Where any new technologies are proposed by the Infraco, submit reports and presentations analysing and assessing the options and justifying the final selections of technologies in terms of time, cost, quality, safety, risk and maintainability, for review by **tie**;
- Prepare and maintain the Risk and Hazard Log;
- Prepare and maintain the System Architecture Specification;
- Prepare and maintain the System Design Specification;
- Prepare and maintain the System Design Test Specification;
- Prepare and maintain the Functional Hazard Analysis;
- Prepare and maintain the Detailed Cause Consequence Analysis;
- Prepare and maintain the Requirements Specification / Database;
- Prepare and maintain the Scheme Plan;
- Prepare and maintain the Procurement Plan;
- Prepare and maintain the Interface Schedules;
- Prepare and maintain the Earthing and Bonding Plan;
- Prepare and maintain the detailed drawings and other detailed design documentation;

3.6.3 Transport Modelling

The Infraco shall procure that the SDS provider performs its obligations in respect of

- transport modelling as such obligations are set out in the SDS Agreement.
- detailed traffic junction design recognition and evaluation and wider area effect assessment;
- temporary traffic diversions and support to **tie** where reasonably required in respect of obtaining the Traffic Regulation Order including impact analysis as defined in section 12.12.

For detailed traffic signal modelling; Infraco shall provide adequate modelling upon which to baseits design.

3.6.4 Environmental

All equipment shall meet its required operational functionality in accordance with these Employer's Requirements. The Edinburgh Tram Network and its components shall take cognisance of, inter alia, the following factors: electrical interference, dust, vibration, supply voltage variations, radio signal variations, solar radiation, temperature, humidity, salt, mist, wind, precipitation, snow etc.

Table 21 shows average temperature and humidity conditions for the region. Based on the given information all equipment shall be suitable for a working life as defined in Design Life of these Employer's Requirements under maximum ambient temperature range from – 9° to + 28 ° C, unless otherwise agreed by **tie**.

Edinburgh (eastern Scotland)

	Sunshine (average hours per day)	Temperatures								Precipitation and humidity				Wet days (more than 0.1 mm/0.004 in)	
		Average daily				Highest recorded		Lowest recorded		Relative humidity		Average monthly precipitation			
		minimum		maximum						900	x				
		°C	°F	°C	°F	°C	°F	°C	°F	%		mm	in		
Jan	2	1	34	6	42	14	57	-8	17	84		57	2	17	Jan
Feb	3	1	34	6	43	14	58	-9	15	83		39	2	15	Feb

Dec	1	2	36	7	44	14	58	-7	20	84		57	2	18	Dec

Based on readings for 30 years at 55°55' N, 3°11' W, altitude 134 m/440 ft.

Where equipment is enclosed in equipment housings / enclosures the equipment contained therein shall be capable of operating at an external ambient temperature 15°C higher than the upper limit and at a temperature of 5°C lower than the figures in Table 21 taking into account any heat generated by the equipment.

All equipment housings / enclosures that contain electronic equipment shall be so equipped to minimise the occurrence of condensation within the enclosure.

The following data in Figures 8 & 9 are based on the Edinburgh Test Reference Year (TRY) as given by CIBSE. It is a synthesised weather year based on 20 years of record data. CIBSE recommend that this type of weather data be used for analysing energy use and overall environmental performance.

Temperature

Dry Bulb Temperature	MAX 26.7°C	MIN –10.1°C	MEAN 8.43°C
Wet Bulb Temperature	MAX 18.9°C	MIN –10.7°C	MEAN 6.82°C

Figure 8 - Dry Bulb Temperature Analysis 1: Number of Hours per Year That the Dry Bulb Temperature is Greater Than the Given Value

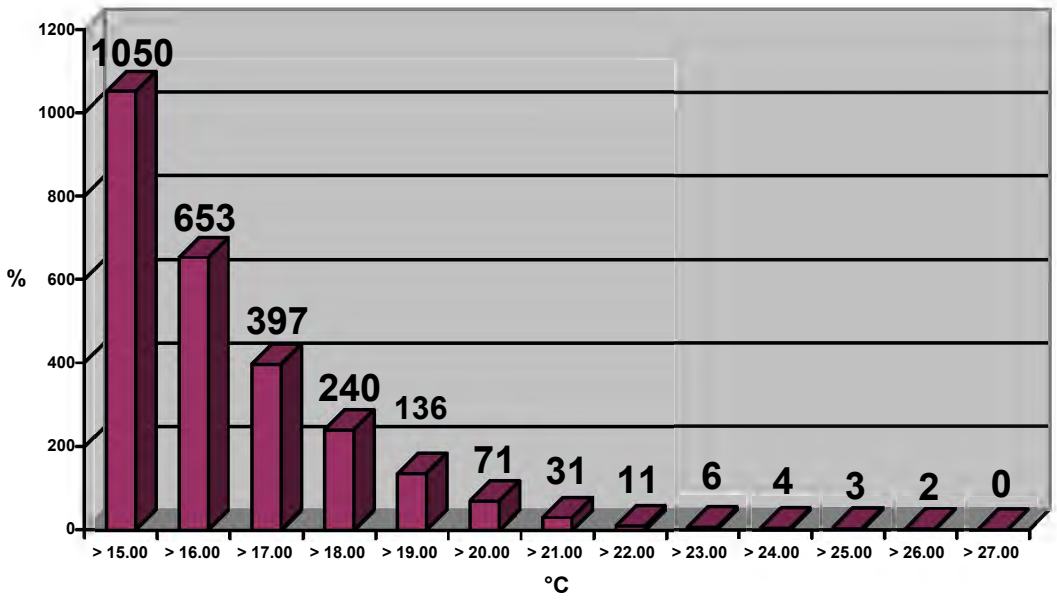

Figure 9 - Dry Bulb Temperature Analysis 2: Number of Hours per Year That the Dry Bulb Temperature is Less Than the Given Value

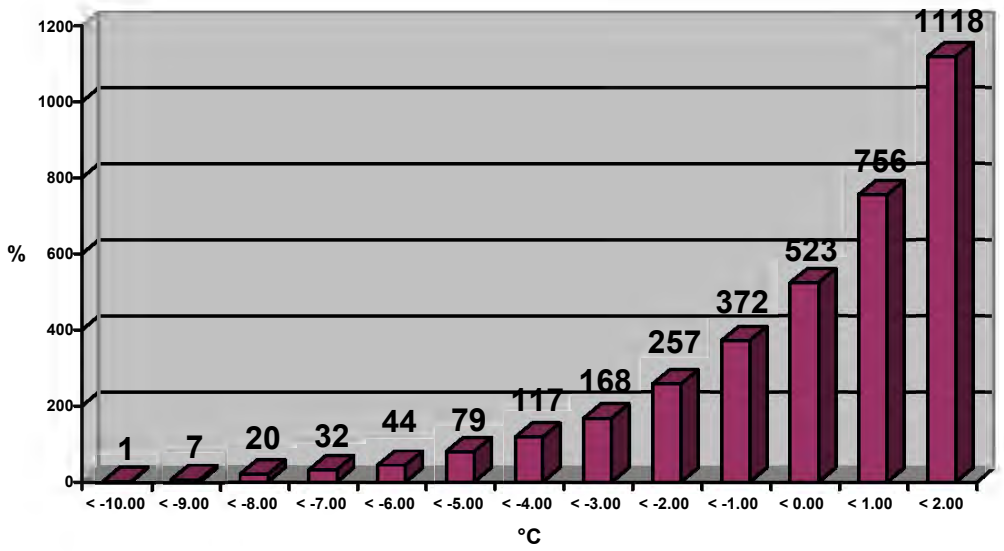

Wind Speed MAX 19.5m/s MIN 0m/s MEAN 4.6m/s

3.7 Construction-related Deliverables (Schedule 3 Requirements)

The following deliverables, from and with regard to *Schedule 3 (Code of Construction Practice and Code of Maintenance Practice)* are highlighted for submission in accordance with the Review Procedure:

- In accordance with Schedule 3 (Code of Construction Practice and Code of Maintenance Practice), the Infraco shall compile a schedule of all buildings, or other structures, which may be at risk of physical damage as a result of the Infraco Works. Furthermore records of the condition and surveys of any defects shall be prepared by the Infraco;

- Under Schedule 3 (Code of Construction Practice and Code of Maintenance Practice) there is a requirement for the Infraco to undertake works to address defects in existing structures, caused by the Infraco Works. Where such work is completed the Infraco shall be required to take appropriate photographs to fully demonstrate the quality of the reinstatement works;

3.8 Construction Advice and Buildability

The Infraco shall be required to develop a =Buildability Report in accordance with the Review Procedure.

The Infraco shall provide a Buildability Report in accordance with the Review Procedure, which shall address the following.

- The Infraco shall propose construction methods which shall be utilised in respect of the Infraco Works. The Infraco shall also advise **tie** on the time and cost implications of any alternative solutions proposed by the Infraco and which have been accepted by **tie**. The Infraco shall initiate the requirements for Temporary Works, and the programme for approvals for such Temporary Works and their execution.

- Notwithstanding the Infraco's obligations with respect to compliance with the third party agreements, the Infraco shall advise **tie** on the potential impact of the Infraco Works upon neighbouring occupiers and users of nearby roads, railways, buildings and airport facilities and the Infraco shall plan the execution of the Infraco Works in such a way as to minimise disruption and prevent nuisance.

- The Infraco shall advise **tie** on the provision and layout of the main site office and local Work Sector / Work Section facilities and services to be provided or secured by the Infraco. **tie**'s requirements for office accommodation at the main site office are expressed in this section.

The Infraco shall prepare, maintain and comply with plans, schedules and drawings that shall show the Infraco's proposals for temporary works, security and fencing arrangements throughout the duration of the Infraco Works ("Temporary Works, Security and Fencing Arrangements Plan").

3.9 Site Support Facilities for tie

The Infraco shall be responsible for the provision, servicing, maintenance and removal of the specified **tie** office accommodation and transport for the use of **tie** officers and staff

The Infraco shall provide and maintain fully serviced office accommodation and furnishings throughout the duration of the Infraco Works, in accordance with the following requirements:

- Office accommodation to accommodate 10 desks (Infraco supply) each with at least one secure lockable drawer, a swivel cloth upholstered chair. ;
- Three separate offices with a minimum working space of 16m^2;
- 2 meeting rooms suitable for sitting up to 20 and 8 people respectively;
- Male and female toilets. Minimum area 3m^2 each;
- Changing/Locker facilities;
- Kitchen facilities;
- Drying facilities;
- Male & Female shower room;
- Parking for up to 15 cars.

The Infraco shall prepare and submit an office layout based on the accommodation description set out below for approval by **tie**.

The Infraco shall integrate this accommodation with the Infraco's own accommodation and, subject to proposals which are acceptable to **tie**, the meeting rooms and welfare facilities may be shared by the Infraco.

3.9.1 Fittings and Furnishings

The Infraco shall also provide the following as minimum requirements:

General Office

- 7 x 4 drawer lockable metal filing cabinets
- 6 wall mounted notice board 1m high 1.5m wide
- 10 waste paper baskets
- 10 telephones connected to 2 lines
- 1 fax machine connected to a separate dedicated line
- 1 high output combined printer and photocopier capable of producing A4 and A3 black and white copies
- 10 connections to internet via broadband, all able to connect at same time
- 1 plan layout table 1 x 2 m
- 1 A0 drawing board and drafting equipment
- 10 desk lamps
- 10 letter tray/ filing baskets
- 2 m of book shelves at 6 of the desks
- 6 large white boards

Meeting Rooms

- Suitably sized tables and the requisite number of chairs for each of the two meeting rooms referred to above.

- 3 flip charts and flip chart paper as required and 1 large wall mounted white board in each meeting room

Changing / drying room

- Lockers c/w locks and keys for 30 people
- 4 chairs
- 30 coat pegs mounted on wall
- 1 boot pull.

General

- A security alarm system
- Access doors, fitted with five lever mortice locks and 6 sets of keys

3.9.2 Services

The Infraco shall provide, install and maintain all the services i.e. Gas, electric, water, drainage, telephone (two lines), broadband etc necessary to ensure effective occupation by **tie** of the accommodation for the duration of the Infraco Works

The Infraco shall provide install and maintain a printer/photocopier capable of producing A4 and A3 size black and white photocopies. The Infraco shall ensure that sufficient stocks of consumables (including paper and toner) are available at all times. Subject to acceptable proposals, the photocopier / fax may be shared by the Infraco and **tie**.

The Infraco shall provide tea, coffee, sugar fresh milk and a supply of drinking water for use by **tie** for the duration of the Infraco Works.

The Infraco shall arrange for the servicing and daily cleaning of the accommodation.

Toilet paper, paper towels, soap, and detergents shall be provided by the Infraco as required.

3.9.3 Equipment

The Infraco shall provide the following equipment for the exclusive use of **tie** throughout the duration of the Infraco Works:

- 10 x 10m long steel tape measures
- 10 x 50m long tape measures
- 10 x high output hand-held torches
- 2 approved electronic utility tracers for tracing/locating cables and pipes
- other consumables as may be required by **tie** (i.e. marker paint etc.).

The Infraco shall provide surveying/setting out equipment to **tie** as reasonably required, in connection with the Infraco Works.

3.9.4 Site Vehicles

The Infraco shall provide, licence, insure (comprehensive for any qualified driver together with any authorised passengers and the carriage of goods or samples), service and maintain four 4 wheeled road vehicles (suitable for the Edinburgh Tram Network) and visitor transport for the exclusive use of **tie**'s representative and staff to enable them to carry out their duties for the duration of the Agreement. The number and type shall be to the specific approval of **tie**.

The vehicles shall be delivered and maintained by the Infraco in good, roadworthy condition.

The Infraco shall provide fuel, oil and maintenance in conformity with the vehicle manufacturers' recommendations and shall clean the vehicles inside and outside as required by **tie**.

A suitable replacement vehicle shall be provided by the Infraco in the event any vehicle being out of service for more than 24 hours.

The Infraco shall ensure that each vehicle shall be fitted with approved warning beacons and any other safety equipment as required for work on roads or within the boundaries of the Edinburgh International Airport.

3.10 Spare Parts, Tools and Test Equipment

The Infraco shall be responsible for the provision, delivery, offloading and placing into stores of the necessary Spares Parts, Tools & Test Equipment.

Detailed requirements and deliverables in respect of the Spares Parts, tools and Test Equipment responsibilities are included in the Agreement.

3.11 Documentation

The Infraco shall be responsible for the provision of all as built / constructed / manufactured drawings, manufacturers information, test certification and other documentation to be provided inaccordance with the Agreement.

Detailed requirements and Deliverables in respect of the documentation responsibilities are included within the Agreement and the Maintenance section of these Employer's Requirements.

3.12 Training

The Infraco shall be responsible for all necessary initial training associated with the operation and maintenance of the Edinburgh Tram Network. Detailed requirements and deliverables in respect of the Training responsibilities are included within Section 40 (*Maintenance*) of these Employer's Requirements.

4 Use of Industry Standard Equipment

The Infraco shall base its system supply on Commercial Off the Shelf (COTS) equipment and software. The use of proprietary equipment and software which is not available on a COTS basis is prohibited unless prior written agreement has been obtained from **tie,** other than that which is specified in the Infraco Proposal.

This is to allow the maintenance, extension and modification of the ETN by third party suppliers and maintainers if necessary.

All electronic interfaces between subsystems shall use open standards and shall utilise non-proprietary protocol.

5 System Identity and Branding

A single system identity shall be applied to the ETN. This shall be developed by **tie** through a specialist contractor appointed by **tie**. The output of this contract with the specialist contractor shall be a documented set of design guidelines which shall be incorporated into these Employer's Requirements as Appendix 1 and which shall be complied with by the Infraco in respect of the Infraco Works. The design guidelines shall include the following elements:

- Logo and other elements of the ETN's graphic identity;
- Signage;
- Application of the systems identity to the following:
  - Ticket machines;
  - Stop furniture;
  - Passenger information;
  - Depot.
- Tram livery;
- Tram interior;
- Uniforms;
- Pictograms;
- Other aspects of the ETN which are visible to the public.

6 Design Life

The equipment and systems to be supplied for the Edinburgh Tram Network shall be designed and built by the Infraco to a standard that shall ensure the System as a whole is capable of continuous operation for a minimum period of 15 years from the Service Commencement Date for each Phase.

Individual items of Infrastructure and equipment shall have a design life as indicated in the table below. Where the design life for an item of equipment is not specified, a minimum of 15 years shall be assumed. All design lives are from the Service Commencement Date for each Phase.

Item of Equipment or System	Design Life
Trams	30 years
Structures	120 years
Track Bed	50 years
Track	25 years
Rails in Straight Lines	20 years
OLE	30 years
Power Cables	30 years
Substations and Substation Equipment	30 years
Tramstop Platforms	50 years
Tramstop Superstructure (including shelters and poles)	25 years
Tram Position and Detection equipment	15 years
Passenger Information Displays	10 years
Telephone Handsets	10 years
Telephone PABX	15 years
Voice recorder	15 years
PA Controller	10 years
Loudspeakers	15 years
Hand Portable Radio Handsets	5 years
Vehicle Mobile Radio Equipment	7 years

Item of Equipment or System	Design Life
Radio Base Station Equipment	15 years
Radio Masts and Antennae	15 years
Passenger Help Points	15 years
CCTV cameras	7 years
CCTV Digital Video Recorders	7 years
SCADA outstations	20 years
Fibre Optic Cabling and Patch Panels	25 years
Fibre Optic Switches, Routers, Hubs	15 years
Other communications equipment	15 years
Cabinets	25 years
UPS systems (excluding batteries)	15 years
Copper Communications Cables	25 years
Batteries (if employed)	4 years
Workstations including Monitors	5 years
Servers	5 years
Standard hand tools	5 years
Portable electrical tools	7 years

Table 22 - Equipment Design Life

7 Extensibility

Table 23 below sets out the assumptions being made in the design of Phase 1a and Phase 1b to allow Phases 2 and 3 to be added with minimum change, and also for future increase in service levels on Phase 1a/1b (over the "8+8" pattern) and for the addition on the proposed Line 3 (assumed routing Bridges-Princes St-Haymarket).

Area	Topic	Phase 1a/1b Design Basis	Provision for Phases 2 and 3	Provision for Phase 1a/1b increased service	Provision for ETL3 (Edinburgh Tram Line 3)	Provisions for other purposes
Track Layout	Roseburn Junction/Delta	Design for full delta	n/a		n/a	n/a
	Balgreen loop and crossover	Design for loop and crossover	n/a		n/a	n/a
	Granton Square	Design for interim terminus	Design for track continuation; build initial as over-run for terminus	n/a	n/a	n/a
	Newhaven	Design for interim terminus	Design for track continuation	n/a	n/a	n/a

Area	Topic	Phase 1a/1b Design Basis	Provision for Phases 2 and 3	Provision for Phase 1a/1b increased service	Provision for ETL3 (Edinburgh Tram Line 3)	Provisions for other purposes
	Ingliston Junction and P&R Tramstop	Make provision for Phase 3 and long-term aspirations	Alignment design not to preclude an allowance terminating Phase 3 service at Ingliston P&R and for East-West continuation from Phase 1	n/a	n/a	n/a
	Track alignment at Princes St/South St Andrew St Junction	Make Provision for Line 3	n/a	n/a	Alignment to allow pointwork and appropriate future traffic management(See CR078)	n/a
Modelling	Network modelling inc. for TSJs	To support 8+8 service	None	None	None	n/a
Traction Power	Traction Power Supply system (Substations/OLE/cabling)	To support 8+8 service +50% addition	Part of basic design	In basic design	Effectively in basic design, as an alternative use of the increased service design provision	n/a

Area	Topic	Phase 1a/1b Design Basis	Provision for Phases 2 and 3	Provision for Phase 1a/1b increased service	Provision for ETL3 (Edinburgh Tram Line 3)	Provisions for other purposes
	Definition of Power characteristics (and other parameters for modelling)	Full traction characteristic of the selected tram	n/a	n/a	n/a	n/a
Depot	Stabling sidings	Design for 35, build for 27	Inc. in 8 extra	Inc. in 8 extra	Not specifically included	n/a
	Workshop	8 Berths theoretical maximum; (practically:4 berths plus 2 service roads)	Initial design would accommodate	Initial design would accommodate	Not specifically included	n/a
	Depot staff accommodation	Numbers to be accommodated nominally match fleet that could be accommodated	Initial design would accommodate	Initial design would accommodate	Not included	n/a
	Depot car parking	See drawings	n/a	n/a	Not included	n/a
	Depot Control Centre	Design for 5 desks; provide 3	Design layout would accommodate	Initial provision would accommodate	Design layout would accommodate	n/a

Area	Topic	Phase 1a/1b Design Basis	Provision for Phases 2 and 3	Provision for Phase 1a/1b increased service	Provision for ETL3 (Edinburgh Tram Line 3)	Provisions for other purposes
	Depot stores	Design basis	Would accommodate	Would accommodate	Not included	n/a
						n/a
SCC	ODN capacity					
	General capacity	There is an initial +50% requirement above the calculated maximum usage	TBA	TBA	TBA	n/a
	Route coding capacity	3-digit route-coding included	Included in base	n/a	Included in base	n/a
	Radio system capacity	A minimum[2] of two channels at each base station	TBA	TBA	TBA	n/a
Roads	Traffic Signalled Junction design and modelling (inc. at temporary termini)	Phase 1a/1b only	Possibly ductwork at temporary termini	n/a	None	n/a

[2] *The word maximum would allow no channels to be provided and still be compliant! Two channels ok as a minimum.*

Area	Topic	Phase 1a/1b Design Basis	Provision for Phases 2 and 3	Provision for Phase 1a/1b increased service	Provision for ETL3 (Edinburgh Tram Line 3)	Provisions for other purposes
	Traffic Management layout at Princes St/South St Andrew St	Phase 1a only	n/a	n/a	None	n/a
	Traffic signalling ductwork	Design basis	n/a	n/a	n/a	Allowance in design at locations where additional signals might be provided
Tramway Ducting	Ductwork and access chambers	A minimum of 20% addition of the number of ducts	Initial design would accommodate	Initial design would accommodate	Initial design would accommodate	n/a
Utilities	Cross-track ducts	Where agreed with the SUCs, provision of secondary spare duct	n/a	n/a	n/a	Provision in design basis

Table 23 - Extensibility Assumptions

8 Standards

8.1 Principles

Where there is no relevant standard specified in the Agreement, the Infraco Works shall comply as a minimum with relevant current British or European Standards, DfT and/or Scottish Government Publications, Standards and Technical Memoranda or IEC/ISO Standards in accordance with the order of precedence set out in section 8.2.

The Infraco Works shall comply with the ORR Safety Publication 2 and with the requirements of HMRI. Where standards do not exist, the Infraco Works shall comply with Good Industry Practice and all relevant codes of practice and guidance notes. Materials or equipment provided shall be in accordance with regulations and standards appropriate to the United Kingdom or the country of manufacture, but only where in the opinion of **tie**, compliance with the regulations and standards appropriate to the country of manufacture ensures an equivalent or higher quality than the regulations and standards appropriate to the United Kingdom. In such situations, the onus will be on the Infraco to prove that they are of an equivalent or higher quality.

Where standards are specified in these Employer's Requirements, these shall include any successor or replacement standards, announced or in force before7 August 2007 and in relation to Tram Supply Obligations and Tram Maintenance Obligations only, 14 September 2007, which provide an equivalent or improved quality and standard.

The Infraco shall comply with standards reasonably required by the relevant Roads Authority, including any local standards and amendments to the Design Manual for Roads and Bridges.

The Infraco shall be responsible for identifying all proposed departures from standards: in these instances, the Infraco shall seek the formal approval of **tie**, and provide all details justifying the departure from standards.

The Infraco shall be responsible for making any necessary applications to the relevant Roads Authority for departure from standards and for complying with the resulting consequences, including those arising from the failure of an application for such departure.

The Infraco shall ensure that all materials, construction and workmanship comprised in the Infraco Works meet the requirements of the British or European standards relevant to the materials used. Materials used should have a British Board of Agrément Certificate wherever reasonably possible which identifies a lifespan for that material.

8.2 Hierarchy of Precedence.

The order of precedence shall be as follows:

1) Legislation;

2) Guidance;

3) Where not included in Guidance;

(i.) British Standards;

(ii.) Scottish Government standards and guidance;

(iii.) Local Authority standards (CEC);

(iv.) Statutory Utility standards;

(v.) International Industry standards.

8.3 The Infraco's Responsibilities

The Infraco in its system integrator role and as the system designer shall be responsible for:

- As appropriate, the development of, and compliance to, robust management processes in respect of compliance with Law and any other relevant standards or regulations included in the Agreement and section 8.2.
- The identification and selection of appropriate standards for all aspects of the Infraco Works
- The identification and definition of any application limits of such standards for all aspects and at all stages of the Infraco Works (such as design, construction, testing and commissioning, operation, and maintenance) in particular at the network, System and subsystem level.
- The identification and successful resolution of any conflicts within and between the obligations contained within this section 8 and Law.

8.3.1 Applicable Standards

Applicable standards are listed in the following table.

Specification No.	Specification Title	Structures	Track	Roads	Power Distr.	Fare Collection	OLE	SC & C	Tramstops	Depot	Trams
BS 8500 – 1: 2002	Concrete – Complementary British Standard to BS EN 206-1. Method for specifying and guidance for specifier	x	x	x			x		x	x	
BS 8500 – 2: 2002	Concrete – Complementary British Standard to BS EN 206-1. Specification for constituents material and concrete	x	x	x			x		x	x	
BRE Special Digest Nr 1	Concrete in aggressive ground.	x	x	x			x		x	x	
BS 4449: 1997	Specification for carbon steel bars for reinforcement of concrete	x	x	x			x		x	x	
BS 6744: 2001	Stainless steel bars for the reinforcement and use in concrete – Requirements and test methods	x	x	x			x		x	x

Table 24 - Applicable Standards

9 Geotechnical

Where the Infraco Works may affect geotechnical and geo-environmental features, including but not limited to, aquifers, ground water and surface watercourses, the Infraco shall comply with the requirements of relevant third parties, the Scottish Environment Protection Agency (SEPA) or other statutory consultees and environmental legislation.

The Infraco shall agree the criteria and methods for the identification, classification, treatment and disposal of material with SEPA, the relevant local environmental health authority or other relevant authority as appropriate. The Infraco shall obtain all necessary consents for the removal, disposal or re-use of materials. Materials not suitable for re-use shall be transported off Site to a licensed facility in accordance with the requirements of the applicable relevant authority and environmental legislation.

The Infraco shall not carry out works or activities which would result in any Site or any land licensed to the Infraco under the Agreement or any adjacent or adjoining property being classified as contaminated land under the Environmental Protection Act 1990, the Contaminated Land (Scotland) Regulations 2000, the Contaminated Land (Scotland) Regulations 2005 and the guidance contained in the Scottish Executive Statutory Guidance for the the Contaminated Land Regime, Edition 2 dated May 2006 and/or any similar environmental legislation, or that would preclude such a classification being removed.

The Infraco shall assess the risk of the ingress of landfill gases, coalfield gases and other hazardous ground gases and implement appropriate measures to mitigate such risks.

The Infraco Works shall be designed and constructed to accommodate reasonably foreseeable changes in the existing and potential future nature and level of ground water, where reasonably practicable.

10 Environment

10.1 Environmental Considerations

10.1.1 General

Environmental Statements have been prepared for Line One and Line Two in accordance with the standing orders of the Scottish Parliament, which require that projects approved by private Act of Parliament must be subject to Environmental Impact Assessment (EIA). EIA in Scotland is governed by the Environmental Impact Assessment (Scotland) Regulations 1999 (S.I. 1999 No. 1). The Environmental Impact Assessments (EIAs) have been undertaken to identify the construction and operational effects of building and operating a tram network in Edinburgh. Each assessment has been documented in a comprehensive Environmental Statement which describes:

- The design of the project and the way it will be constructed and operated;
- Its impacts on the physical, natural and human environment; and
- The measures that will be undertaken to minimise these impacts.

The Environmental Statements report the assessment of the following environmental topics which should be considered by the Infraco:

- The proposed scheme – including an explanation of the need for the scheme, alternatives considered, route alignment and infrastructure description, construction and operational activities;
- Approach to the EIA – summarising the legal requirements, scope and methods used in undertaking this EIA;
- Policy context – provides a review of compliance of Line One and Line Two to relevant national, regional and local policies;
- Traffic and transport;
- Land use - including potential impacts to the agricultural use of land along the route;
- Geology, soils and contamination – including references to hydrogeology and waste management;

- Landscape and visual amenity;
- Ecology and nature conservation;
- Surface water – including water quality and hydrology;
- Heritage - including archaeology;
- Socio-economic effects;
- Noise and vibration;
- Air quality - including local air quality (PM10, NO2), global air quality (CO2) and dust; and
- Cumulative impacts.

The Infraco shall ensure that the environmental impact caused by the Infraco Works shall be no worse than that contained in the Environmental Statements.

10.1.2 Freedom of Access to Environmental Information

The attention of the Infraco is drawn to the requirements of the Environmental Information (Scotland) Regulations 2004 (SSI 2004/520). This Statute permits public access to environmental information held by a Scottish public authority.

10.1.3 Relevant Legislation, Regulations and Guidance

The following are a series of project specific documentation governing various aspects of the environmental considerations of the Edinburgh Tram Network design, construction and operation.

10.1.4 Code of Construction Practice

A code of construction practice was prepared in consultation with the City of Edinburgh Council (CEC), Scottish Natural Heritage (SNH), the Scottish Environmental Protection Agency (SEPA) and Historic Scotland, in order to define **tie's** minimum standards of construction practice. Compliance with this code is a legal requirement of the Edinburgh Tram (Line One) and (Line Two) Acts (2006) under Section 66 and this code has been developed by **tie** and this developed version is included in Schedule 3 (Code of Construction Practice and Code of Maintenance Practice).

The Code of Construction Practice sets out policies, legislation and guidance relating to the impact of the proposed construction works on the environment and the amenity and safety of residents, businesses, the general public and the physical surroundings adjacent to the ETN. The Code of Construction Practice also provides a list of environmental protection measures to be implemented during the construction of the ETN.

10.1.5 tie's Noise and Vibration Policy

tie's Noise and Vibration Policy (NVP/001 V1.01) sets out the mitigation approach for noise and vibration impacts during the operation of the Tram in Edinburgh. Mitigation requirements relating to noise and vibration impacts during the construction of the ETN route are outlined in the Code of Construction Practice. Compliance with the Noise and Vibration Policy is a legal requirement under Section 66 of the Edinburgh Tram (Line One) and (Line Two) Acts (2006). Other legal requirements relating to noise insulation are set out in Sections 63, 64 and 65 of the respective Acts. The Noise and Vibration Policy is included in Schedule 32 (**tie** and CEC Policies).

10.1.6 The Tram Design Manual and Urban Design Briefs

A Design Manual and urban design briefs have been prepared for the ETN. Both sets are regarded as supplemental guides to deemed consent for Line One and Line Two under the section 11 (Class 29) of the General Permitted Development (Scotland) Order 1992.

Although permitted development status exists for the ETN it is nonetheless necessary to gain prior approval from the City of Edinburgh Council before the Infraco Works can commence. The Design Manual and urban design briefs are both designed as guides in informing both the design process and the prior approval process. It is therefore important that the Infraco gives appropriate consideration to the contents of the Design Manual and the briefs as major component in the integration of a tram design into the urban fabric of the City.

10.1.7 Landscape and Habitat Management Plan

The Landscape and Habitat Management Plan (LHMP) details the proposals for retention, protection and enhancement of existing planting and habitats, within the Roseburn Corridor. It also sets out details of replacement planting and habitat which are lost as a consequence of the development. The plan will be updated by the Infraco as new information on habitat, landscape proposals and Tram design becomes available. The plan will also include proposals for noise mitigation for properties adjacent to the ETN. Revisions to the LHMP will require to be approved by the City of Edinburgh Council Planning Authority. The procedure for updating the LHMP is set out within Section 68 of the Edinburgh Tram (Line One) Act (2006).

10.1.8 Badger Mitigation Plan

The Badger Mitigation Plan sets out the scope and form of the proposed mitigation measures for avoiding/ reducing adverse impacts on badgers within the Roseburn Corridor. The Plan will be updated by the Infraco as new information on badger social groups and the ETN design becomes available. Revisions to this Plan will be agreed with SNH, CEC and the Edinburgh and Lothians Badger Group (ELBG) and approved by the CEC Planning Authority.

In preparing the detailed environmental design and implementation (including maintenance and monitoring periods) proposals for landscape and ecology the Infraco will ensure that all commitments given in the Environmental Statement and arising from the Scottish parliamentary process relating to the Tram Legislation (including the detailed agreements following discussions with stakeholders) are met.

10.1.9 Protected Species Plan

The Protected Species Plan identifies the constraints governing how all protected species (predominantly located in the Gogarburn area) are to be dealt with.

10.1.10 Archaeological Requirements

All Infraco Works are to be carried out in compliance with the approved AHMP relevant to that location.

10.1.11 Landscape Design

The landscape design shall include, for construction, aftercare and maintenance / monitoring, ongoing for the whole Term. The detailed landscape design shall be in accordance with the environmental objectives, principles and requirements given in the Environmental Statements, to ensure that the Edinburgh Tram Network as constructed and operated is in compliance with the Environmental Statements, and any subsequent side agreements entered into between the CEC, **tie** and various third parties.

10.2 Ecological Design

The ecological design shall include, for construction, aftercare maintenance and monitoring:, the ecological mitigation proposals will cover the wholeTerm.

The ecological design shall be in accordance with the environmental objectives, principles and requirements given in the Environmental Statements, to ensure that the Edinburgh Tram Network as constructed and operated is in compliance with the Environmental Statements prepared for Parliament, and any subsequent side agreements entered into between the CEC, **tie** and various third parties (e.g. Scottish Natural Heritage, New Ingliston Limited, Edinburgh and Lothian Badger Group).

The updated and ongoing ecological surveys and mitigation works to be carried out by Infraco shall take into account seasonal constraints and variations and will accommodate ongoing relevant surveys begun by other parties (e.g. biological water quality monitoring). The Infraco shall ensure that the construction, maintenance and monitoring of the Infraco Works complies with all existing UK and EU Environmental legislation concerned with the protection of species and habitats including but not limited to:

- Wildlife and Countryside Act 1981 (as amended in particular by Variation of Schedules 1988, 1992 & 1998);
- The Conservation (Natural Habitats, & c.) Regulations 1994 (as amended);
- Protection of Badgers Act 1992; and
- Countryside and Rights of Way Act 2000 in so far as it extends to Scotland.

The Infraco shall not commence works within any part of the Site until the necessary update surveys of ecological interest in respect of that part of the Site have been undertaken and a survey report has been submitted to **tie**. Any relevant findings of such surveys shall be included into the Infraco's Landscape and Habitat Management Plan and the Construction Environmental Management Plan (CEMP).

The Infraco shall ensure that:

- Details of all species protected by Law and any structure or place used for shelter or protection by any such species protected by Law within the Site are kept confidential and not disclosed to any person except insofar as is essential for carrying out the Infraco Works; and

- All necessary current licenses, and named license holders, are available before the commencement of any Infraco Works, which may affect species protected by Law and or any structure or place used for shelter or protection by any such species protected by Law.

In the event that the Infraco identifies or becomes aware of any species protected by Law, or any structure or place used for shelter or protection by any species also protected by Law, which could be directly or indirectly affected by the Infraco Works and for which appropriate protection measures have not previously been agreed, the Infraco shall notify **tie** immediately and shall:

- Cease all Infraco Works that may adversely affect such species, structure or place;

- Provide Scottish Natural Heritage and **tie** with any further information of which the Infraco is aware relating to such species, structure or place as may be requested;

- Consult upon and agree mitigation and/or monitoring measures with Scottish Natural Heritage and **tie** in relation to such species, structure or place; and

- Obtain any necessary licenses to carry out the agreed measures.

The Infraco shall ensure that all construction work is carried out with due regard to the seasonal interests of any flora, fauna or habitat and in particular, all species listed for any degree of protection under Law. The Infraco shall make due allowance for the seasonal constraints in preparing the Programme.

10.3 Construction of Ecological Measures

10.3.1 General

Special ecological measures shall include but not be limited to the requirements for carrying out the Infraco Works:

- fencing;
- safe passage for wildlife;
- the location of nesting or roosting boxes;
- the location of habitat creation measures to be inspected;
- the known location of protected species, and
- the list of licenses obtained or required for working with or within the vicinity of Protected Species; and
- maintaining access to foraging and water.

10.3.2 Site Supervision of Landscape and Ecological Works

The Infraco shall ensure that the environmental Site works shall be inspected and monitored by Infraco's environmental clerk of works who will be supported by Infraco's landscape architect and ecologist, as necessary.

10.3.3 Landscape Works

Planting, seeding and aftercare works shall be carried out by the Infraco.

The Infraco will be responsible for locating all services routes prior to any landscape work being carried out.

10.3.4 Completion of the Planting Works and Completion of the Landscape and Ecological Aftercare Works

On practical completion of the landscape and ecological implementation works and on completion of the three years landscape and ecological aftercare works. The Infraco shall submit the required certificates and arrange a formal inspection of the Infraco Works with **tie**.

A separate inspection shall be arranged with relevant landowners for any areas of off-site planting.

10.3.5 Construction Environmental Management Plan (CEMP)

The Infraco shall prepare a Construction Environmental Management Plan (CEMP) including specific management / action plans or Method Statements, as necessary, to convey the required level of information for the following:

- Drainage features, including oil interceptors and pollution control valves, treatment of run-off, (including run-off volumes) and the location and appearance of any balancing ponds and/or swales, access or proposed access to the same;
- Carriageway surfacing;
- Working times;
- Noise reduction and abatement;
- Pollution control and contingency plan (see below);
- Discharge, land drainage and abstraction licenses to comply with EA requirements;
- Protection of retained vegetation;
- Maintenance e.g. de-icing;
- Sourcing of construction materials;

- Waste disposal, including disposal of construction waste, arisings, spoil, miscellaneous solids and liquids;
- Topsoil and subsoil handling (strip, storage, amelioration and re-use);
- Management and disposal of any excess soil or spoil arising from the works; and
- Site compounds.

The specific requirements of the pollution control and contingency plan are as follows:

- Compliance with the SEPA pollution prevention guidance;
- Identification and categorisation of surface waters vulnerable to Site works and an assessment of the earthworks that are likely to give rise to silty run off, the routes this is likely to take and the methods to prevent damage from silt;
- Precautions for handling of fuel, oil and other liquids during the works, in particular, near rivers, streams and watercourses;
- Requirements for pollution control equipment;
- How mud and dust will be controlled;
- How water supply boreholes and wells will be protected;
- The measures to be taken to protect watercourses and associated wildlife from, for example, chemical spillages or the introduction of sediment-laden run off; and
- Discharge criteria for suspended solids in run off from the Site during construction and proposals for monitoring and control.

11 Surveys

Surveys and investigations shall be undertaken by the Infraco as required to facilitate the design, construction and maintenance of the Edinburgh Tram Network.

Before commencing any Infraco Works (including investigations) where either the Infraco or **tie** considers there to be potential for a future claim from adjacent property owners or occupiers, the Infraco shall carry out a detailed condition inspection of the relevant properties and infrastructure which may be affected by the Infraco Works. If any such inspection is carried out, this shall be done in conjunction with the owners or occupiers concerned. A condition survey report shall then be prepared and agreed with the owner or occupier.

Condition survey reports prepared under the preceding paragraph shall include photographic evidence of the existing condition of the relevant property or infrastructure including evidence of critical dimensions such as existing crack widths.

The Infraco shall undertake sufficient surveys to prepare a topographical survey model. Relevant sections of the topographical survey model shall be updated by the Infraco at least every six months throughout the period of the Infraco Works, where work has been undertaken in relation to the sections concerned.

The topographical survey model shall include all Works as constructed and the Infraco shall include in each updated topographical survey model all then existing fixtures including:

- principal cabling;
- street furniture;
- structures and buildings;
- trackwork;
- drainage;
- power supply systems including OLE structures;
- ducting and draw pits.

These surveys shall include aspects concerned with:

- dimensions
- condition; and
- inspection for assessment.

The Infraco shall update the photographic records (excluding aerial photographs) and other such data contained in the topographical survey model at intervals of not less than six months.

The Infraco shall provide access to and copies of, when requested, all reports of investigations carried out as part of the Infraco Works.

12 Project Management Processes

12.1 Communication – General

The Infraco shall develop and maintain a "Communications Plan" and this shall be submitted to **tie** in accordance with the Review Procedure.

The Communications Plan shall illustrate how all the communication processes, activities and issues are to be managed, progressed and satisfactorily resolved. The Communications Plan shall detail how the Infraco will communicate with Sub-Contractors, the Operator, **tie**, the MUDFA Contractor, key stakeholders and third parties. The Communications Plan shall also include the intended processes for dealing with enquiries, particularly complaints, from all sources. The Infraco shall refer to the Stakeholder Services in this Section of the Employer's Requirements, in order to ensure that the Communications Plan includes all necessary requirements.

The Infraco shall implement all the requirements of the Communications Plan.

The Infraco shall liaise with the relevant parties to ensure that the Infraco is copied into all relevant communications that are generated by others, in order to ensure that any relevant construction related issues, such as Temporary Works and practical constraints, are identified and addressed.

12.1.1 Meetings

The Infraco shall work with **tie** to develop the meetings schedules and requirements for progress reporting throughout the duration of the Infraco Works. The following table provides an outline of the minimum requirements:

Meetings	Frequency	Chaired by / Minutes taken
Safety Meeting	Weekly	Infraco
Management Review Meetings	Two monthly	**tie**/Infraco alternately
Project Progress Meetings	Four weekly (Fortnightly prior to Site start)	**tie**

Meetings	Frequency	Chaired by / Minutes taken
Design and Planning Meetings	Fortnightly	Infraco
Stakeholder & Third Party Meetings	As required	**tie**
Site Meetings	Weekly	Infraco
Cost Review Meetings	Four weekly	**tie**
Risk Review Meetings	Four weekly	**tie**

Table 25 - Table showing meeting schedules

The primary purpose of these meetings shall be to enable the Infraco to advise on:

- Any safety issues;
- The current state of the programmed Infraco Works;
- Progress made in the various activities;
- Communication issues;
- Third party issues; and
- Commercial issues (Including change control).

The Infraco shall develop and maintain a comprehensive meetings schedule indicating those meetings which the Infraco shall chair and those meetings which the Infraco shall attend.

Prior to commencement on Site, progress meetings shall be held every two weeks. The purpose of these meetings shall be to review progress made by both Parties, and identify and agree actions required.

The Infraco shall provide an agenda, for all meetings to which they are designated as chair. The Infraco shall also provide appropriate documentation in advance of each of the meetings, as defined in the following sections, or otherwise as agreed with **tie**.

12.1.2 Progress Reporting

Progress reports shall be submitted by the Infraco to **tie** no later than three Business Days before each progress meeting.

The Infraco's progress reports shall contain comprehensive information and shall be structured in a manner which is commensurate with **tie**'s own reporting structure. The various sections of the progress reports shall require to be agreed with **tie**, but should include the following:

1. Executive Summary;
2. Health & Safety Report;
3. Quality & Environment;
4. Financial Summary Report; and
5. Project Performance / Programme.

Information provided within the progress reports shall include, but not be limited to, the following:

- Health & safety report including a summary of H&S records
- Summary financial information summarised from the separate cost report including summary and headline data on planned spend/actual spend, forecast spend and summary of costs for Compensation Events and future forecast.
- Planned versus actual resource summary;
- Physical progress against Milestones anticipated/required completion dates;

- Four weekly forecast of all activities;
- Eight weekly critical impact notice (including all information on any internal or external factor which may affect programme delivery);
- Labour histograms detailing planned, actual and forecast across all disciplines;
- The activities commenced or completed since the previous report and upon what dates;
- The expected remaining duration of all activities commenced but not completed;
- Any other additional activities with expected durations, methods, and resource requirements and sequence assumptions;
- Schedule and programme for the delivery of method statements, permits and isolations for the next four weeks;
- Any changes to expected durations, method, resource requirements and sequence assumptions;
- Forecast completion dates for all Infraco Works in each geographical section and intermediate geographical section including any slippage or advance upon the Planned Service Commencement Date and/or the Planned Sectional Completion Dates (as appropriate);
- Programme comparison between actual vs. planned;
- Schedule of information received;
- Schedule of outstanding information;
- Progress photographs;
- Top 10 opportunities; and
- Top 10 risks.

12.1.3 Progress Photos

The Infraco shall on a monthly basis throughout the period until the Service Commencement Date procure that photographs covering all of the Infraco Works are taken by a professional photographer whose appointment the Project shall be approved by **tie**, such approval not to be unreasonably withheld or delayed.

tie shall determine the scope of the photographs referred above.

The Infraco shall ensure that:

- A minimum of 50 digital colour photographs shall be taken on a monthly basis;
- All photos shall be provided in electronic format in a form to be agreed with **tie**;
- One set of 10 inch x 8 inch size prints shall be prepared from the colour photographs referred to above;
- All prints referred to above shall be presented in albums with individual clear plastic wallets and marked on the reverse side with the date that the photograph was taken, the name and address of the photographer, identification reference number and a brief description of Work being undertaken and the direction from which the photograph was taken;
- All prints and negatives shall be delivered to **tie** within two weeks of being taken; and
- Except where **tie** have provided their prior written consent, the photographs shall not be used for any purpose other than as set out in the Agreement.

The Infraco shall procure that all Intellectual Property in respect of the photographs vests in **tie**.

12.1.4 Site Meeting Report

A report shall be submitted by the Infraco to **tie** no later than one Business Day before each site meeting. The report shall include reference to any significant issues (associated with safety, programme, design, cost, planning and consultee aspects), which have arisen since the previous monthly progress report.

The site meeting report shall also identify actual manpower resources (labour returns), plant and equipment that have occurred on site, for the previous week.

12.1.5 Topic Register

It is **tie**'s intention to continue to develop and maintain a "Topics Register" for the Infraco Works. The Topics Register is used to record all issues as they arise that require to be specifically addressed. The record is then amended as appropriate to track the manner in which issues have been progressed or resolved to the satisfaction of **tie**. The Infraco is required to add to, or respond to issues as appropriate and attend regular review meetings at which the Topics Register shall be updated and actions assigned by **tie**.

The Infraco shall participate in the management of the Topics Register.

12.1.6 Work Breakdown Structure

An agreed Work Breakdown Structure is included in the Introduction of these Employer's Requirements. The Infraco shall adopt this WBS to ensure a recognised, structured analysis, by all parties, when interrogating the programme and cost analysis. The WBS may be further developed by the Infraco with the written consent of **tie**.

Accordingly there shall be a requirement for the Infraco to adopt all aspects of the WBS in the development of programme and cost documentation.

12.2 Programme Management

The Infraco shall undertake programme management including the implementation, regular updating and management of a fully detailed comprehensive Programme illustrating how the Infraco proposes to execute the whole of the Infraco Works in compliance with the Project Programme.

This Infraco Programme shall be prepared using Primavera software in a version compatible with that of **tie**.

This Programme shall be in Primavera P3e (Version 6 or otherwise as agreed with **tie**) format and accompanied by a time chainage programme illustrating the same information. The Programme shall be cost and resource loaded and coded to reflect the Infraco's WBS activities as detailed in section 39 of these Employer's Requirements.

The Infraco shall be responsible for liaising directly with **tie**, CEC (and other appropriate third parties) to maximise delivery of the ETN but minimise disruption to public transport and other services, and ensuring that any necessary diversion routes are agreed in recognised time periods prior to the commencement of Infraco works. The Infraco shall also take note of the constraints as identified in 39 of these Employer's Requirements.

The Programme shall be submitted to **tie** in accordance with the Review Procedure within a period which shall ensure that the Infraco Works can be progressed and monitored by the Infraco and **tie** against the details contained therein. The Programme shall clearly identify the following:

- the commencement, construction and completion constraints for all elements of the Infraco Works, separated into sectors by WBS code;
- all Milestones;
- the constraints, procedures, documentation and approvals specified in the Agreement;
- the Infraco manufacture and construction execution strategy, Infraco Works and site testing and commissioning, all constraints, procedures, documentation and approvals periods;
- seasonal constraints and constraints applied by CEC and other third party and statutory bodies as defined in the Agreement;
- the required design approvals and notices;
- all works to be undertaken by any Sub-Contractor;
- sufficient detail to illustrate the integration of the Deliverables with the proposed dates of possessions and the commencement and completion of construction for all elements of the Infraco Works, by WBS code;
- all other projects affecting the Infraco Works and how they are integrated into the Infraco Works. For example, any street works to be carried out by CEC, and works by or on behalf of all third parties (including landowners and developers);

- any witnessing, inspections, testing etc of the Infraco Works which requires to be carried out by third parties;
- long lead time materials and works;
- the identification and duration of all advance works, other than those already underway;
- the requirements and approval periods for traffic management, TROs, TTROs, and including any third party's requirements for notices and road closures;
- the commencement, completion dates and relationships of intermediate geographical section of the Infraco Works within each geographical section of the Infraco Works;
- the links and relationships between all activities and the justification of the underpinning logic;
- all design, manufacture and construction periods;
- the identification and timing of inputs and approvals required from **tie**, third parties, and any Approval Bodies are clearly identified; and
- the interface and relationship with the MUDFA Works;

The Programme shall meet the following minimum requirements:

- shall be in Primavera P3e (Version 6) for detailed implementation;
- shall follow and fully reflect the **tie**'s Work Breakdown Structure ("WBS") included within these Employer's Requirements.
- shall be cost and resource loaded down to coded activities;
- all resource reporting and progress reporting shall be coded to suit the activities contained within the WBS;
- records of time spent against activities shall be completed weekly against planned works as generated by Primavera;

- Any deviations shall be reported in the progress report and include notification of remedial actions for authorisation by **tie**;
- weekly records shall be collated and delivered to **tie** by 09:00hrs on the Tuesday following the week to which the records relate;
- the Programme shall also take into account programming input and attendance at meetings, both as required by **tie**; and
- the Programme shall also contain cost/spend tables and cumulative curves to match the achievement of major milestones and activities within the WBS.

The Infraco shall take into account the availability of alternative materials or components when developing the Programme. The Infraco shall identify those materials and components which require advance ordering and processing. Any advanced orders which are approved shall be identified and defined in the Programme.

The Infraco shall update the Programme every four weeks in line with **tie** reporting periods to take full account of the Infraco progress in completing the Infraco Works.

A hard and soft copy updated Programme and an Infraco Progress Report shall be submitted by the Infraco to **tie** no later than three Business Days before each four weekly progress meeting.

12.3 Time Chainage

The Infraco shall also produce, manage, develop and work in accordance with its Time Chainage Diagram.

The Time Chainage Diagram shall be submitted to **tie** in accordance with the Review Procedure to ensure that the Infraco Works can be progressed and monitored by the Infraco against the details contained therein but in any case, the Time Chainage Diagram shall be submitted not later than six weeks after the Commencement Date. The Time Chainage Diagram shall be updated regularly and be available for inspection or distribution on a monthly basis, during the course of the Infraco Works.

The Time Chainage Diagram shall fully reflect, accommodate and comply with the information detailed on the Programme.

12.4 Planning and Other Consents

The responsibility for the Consents is as set out in Clause 19 of the Agreement.

12.5 Project Management Plan

12.5.1 General

The Infraco shall submit and maintain a plan describing the approach to project management for the delivery of the complete scope of the Infraco Works. This project management plan shall include sections to clearly and separately describe the approach to the specific topics set out below.

12.5.2 Resource and Competence

A description of the procedures employed to ensure that the required resource and competence level throughout the duration of the Infraco Works shall be achieved.

12.5.3 Documentation

Identify key policies and procedures to deliver such works, infrastructure and equipment to programme, specification, budget and otherwise safely and efficiently and in a manner which is fully integrated with the activities of other relevant contractors.

The approach to the development of a suite of project specific documentation, indicating how they shall effectively be integrated with, and reflect, the Infraco's corporate procedures and policies (including any Joint venture or consortia procedures).

Templates that shall be used for the procurement and delivery of the service deliverables, which shall be required to be prepared by the Infraco.

Outline proposals covering the suite of required documentation including training, maintenance and operations manuals, as-built drawings, design Information, testing procedures and proposals, and certification and records (e.g. testing).

12.5.4 Regulations

Management arrangements and procedures for ensuring/monitoring compliance with all applicable Regulations (e.g. HMRI), Law, and the requirements of the Agreement and its Schedules.

12.5.5 Procedures

Details of internal procedures for decision making and review in your management team with particular emphasis on safety, programme, budget, quality, the management and control of non-compliance and the implementation of continuous improvement.

12.5.6 Proposals on reporting and controlling design information requirements

Procedures which shall be followed in obtaining outstanding consents and approvals for the works.

Definition of the process for managing the approvals interface with **tie**, HMRI, Planning Authority, Roads Authority, Network Rail, the Operator and third parties with whom agreements have been entered into.

12.5.7 Interface Plans

Given that successful co-operation between the Operator, Infraco, and **tie** is essential to the delivery of a successful project, a description of the key areas of this interface and details which demonstrate how this is successfully achieved.

Details of supply chain process/procedures, in particular provide details of the criteria for selection of sub-contractors/suppliers for this project.

Details of how the Tram Provider shall be managed.

Details regarding the commissioning and handover of the Edinburgh Tram Network or Geographical Sections thereof to the Operator shall be provided.

12.5.8 Design

Clear definition of the areas where the Infraco shall undertake design work and an explanation of where the Infraco believes this deviates from the previous design work done.

12.6 Construction Management Plan

The Infraco shall submit and maintain a Construction Plan relating to the Programme. This Construction Plan shall include sections to clearly and separately describe the approach to the specific topics set out below.

12.6.1 Mobilisation

Detailed mobilisation plan, to incorporate comprehensive details of all aspects of mobilisation including, but not limited to, number of work sites, the facilities on each, a general arrangement drawing of main sites, lay down areas, materials storage, welfare and car parking. This should detail timescales and immediate resource availability and should also provide details of the permissions required and assumptions made.

12.6.2 Plant

A description of the plant that will be used for the construction of the project and of how long the plant will be used. This should include description in relation to plant used for specialist purposes such as rail laying or wire stringing (these should be separately identified).

12.6.3 Sub-Contractors

Details of the sub-contractor management and control process during the construction phase, including how the performance of sub-contractors will be measured and reviewed and how sub-contractor compliance with standards will be assured.

12.6.4 Method Statements

A description of the process by which method statements shall be developed and approved, and a schedule summarising those method statements that are anticipated. An initial schedule shall be submitted in accordance with the Review Procedure and this shall be updated from time to time with agreement from **tie**.

12.6.5 Avoidance of Disruption

Description of the management process for ensuring that traffic disruption is kept to a minimum, particularly in relation to Traffic Management and TTRO requirements. Details of procedures of how unforeseen works (that are out with the area covered by the Temporary Traffic Restriction Order, but are necessary to complete the Infraco Works within the TTRO area) shall be dealt with.

Proposals for maintaining reasonable access to premises at all times and what measures The Infraco might employ when access is denied taking into account the requirements of the Disability Discrimination Act 1995.

Details of how it is proposed to liaise with all potentially affected third parties, and an assessment of the likely identities of such parties.

12.7 Network Rail Interface Plan

The Infraco shall submit and maintain a plan describing the approach to managing the ongoing interface requirements with Network Rail. The plan should identify the critical activities and the key risks associated with this interface and proposals to mitigate these risks. Notwithstanding the Infraco's responsibility of complying with the Agreement (including compliance with the Third Party Agreement and the Asset Protection Agreement) the Plan should address the following issues.

- A description of procedures for gaining access to Network Rail's infrastructure both in terms of the approval process and the physical access proposals;
- Confirmation, in terms of safety and in terms of undertaking the Infraco Works, the personnel utilised shall be appropriately qualified, skilled, experienced and adequate in quantity;
- The proposed Possession Strategy for works on or adjacent to Network Rail infrastructure, to include identification of Possessions & Isolations on Programme taking cognisance of lead time;
- Summary of the required method statements for principal construction activities associated with Works adjacent to Network Rail infrastructure;
- The proposals which allow access for Network Rail to maintain their infrastructure;
- Details as to how the Railway Group & Network Rail Line standards shall be complied with;
- Specific details of how Network Rail's infrastructure and rail vehicles shall be protected from injury/damage arising from the works activities;
- Details of how staff and any third parties shall be protected from injury from Network Rail's infrastructure or vehicles using it;
- The strategy for Red & Green Zone working;

- Proposals for competencies, making specific reference to management of the certification of personnel and operatives in accordance with the National Competency Control Agency "Sentinel" systems and procedures;

- A specific accident/incident procedure with regard to Network Rail infrastructure which details action to be taken, including the communications regime;

- Proposals for security and prevention of trespass onto site, especially onto adjacent Network Rail property;

- Proposals with regard to work in and around First Scotrail's Haymarket Depot and its associated stabling & sidings. There shall be a requirement to highlight proposals for ensuring access to Haymarket Depot is maintained for staff; road and rail vehicles, especially if rail vehicles require access/egress to the depot by road. There shall be a requirement to identify how First ScotRail operations shall not be restricted.

12.8 Quality Management

The Infraco shall undertake the Works fully in compliance with quality management processes and procedures referenced in ISO 9001 and ISO 9004.

The Infraco shall develop and maintain a Quality Plan to meet the requirements of ISO 10005 - 1995, and which fully defines all quality aspects of the Works. The Quality Plan shall be submitted in accordance with the Review Procedure. The Quality Plan shall demonstrate an integrated quality management system relating to the design, construction, testing and commissioning of the system and shall show how Infraco and its Sub-Contractors shall comply with the requirements of the Quality Plan.

The Infraco shall have all associated documentation readily available for internal review and review by **tie**. Regular internal audits shall be undertaken by the Infraco to ensure full compliance with ISO 9001 and ISO 9004 in accordance with Clause 5.1 of the Code of Construction Practice. The Infraco shall prepare and submit in accordance with the Review Procedure a "Schedule of Internal Audits" for agreement with **tie**. This shall define the planned nature and timing of the internal audits. Furthermore **tie** reserve the right to undertake external audits in accordance with paragraph 5.2 of the Code of Construction Practice and Code of Maintenance Practice.

The Infraco shall ensure that their management system for the Infraco Works is developed to ensure that it aligns with the requirements of the Tram Project Quality policy Statement (DEL.HSQE.103).

Quality control including materials and works on Site shall also be undertaken in accordance with the requirements of paragraph 3.2 of the Code of Construction Practice. The Infraco shall be required to comply with these Employer's Requirements including the completion of forms and other systems in order to assist **tie** in complying with **tie**'s own safety and quality management systems.

12.8.1 Document Standards and Control

All Deliverables that are shared with, or issued to, **tie** shall be posted and reside within **tie**'s document management system. The official version of any project document shall be the version that exists within **tie**'s document management system. Access shall be granted to **tie**'s document management system on a named basis, and access levels shall be determined by **tie**. The Infraco also agrees to abide by **tie**'s document management procedure as notified to Infraco from time-to-time.

Documents from external parties should be uploaded to the project extranet for processing by document control. The extranet will also be the official conduit for issuing project information. In exceptional circumstances where documents must be exchanged by email, only the Document Control team will receive and issue this information. They will then handle all appropriate processing and distribution.

Deliverables shall conform to the following standards:

Acceptable File Types

- MS Office Suite 2003;
- MS Project 2003;
- MS Visio 2003;
- Portable Document Format (PDF) – Fully-searchable (OCR) Acrobat Reader v7 compatible;
- Compressed Files/Folders – WinZip v10 compatible;
- Graphics – GIF, TIFF, JPG, JPEG, or BMP;
- Audio – Audio files should be saved in MP3 format;
- Video – WMV or MPEG format with WMV preferred;

- Drawings – DWG (inclusive of used templates) and DCF.

Acceptable File Sizes

In general, all files should be optimised to keep their size to a minimum. For email correspondence the maximum allowable attachment size is 10MB. Individual files in excess of 50MB are only acceptable with prior agreement from **tie**.

Project Applications

- Collaboration – SharePoint 2007 (hosted by **tie**);
- Project Planning – Primavera v6;
- Risk Management – Active Risk Manager (hosted by **tie**);
- Deliverables. In addition to Deliverables conforming to the above, they should specifically be supplied in complete, self-contained and fully editable formats.

Typical examples include;

- Drawing Deliverables should be supplied as complete DWG files (inclusive of used templates) as well as the DCF print snapshot;
- Documents should be in Word 2003 (or previous) format;
- Spreadsheets should be in Excel 2003 (or previous) format and include the associated macros, equations, and functions.

Illegal Characters

As a matter of best practice the following characters should not be used in filenames to minimise the risk of error in software applications:

&	**¦**	**$**
~	**¬**	**£**
*****	**^**	**?**
%	**; (semi-colon)**	**!**
#	**, (comma)**	**@**
****	**‘ (apostrophe)**	**=**
/	**` (single quote)**	
<	**“**	
>	**. (dot)**	
{	**: (colon)**	
}		

12.9 Infraco Performance Measurement

As part of the overall project reporting regime, a four weekly report incorporating performance against Key Performance Indicators (KPI) shall be required from the Infraco. These shall be project, as opposed to company, specific.

A fundamental consideration is that the KPIs agreed must be measurable and without dispute, thus they shall be fact based. The outputs shall be compared on a four weekly basis against both four weekly and rolling targets. A colour coded "traffic light" visual warning shall be used.

The KPIs agreed are split into a number of different areas. The following provides the breakdown of components within each of the areas. Deductions against the failure to achieve the agreed KPIs are set out in Schedule 45.

Table 26 – Table showing indication of Safety KPIs

Safety
Accident Frequency Rate (AFR)
Equivalent Fatality Rate (EFR)
Lost Time Accidents (LTA)
RIDDOR
Road Traffic Injuries
Road Traffic Damage (caused by Infraco actions)
Accident Investigations (late receipt)
HSE inspections, observations, improvement notices and prohibitions
Working at height
PPE – not using/not using correctly
Review of Accident Book entries
Possible 3rd Party specific (e.g. Network Rail)
NCRs
CARs (non-completion/late response or action)
Procedure compliance
Test failures (to include concrete and welding)
Safety Tours
Safety Inspections
Security
Achievement of programme
Snagging correction

Method Statements/Risk Assessments – failure to operate in compliance therewith
Late Possessions / Overruns
Reporting
Spills
Working hours contraventions
Complaints
Pollution – water courses; noise; light; dust; others
Trespass
COSHH contraventions
Signage and warning signage
Specific parameters may need to be devised relating to programme, performance, reporting and other specific issues that are important to **tie**.

The Infraco shall submit samples, manufacturers' literature, documentation and other such materials to demonstrate compliance with the Employer's Requirements, from time to time, for review by **tie**, in advance of the associated materials or equipment being procured. The Infraco shall prepare a Schedule of Procurement Proposals to identify all such proposed submissions and their timing for approval by **tie**.

12.10 Cost Management and Reporting

The Infraco shall carry out a pro-active role in cost management and reporting. A cost report shall be submitted by the Infraco to **tie** no later than 3 Business Days before each cost review meetings / or at a 4 weekly period, to be agreed with **tie**. In addition cost summary information shall be provided for inclusion in the Progress Reports.

The Infraco cost reports shall contain comprehensive information and shall be structured in a manner that is commensurate with **tie**'s own reporting structure. The cost reports shall be required to provide information, including the following:

- Executive summary and narrative on significant changes from the previous report;
- Actual / Planned / Forecast Spend Tables / Curves to match the achievement of major deliverables and activities within the Work Breakdown Structure;
- Change Control Schedule and background information;
- Schedule of Compensation Events and background information;
- Value management estimates / analysis;
- Schedule of status of completion of Construction Milestones and Critical Milestones;
- Copy of the progress statements included in Monthly Progress Monitor.

The Infraco shall also be required to provide value engineering estimates and reports. These reports shall be provided by Infraco from time to time, as proposed by the Infraco or as required by **tie**, for the purpose of achieving better value.

12.11 Risk Management

12.11.1 Project Objectives

tie is dedicated to ensuring that a consistent approach to risk management is adopted across the ETN, which shall enable an informed view of risk to be taken.

ETN project risk management's mission is "to successfully manage all risks to and opportunities for the project thus ensuring that a supported and fully functioning operational service is delivered within budget and on time.

The key drivers within this mission are to:

- Promote and support proactive management of risk and opportunity;
- Integrate risk awareness / management, and not risk aversion, into the project culture;
- Manage risk in accordance with best practice;
- Reduce risk exposure to acceptable levels;
- Capitalise on opportunities;
- Ensure that all identified risks are owned and managed by the party best able to manage them;
- Provide assurance and enhanced information to managers and stakeholders.

tie maintains a project risk management plan and risk register covering the strategic, project management and commercial aspects of the ETN and shall continue to do so throughout the Term and operation. **tie** seeks to have all service providers, including the Infraco, contributing towards this risk register.

12.11.2 Risk Deliverables

The Infraco shall provide various Deliverables, as described in this section, to assist **tie** in meeting **tie**'s risk management obligations associated with strategic, project management and commercial aspects of the ETN. The required procedures for managing hazards and risks associated with obligations associated with safety are not covered in this section.

The Infraco shall be responsible for the production, management, development, regular maintenance and necessary updating and distribution of the documentation included within the table below. The documentation shall be held by the Infraco in electronic format with hard and soft copies being made available as required.

Risk Documentation shall be submitted to **tie**, in paper copy and electronically, for their approval in accordance with the Review Procedure and the required dates and frequencies are included in the table below.

Required Action from the Infraco	Timing/Frequency applicable to the Infraco
The Infraco shall provide assurance that they shall manage design and construction risk to the satisfaction of **tie** and in order to fulfil the objectives described in12.11.1. As part of this obligation the Infraco shall be responsible for the production, development and maintenance of a Infraco Risk Management Plan ("IRMP") for the management of all risk aspects of the Edinburgh Tram Network throughout the Term. The IRMP shall focus on the risk factors related to the Infraco managed activities related to the Infraco Works for the delivery of the Edinburgh Tram Network including the risk deliverables noted below. The IRMP shall identify individuals and their responsibility in relation to risk.	Agree format and delivery date for the IRMP with **tie**'s designated risk manager within one month of the Commencement Date. The Infraco shall update and maintain the IRMP throughout the Term. The Infraco shall issue an update to the IRMP at least bi-annually throughout the Term.

Required Action from the Infraco	Timing/Frequency applicable to the Infraco
The Infraco shall be responsible for the development and maintenance of an Infraco Risk Register ("IRR"), to best present all capex, opex, lifecycle, programme and quality risks to the Edinburgh Tram Network. The IRR shall also detail the proposed and completed mitigation of such risks. The platform used shall include the ability to generate reports, highlight risks to **tie**, key programme and cost impacts. The Infraco shall be responsible for the identification of commercial risks associated with all interfaces related to the works and shall facilitate and coordinate the inputs from stakeholders and other parties requested by **tie** from time to time. The IRR shall include analysis of each risk in terms of 'likelihood' and 'impact' providing detail on the inherent risk significance and current residual risk significance. Each risk shall have a designated responsible owner and the Infraco shall provide dashboard type graphical summaries of the risk profile and management actions being taken to mitigate. The risks to be addressed should include technical, operational, infrastructure, interface, economic, legal and regulatory, organisational and environmental risks. The Infraco should review the IRR on a four weekly basis to ensure that it is current. The Infraco shall meet with **tie** on a four weekly basis in line with the tram period calendar to discuss the control of key risks by the Infraco.	Agree format assessment criteria, platform and delivery date with **tie**'s designated risk manager within one month of the Commencement Date. The Infraco shall update and maintain the IRR as required on a four weekly basis and shall distribute the IRR to **tie** on a four weekly basis throughout the Term. Assessment criteria must be compatible with **tie**'s own risk register and assessment criteria.

Required Action from the Infraco	Timing/Frequency applicable to the Infraco
It is recognised that the identification, monitoring and progress of risk shall be discussed at regular workshops. The Infraco shall provide to **tie** a schedule of and undertake workshops, regarding risk matters to assist **tie** in ensuring the effective management of risk in relation to the Edinburgh Tram Network, **tie**, the Operator and/or relevant suppliers should receive timely notification of these in order to be able to attend. It is noted that **tie** may routinely request to attend workshops in order to be able to evaluate Infraco's approach to and performance in relation to risk. Infraco shall also attend meetings and workshops with **tie**'s project and risk management team and other ETN suppliers, the Operator and service providers as instructed by **tie** to take part in update of existing project risk and identification of new risks. The representatives attending such workshops shall be qualified and shall have sufficient knowledge of the ETN project to be able to contribute pertinent information within these workshops.	Provide and agree workshop schedule for the coming 6 months within the risk progress report to **tie**'s designated risk manager within 2 months of the Commencement Date.

Required Action from the Infraco	Timing/Frequency applicable to the Infraco
The Infraco shall be responsible for the preparation and maintenance of a Commissioning Risk Control Report which shall detail the plans for mitigating risks associated with the commissioning of the Edinburgh Tram Network. This should cover commissioning, operational and design risks, but not limited to the trams, the tracks, the power supply and the tram depot. The Commissioning Risk Control Report shall concentrate primarily on the (commercial risk) associated with the commissioning process, but shall also refer to ongoing issues which also affect the construction and/or operation or part operation of the Edinburgh Tram Network .	Agree format of the Commissioning Risk Control Report to **tie**'s designated risk manager (as notified to the Infraco from time to time) within 6 month of the Commencement Date. Final report to be delivered at least 3-months prior to start of the Testing and Commissioning. The Infraco shall update the Commissioning Risk Control Report as required until the Service Commencement Date..
The Infraco shall be responsible for the preparation and maintenance of a Residual Risk Control Report ("RRCR") that will detail the plans for mitigating the risks arising from the construction and commissioning of the Edinburgh Tram Network, which are still of ongoing importance. The RRCR should clearly detail the areas of importance that could affect the ETN after the Service Commencement Date until the end of the Term. These areas could be associated with design, operational and defects factors. Risks to be noted in the RRCR may include, but shall not be limited to commercial risk associated with, snagging, claims, specification defects and other commercial concerns.	Agree format of RRCR with **tie**'s designated risk manager (as notified to the Infraco from time to time) within 12 months of the Commencement Date. Final report to be delivered at least three months prior to the Service Commencement Date. The Infraco shall update the RRCR as required throughout the Term.

Required Action from the Infraco	Timing/Frequency applicable to the Infraco
The Infraco shall prepare and maintain an Operational and Maintenance Risk Register ("OMRR") that will detail the identified risks associated with provision of the Maintenance Services in relation to the Edinburgh Tram Network and management actions being taken to mitigate. The Infraco shall liaise with its Sub-Contractors and the Operator and any other relevant party as required in relation to the creation, development and updating of the OMR	Agree format and assessment criteria of the OMRR with **tie**'s designated risk manager (as notified to the Infraco from time to time) within 12 months of the Commencement Date. First formal report to be delivered at least three months prior to the Service Commencement Date. The Infraco shall update the OMRR in line with the four weekly tram period calendar

Table 27 - Table showing required actions from the Infraco

12.12 Traffic Management / Temporary Traffic Regulation Orders (TTROs)

The Infraco shall be responsible for the preparation of a Traffic Management Plan (TMP) and Work Site Staging Plan (WSSP). The TMP and WSSP shall comply with instructions issued by **tie** and shall be drafted in consultation with **tie** and CEC. The Infraco shall be responsible for the preparation of a Traffic Management Plan (TMP) and Work Site Staging Plan (WSSP). The plans shall apply to all work required in connection with the Infraco and including wider area traffic management measures associated with the construction of the main works. The TMP and WSSP shall comply with instructions issued by **tie** and shall be drafted in consultation with **tie** and CEC.

The TMP and WSSP shall identify and account for interfaces with parallel works, including the MUDFA Works.

The TMP and WSSP shall also include all necessary survey work, temporary traffic diversion modelling, assessment and design which will take account of the works, network constraints and the traffic control requirements.

The design shall identify the required alterations to road layouts, regulatory changes to be enacted through TTRO, altered/additional traffic signal equipment, new traffic signal installations and advance/local road signage.

The design shall also determine the locations of temporary bus stops and taxi ranks, alterations to parking and access/servicing arrangements for residents and businesses in works areas.

The TMP and WSSP shall be submitted within four weeks of the Commencement Date by the Infraco to **tie** and CEC for approval in accordance with the Review Procedure and as detailed in the current CEC-**tie** Interface Protocol relating to TTROs (Protocol Ref: TECH – 01).

The TMP and WSSP submission packages shall be as described in the Protocol and the plans shall include temporary works method statements, and shall identify general traffic, bus and pedestrian diversionary routes, access routes for emergency vehicles, and alternative arrangements for bus stops, parking and loading. The plans shall also include assumptions registers, issues logs and any other means to ensure prompt resolution of issues which could affect the progress and economic execution of the Infraco Works.

Leaflets and other approved publicity material as reasonably required shall be prepared for the information of the public/stakeholders/media showing temporary traffic management arrangements and traffic diversions and how these will operate.

Prior to implementation the TMP and WSSP shall be presented for review and approval to the **tie**/CEC/ Police/TEL Traffic Management Review Panel (TMRP) in-line with the agreed protocols and timescales which include procedures to give stakeholders advanced notification of the proposed arrangements to be implemented during the works.

The TMP and WSSP shall also include all necessary drawings, diagrams and supporting information to show the mobilisation, erection and dismantling of Temporary Works, traffic and pedestrian management during any pre-diversion works and the Infraco Works, access to properties, details of fencing and security measures.

The Infraco shall update the TMP and WSSP every two weeks throughout the duration of the Infraco Works for review at fortnightly design meetings and every four weeks at stakeholder and third part meetings.

The Infraco shall be responsible for the preparation of draft TTROs which shall be submitted to **tie** for onward submission to CEC, in its capacity as Roads Authority, for approval, again as described in the current CEC-**tie** Interface Protocol relating to TTROs (Protocol Ref: TECH – 01). The submission packages shall be as described in the Protocol.

TTRO submissions will adhere to the programme detailed in the Protocol.

The Infraco shall also attend meetings in relation to the TTROs, as required by **tie**, including representations to the **tie** / CEC Roads Working Group Committee, which convenes quarterly.

The Infraco shall develop a set of requirements in relation to TTROs and traffic management, which shall be based on information supplied to the Infraco by **tie** and/or **tie** ("TTRO Obligations and Traffic Management Plan") and shall take account of the interface on traffic management that will be required in relation to the MUDFA Works.

The Infraco shall prepare and develop project-specific procedures for complying with the TTRO Obligations and Traffic Management Plan, and these procedures shall be submitted for approval by **tie** and CEC in sufficient time to avoid disruption to the Programme.

By appropriate induction, the Infraco shall ensure all site-based personnel, management staff, operatives and visitors are fully aware of and understand the procedures contained within these Employer's Requirements.

The designated project or site manager appointed by the Infraco shall be accountable for the implementation and compliance with these requirements and procedures.

The Infraco shall ensure that the overriding considerations expressed in these procedures and requirements shall be the safety of road users, minimising disruption caused by the Infraco Works, pedestrian management and ensuring that traffic and pedestrian disruption is kept to a minimum.

This shall include taking such measures as CEC, in its capacity as roads authority, may reasonably require.

The Infraco shall ensure that reasonable access to all business, residential premises and properties (having regard to Infraco's obligation to comply with the Programme) along the route of the Edinburgh Tram Network is maintained at all times. Infraco shall not be obliged by virtue of this provision to provide access which is more extensive than the access agreed in any Third Party Agreement.

12.13 Stakeholder Management

12.13.1 General

A Stakeholder and Communications Management Plan has been developed by **tie**. The Infraco shall comply with the requirements of this document.

The Infraco shall be, jointly with **tie**, accountable for minimising any possible adverse impact of the implementation of the Edinburgh Tram Network on stakeholders (both statutory and non statutory), local businesses and the general public.

12.13.2 Design

The Infraco shall incorporate the following requirements into the design in addition to any other requirements as defined:

- Securing, implementing and incorporating into the design all necessary Network Rail, BAA and other third party agreements;
- Assisting by providing all technical details relevant to the compulsory purchase order process and land acquisition process (including wayleaves and servitudes); including integration with **tie**'s stakeholder and GIS systems.
- Liaising with CEC, Scottish Executive, Historic Scotland, World Heritage Trust, Scottish Natural Heritage and others as required by **tie** in relation to the performance of the Infraco Works.

12.13.3 Liaison and Public Information

The Infraco shall appoint a liaison officer to manage all public relations, information and press related matters relating to the Infraco Works, who shall along with the necessary technical, commercial and other Infraco resource, liaise with **tie**, and if so requested by **tie**, with CEC, other statutory bodies, members of the public, local businesses, the press and the media as may be

necessary on all matters relating to the Infraco Works. Except where expressly stated in the Agreement, the Infraco shall not make any publicity or media statements or make any other formal disclosure of information regarding the Infraco Works without the prior approval of **tie**.

The liaison obligation referred to in the above paragraph shall include, but shall not be limited to the following matters:

- From time to time as directed by **tie**, Infraco shall be required to participate in business, stakeholder and community liaison groups, public meetings and consultation meetings as the progress of the Infraco Works dictate.

- From time to time as directed by **tie**, Infraco shall be required to provide proactive input, information and comment into information initiatives organised by or on behalf of **tie** and attending as requested by **tie** at any relevant consultation meetings

- As directed by **tie Infraco** will assist with the development and maintenance of, and adherence to, a communications protocol for dealing with all stakeholders, businesses and members of the public affected by the Infraco Works. In particular this will require strict adherence to timescales determined by **tie**.

- Assisting with the development and maintenance of procedures developed by **tie** in relation to stakeholder management by way of the provision of information relating to the Infraco Works

- Provision of weekly updates to **tie** on the progress of the Infraco Works and all planned Infraco Works in a form reasonably requested by **tie**.

- Depending upon the type of communication, Infraco shall give **tie** a minimum of two weeks notice in advance of all plans for any formal communication with stakeholders, businesses and members of the public (e.g. for major customer works governed by the Customer Interaction Cycle far more weeks would be required). The form and content of such formal communication shall be subject to **tie**'s prior approval

- Provision to **tie** of all information reasonably requested by **tie** in respect of the Infraco Works planned in a form prescribed by **tie** and timescales and frequency agreed with **tie**.

- **tie** and Infraco will be jointly involved in the appointment of appropriately qualified "Tram Helpers". They will be directly managed by **tie,** but integrated into Infraco work areas and teams through joint induction and briefing; appropriate cross training; "Tram Helper" visibility in Infraco work areas; "Tram Helper" involvement in the direct management of stakeholder issues on site;

direct engagement by "Tram Helpers" or appropriate Infraco management and staff to assist in the resolution of on site issues; provision of appropriate Infraco uniform and equipment, etc. "Tram helpers" are to be recruited and in place four weeks prior to commencement of notification.

- Provision and use of approved branding materials, PPE kit and signage at all operational Work Sections. No such materials, kit or signage shall be erected at any Work Section without the prior approval of **tie**.

- The provision and distribution of traffic routing maps which conform to the terms of the TTROs for all areas affected by the Infraco Works in advance of the Infraco Works starting in any particular location as may be requested by **tie**. In the event that **tie** requires that such material is for public issue, public issue shall not occur before the form and content has been approved by **tie**. Infraco shall ensure that all public statements (including by way of media referred to in the sections below (customer care centre, website, weekly newsletter, monthly newsletter, call centre and communication log) in relation to the Infraco Works are consistent with (**tie**'s) Communications Strategy and integrated with **tie**'s systems and procedures.

12.13.4 Information Centre

The Infraco shall provide all information and documentation regarding the Infraco Works as may be reasonably required by **tie** in respect of the mobile and fixed information centres being operated jointly by **tie** and Infraco in relation to the Edinburgh Tram Network. The frequency of update and version control of information shall be subject to a process agreed with **tie**.

12.13.5 Website

The Infraco shall provide all information regarding the Infraco Works, reasonably requested by **tie**, in order to populate the website, which shall be maintained and operated by **tie** throughout the progress of the Infraco Works, in respect of the Edinburgh Tram Network. The frequency of update and version control of information shall be subject to a process agreed with **tie**.

12.13.6 Weekly Newsletter

The Infraco shall produce and publish weekly newsletters every Wednesday, detailing the Infraco Works to be undertaken in the forthcoming week and outlining, with appropriate maps, drawings and diagrams, the impact on the general public, businesses and in particular any alterations to road traffic circulation patterns required by the coming week's Infraco Works.

Each newsletter, the contents and format of which shall have the prior approval of **tie**, will also be issued, if requested by **tie**, by fax and email to: local and national newspapers and other news media, CEC, Lothian and Borders Police, the emergency services, to any party or parties requested by **tie** and to any other persons or organisations that have requested receipt of the newsletters.

The newsletters shall also be distributed door to door by the Infraco in affected locations and the Infraco shall advise **tie** when such distribution is occurring.

The Infraco shall monitor and record the distribution of newsletters, recording who is carrying out such distribution, the intended recipients etc, so as to enable **tie** to carry out its own audit and monitoring of such distribution. Infraco to ensure, by regular surveys that circulation data is accurate and up to date.

Sufficient free distribution take-away hard copies of these newsletters shall be delivered to and placed in the information centre by the Infraco before 08:00 every Thursday morning.

The Infraco is required to submit a draft of each issue of the newsletters to **tie** no later than midday on the Monday immediately preceding the proposed issue of the newsletters on the Wednesday. **tie** shall respond before 17.00 hours the same day.

12.13.7 tie Monthly Newsletter

The Infraco shall provide all information and assistance reasonably requested by **tie** in relation to the publication by **tie**, of a monthly newsletter in relation to the progress of and future plans for the Edinburgh Tram Network.

12.13.8 Customer Contact Centre

The telephone number, fax number and e-mail address of the call centre to be operated jointly by **tie** and Infraco in relation to the Edinburgh Tram Network (the "hotline") shall be publicised through the press and the weekly newsletter and clearly displayed on all appropriate PPE kit, site signage, hoardings and at other suitable locations within and throughout the vicinity of the Infraco Works. All letters, e-mails, customer queries shall be answered by Infraco within timescales, to be agreed in advance with **tie**.

12.13.9 Communication Log

All contacts, communications, complaints, comments and queries howsoever received by the Infraco shall be registered in a suitable electronic log (the "communication log").

The Communications Log shall be developed and maintained by Infraco in a manner that allows it to be fully integrated with **tie**'s Stakeholder Database and GIS systems. The communication log shall set out each contact under the type (e.g. General, Traffic, Safety, Vibration, Noise, Dirt, Disruption, Injury, Parking, Access, RTA, publicity, suggestions etc).

The method of approach shall also be logged (e.g. phone, direct, letter, email, etc.) as well as the time and date.

The log shall be so constructed such that statistical analysis of the different communications can be presented as part of the data to be provided to **tie**. It shall be a requirement that the Infraco shall deliver an "above average" customer satisfaction level, with criteria, frequency and method of assessment to be agreed by **tie**. In order to demonstrate this, there shall be a requirement for the Infraco (and as required **tie**) to undertake internal (and external) audits of the overall engagements with the stakeholders. All this information shall be summarised by the Infraco in its monthly progress report.

Infraco shall take such steps as are required to address any such contact, communication, complaint, comment or query in accordance with the response requirements set out in Table 28 - Notification Hierarchy and in line with the agreed enquiry management process.

To the extent that a stricter response requirement is otherwise required under the Agreement, the stricter response requirement shall apply.

To the extent that Table 26 provides for the recovery of any amount by **tie** from the Infraco, such amount may be deducted from any monies due to or to become due to the Infraco or, alternatively, may be recovered from the Infraco as a debt.

A record of all remedial actions taken shall be maintained.

In the event of the Infraco receiving a complaint, a follow up letter or electronic communication shall be passed to the complainant by the Infraco within 24 hours of their receipt of the complaint, outlining the complaint and details and timing of the remedial action being undertaken by the Infraco.

An up to date copy of the communications log shall be compiled daily by the Infraco, together with a report on the progress of any actions.

The communications log shall be inspected and signed daily by a nominated senior representative of the Infraco and shall be counter signed by the Infraco's Representative at least once per week.

The Infraco's Representative shall write a report to **tie** and/or the Nominated City Officer of CEC (as notified by **tie** from time to time) at a frequency determined by **tie** (at least once per month) containing a list of any breaches of the requirements as defined within this section and also Schedule 3 (Code of Construction Practice and Code of Maintenance Contract) occurring within the previous month, setting out:

- the nature of the breach;
- the duration of the breach;
- the action taken by the Infraco to mitigate the breach; and
- the steps taken to minimise the likelihood of a subsequent occurrence of the breach.

Subject to the Infraco obtaining **tie**'s prior approval, a copy of each week's communication log shall be placed every Friday in the information centres, where it will remain until completion of the Infraco Works.

Any person, including representatives of **tie** and CEC's nominated representatives may freely inspect all deposited copies of the communications log during the normal opening hours of the information centres.

The version of communications log on public display should not breach any data protection legislation or other Law.

Copies of the communication log shall be forwarded to **tie**'s Representative and/or and CEC's Nominated City Officer once per week.

The master communication log shall be available for **tie**'s Representative and CEC's Nominated City Officer to inspect at any other time during normal working hours.

Level of Urgency	Category of Notification	Required Response Time
1	**High urgency** Involves an immediate threat to persons or property or the circumstances otherwise require immediate rectification.	Immediate action required. If response not completed by the Infraco within 4 hours, **tie** may procure that the relevant work is carried out and the costs of so doing shall be recovered from the Infraco.
2	**Medium urgency** No immediate threat to persons or property, but circumstances require rectification within 24 hours.	Remedial action requires to be completed within 24 hours. If the Infraco does not complete the required response within 24 hours, **tie** may procure that the relevant work is carried out and the costs of so doing shall be recovered from the Infraco.
3	**Issue requires rectification** but no immediate threat to persons or property and the circumstances do not otherwise require immediate rectification.	Timescales for rectification to be agreed between the Infraco and **tie**. In the event that the Infraco does not comply with the agreed timescales, **tie** may procure that the relevant work is carried out and the costs of so doing shall be recovered from the Infraco.

Table 28 - Notification Hierarchy

13 Permits / Approvals

The Infraco shall obtain all necessary permits and approvals prior to undertaking investigations or works on Site, in accordance with paragraph 3 of the Code of Construction Practice.

13.1 Method Statements

The Infraco shall prepare method statements in respect of all investigation and work activities, as detailed in this Section and paragraph 3.2 of the Code of Construction Practice and submit these in accordance with paragraph 3.3 of the Code of Construction Practice.

The Infraco shall produce a method statement entitled "Procedures for dealing with Unidentified Apparatus or Unrecorded Artificial Obstructions", which shall be submitted by Infraco in accordance with paragraph 3.3 of the Code of Construction Practice. This method statement shall contain procedures which shall confirm the processes for dealing with unforeseeable events or circumstances, the discovery of unidentified apparatus (including live services) or unrecorded artificial obstructions. The final version of the method statement and procedures shall be agreed with the relevant key third parties, Approval Bodies, the Utilities and the emergency services The method statement shall be updated and a final version produced which shall be finalised by the Infraco in accordance with paragraph 3.3 of the Code of Construction Practice.

13.2 Existing Structures Which May Affect Progress and relationship with Third Parties

The Infraco shall undertake works to address the condition of existing structures where such condition may affect the progress of the Infraco Works. Where such work is completed the Infraco shall take appropriate photographs to fully demonstrate the quality of the reinstatement works.

The Infraco shall undertake survey inspections associated with buildings and structures which may be at risk of physical damage as a result of the Infraco Works.

For such structures and buildings the Infraco shall compile an appropriate schedule of such buildings / structures, and produce surveys / records similar to those described under paragraph 18.2.1 of Schedule 3 (Code of Construction and Code of Maintenance Practice).

Early warning must be given to **tie** where any third party is, or is likely to start, acting unreasonably. In these situations, **tie** will seek to resolve any issues with the third party to assist Infraco.

13.3 Network Rail

The Infraco shall ensure that the requirements of the Network Rail GRIP process are implemented on the works for which they are responsible whilst working in accordance with all relevant Network Rail Group Standards.

The contract requirements for Network Rail with regard to health and safety are included within the Network Rail document NR/SP/OHS/008. The project specific requirements are identified within the Safety Clause Menu against the requirements of Network Rail document NR/SP/OHS/008 and indicated with 'ticks' in the contractor column sections 51 to 59 inclusive of the safety clause menu and any other requirements that the Infraco is proposing by virtue of his method of undertaking the Infraco Works. The safety clause menu shall be signed off by the Infraco to confirm its proposals.

The Infraco Works shall be undertaken as Third Party Works as identified within the Network Rail document (RT/LS/P/043).

14 Human Factors

The Infraco shall provide systems and working practices that are:

- As easy to use as possible;
- Unlikely to cause annoyance or stress to users of the Edinburgh Tram Network, whether members of the public, operators, or maintainers; and
- Likely to promote safety to all.

The Infraco shall systematically and comprehensively:

- identify all the human factors issues associated with the engineering of the Edinburgh Tram Network, using task analysis;
- determine which of these human factors issues pose the most significant risk to the efficiency, productivity, safety and health of the Edinburgh Tram Network; and
- describe the organisational arrangements and processes the Infraco intends to put in place to manage these significant human factors issues as part of the engineering of the Edinburgh Tram Network

The Infraco shall produce and maintain in accordance with the submittals schedule a human factors management plan, covering the requirements summarised above, and where appropriate, shall undertake human factors studies to recommend solutions.

Areas of particular concern are:

- The human computer interfaces in the Control Centre;
- The layout of the driver's cabs;
- The facilities to enable maintenance of equipment:
  - In the workshop and Depot;
  - At trackside;

- In substations;
- At the Tramstops; and
- In the Control Centre.

The Infraco shall adopt all applicable best practice and guidelines for human factors. In designing the environment in the Control Centre, the Infraco shall comply with BS EN 50126 and ISO 11064 "Ergonomic Design of Control Centres.

15 Reliability, Availability and Maintainability

15.1 Reliability and Availability

The Edinburgh Tram Network is made up of many different subsystems, most of which may affect the reliability of operation of the ETN as a whole. In respect of achieving and maintaining reliability, the Infraco shall design, construct and maintain the Edinburgh Tram Network in accordance with Good Industry Practice, subject to the reasonable constraints of cost. Where necessary, the ETN should be made resilient to single point equipment and cable failure by employing suitable levels of equipment/cable redundancy and duplication.

On equipment or cable failure, subsystems shall be designed in a fail-safe manner, with graceful degradation. Limited back-up facilities shall be provided to maintain services under specified partial failure conditions.

Defined below are the requirements for availability of individual subsystems (each of which is given a definition), and also the availability of individual components of the subsystems.

In addition to the above, the overall availability of the Edinburgh Tram Network and its subsystems must support the tram punctuality requirement that is set out in these Employer's Requirements. Consequently it may be necessary to increase the minimum requirements that are set out below, especially as the consequences of the actions that third parties may take, including delays caused by other road users, need to be included in the punctuality analysis for the Edinburgh Tram Network.

For all components and subsystems, assume a Mean Time to Repair (MTTR) of 4 hours.

Any downtime required for planned maintenance can be discounted from the determination of availability, provided that such maintenance can be reasonably undertaken at a time when the maintenance has no impact on the operation of the ETN. This will often be during overnight shut downs.

15.2 Traction Power System

Component or Subsystem	Minimum Availability
AC circuit breaker, where its availability is defined as the probability that it either fails to conduct electricity when commended to be closed.	99.99%
Transformer / rectifier where its availability is defined as the probability that it either fails to provide the nominal 750VDC when energised.	99.99%
DC circuit breakers and busbars, where its availability is defined as the probability that traction power is not available from the DCCB when commanded to be closed, provided that 750 VDC is available at from the rectifier	99.99%
Transformer / rectifier where its availability is defined as the probability that it fails to provide the nominal 750VDC when energised by the HV input.	99.99%
Substation battery and charger, where its availability is defined as the probability that control voltage is not available from the battery at any time during its normal operation, regardless of the state of the incoming LV supply	99.99%
Substation, where its availability is defined as the probability that 750VDC voltage is not available for the OLE when the substation is commanded to provide 750VDC	99.75%

Table 29 - Substation Equipment

Component or Subsystem	Minimum Availability
OLE System, where its availability is defined as the probability that in any linear km of the OLE system, trams are not able to operate at the normal operational speed due to defects in the OLE. This is based on an 8 hour incident once every 3 years, 20hr/day operation and (20 route-km plus depot, about 50 track-km)	99.99925% for each km

Table 30 – Overhead Line Equipment

15.3 Supervisory and Communications Systems.

Component or Subsystem	Minimum Availability
ODN node	99.99%
Fibre Optic Cabling	99.99%
Patch Panels and Connectors	99.99%
ODN network, where its availability is defined as the probability that any message from a given input to a node reaches its intended destination node correctly and could be transmitted onwards by that node.	99.99%

Table 31 - Operational Data Network

Component or Subsystem	Minimum Availability
Transponder (if used)	99.9%
Loop Detector	99.9%
TPDS Trackside Controller	99.9%
TPDS subsystem, where its availability is defined as the probability that any given tram has its position detected and passed to the signal controller and to Control Centre operators correctly, assuming that the ODN is fully functional and that the hardware component of the Control Centre servers and workstations is fully functional	99.75%

Table 32 - Tram Position and Detection System

Component or Subsystem	Minimum Availability
Passenger Information Display	99.9%
Local Controller (if required)	99.9%
PID subsystem, where its availability is defined as the probability that the appropriate message is displayed correctly at a given PID, assuming that the ODN is fully functional and that the hardware component of the Control Centre servers and workstations is fully functional	99.75%

Table 33 – Passenger Information Display

Component or Subsystem	Minimum Availability
Telephone Handset	99.9%
PABX	99.99%
Telephone network, where its availability is defined as the probability that any 30 second conversation between a given telephone and another given telephone is heard clearly and completely by the caller and the intended recipient, assuming that the ODN is fully functional.	99.75%

Table 34 – Telephone Network

Component or Subsystem	Minimum Availability
PA speaker	99.9%
PA controller	99.9%
Microphone and speaker	99.9%
PA subsystem, where its availability is defined as the probability that an operator can make an intended announcement clearly at a given platform, assuming that the ODN is fully functional and that the hardware component of the Control Centre servers and workstations is fully functional.	99.75%

Table 35 - Public Address System

Component or Subsystem	Minimum Availability
Base Station	99.95%
Mobile Handset (Tram, Vehicle, or Hand Held)	99.7%
Central Switch	99.99%
Operational Radio subsystem, where its availability is defined as the probability that a 10 second call (voice) or short data message can be received clearly by the intended recipient, assuming that the ODN is fully functional and that the hardware component of the Control Centre workstations is fully functional	99.75%

Table 36 - Operational Radio System

Component or Subsystem	Minimum Availability
Help / Emergency Help Point	99.9%
Help Point subsystem, where its availability is defined as the probability that a member of the public can contact the Control Centre operator and can carry out a Help Point conversation lasting 20 seconds, clearly and without interruption, assuming that the ODN is fully functional and that the PABX is fully functional	99.75%

Table 37 - Passenger Help / Passenger Emergency Help System

Component or Subsystem	Minimum Availability
CCTV camera	99.95%
Digital Video Recorder	99.95%
CCTV Matrix	99.95%
CCTV subsystem, where its availability is defined as the probability that an image is displayed correctly and in the specified sequence at the Control Centre, assuming that the ODN is fully functional and that the hardware component of the Control Centre servers and workstations is fully functional	99.9%
Recording and replay subsystem, where its availability is defined as the probability that an image is displayed from any given time in the past (within the recorded period) can be retrieved and displayed correctly, assuming that the ODN is fully functional and that the hardware component of the Control Centre servers and workstations is fully functional	99.9%

Table 38 - CCTV System

Component or Subsystem	Minimum Availability
SCADA RTU (including I/O cards and interface cards)	99.95%
SCADA subsystem, where its availability is defined as the probability is the lesser of (a) that an indicator is read correctly at the RTU, transmitted to the SCADA Master Station in the Control Centre, and displayed correctly on any SCADA display that is in use within four seconds: and (b) that a control is effectively transmitted to an outstation within two seconds, assuming that the ODN is fully functional and that the hardware component of the Control Centre servers and workstations is fully functional	99.75%

Table 39 - SCADA System

Component or Subsystem	Minimum Availability
Servers (if necessary, by use of hardware and software redundancy)	99.99%
Workstations	99.9%
Printers	99.5%
CCTV Matrix Controller	99.9%
LAN Switches, Routers and Hubs	99.99%

Table 40 - Central Control Equipment

15.4 Maintainability

The ETN and its components shall be designed with maintainability in mind. To this end, the following shall be observed:

- Important equipment shall be in a redundant configuration, so that a component may be replaced while standby equipment takes over its duty;
- Equipment shall be replaceable, if possible, as field replaceable units, so that defective components can be replaced without the need to power down the overall piece of equipment; and
- Equipment, particularly at trackside and on Tramstops, shall be positioned so that where possible it is accessible for maintenance or replacement without the necessity to halt tramway traffic or to close the Tramstop and without the need to use access equipment such as steps.

15.5 Supportability

The equipment selected for use on the Edinburgh Tram Network shall be selected so that:

- It has a long design life, as specified in section 6 of these Employer's Requirements.
- It shall be based on standard Commercial Off-the Shelf (COTS) equipment as far as appropriate, so that replacement parts may be easily obtained and integrated into the ETN without the necessity of resorting to the original subsystem or equipment suppliers.

16 Electromagnetic Compatibility

16.1 EMC Directive

On 20th July 2007 a new EMC Directive came into force in the European Union. Statutory Instrument 2006 No.3418 implements the new EMC Directive 2004/108/EC in UK law. The rules for the new EMC Directive have changed significantly from the old Directive (89/336/EEC). After 19th July 2009 declarations made will require appropriate "Technical Documentation". This means that the Declaration of Conformity made using the old conformance mechanisms will have to be updated to use "Technical Documentation". The Infraco must be aware of the relevance of the 19th July 2009 date and insist that suppliers provide documentation accordingly.

16.2 Essential Protection Requirements

The purpose of the EMC Directive is to ensure that electrical/electronic equipment does not cause or be susceptible to electromagnetic disturbance. The protection requirements required of all electrical/electronic equipment/systems/installations are as follows:

- the electromagnetic disturbance generated shall not exceed the level above which radio and telecommunications equipment or other equipment cannot operate as intended; and

- they shall have a level of immunity to the electromagnetic disturbance to be expected in their intended use which allows them to operate without unacceptable degradation of that intended use.

The Infraco must produce an Edinburgh Tram Network specific EMC strategy document in accordance with the Submittal Programme that clearly defines its strategy for achieving compliance with these essential protection requirements and shall submit it to **tie** for its approval.

17 Health, Safety, Quality and Environment

17.1 Quality Management

The Infraco shall undertake the Infraco Works fully in compliance with quality management processes and procedures referenced in ISO 9001 and ISO 9004.

The Infraco shall develop a Quality Plan to meet the requirements of ISO 10005 - 1995, and which fully defines all quality aspects of the Infraco Works. The Quality Plan shall be submitted in accordance with the Review Procedure. The Quality Plan shall demonstrate an integrated quality management system relating to the design, construction, testing, commissioning and maintenance of the Edinburgh Tram Network and shall show how Infraco and its Sub-Contractors shall comply with the requirements of the Quality Plan.

The Infraco shall have all associated documentation readily available for internal review and review by **tie**. Regular internal audits shall be undertaken by the Infraco to ensure full compliance with ISO 9001 and ISO 9004 in accordance with paragraph 5.1 of the Code of Construction Practice. The Infraco shall prepare and submit in accordance with the Review Procedure a "Schedule of Internal Audits" for agreement with **tie**. This shall define the planned nature and timing of the internal audits. Furthermore **tie** reserves the right to undertake external audits in accordance with paragraph 5.2 of the Code of Construction Practice.

The Infraco shall ensure that its management system for the Infraco Works is developed to ensure that it aligns with the requirements of the Tram Project Quality Policy Statement (DEL.HSQE.103).

Quality control including materials and works on Site shall also be undertaken by the Infraco in accordance with the requirements of paragraph 3.2 of the Code of Construction Practice and the Project Safety and Quality Interface Document. The Infraco shall be required to comply with the requirements of this document including the completion of forms and other systems in order to assist **tie** in complying with **tie's** own safety and quality management systems.

17.2 Health & Safety

17.2.1 Safety Management Plan

The Infraco shall submit a safety management plan that is over-arching with regard to safety and defines the management procedures that shall be put in place to ensure health and safety for the design, construction, testing, commissioning and maintenance of the Edinburgh Tram Network. This document shall be stand alone and separate from other safety deliverables such as health and safety plan, system safety management plan, case for safety development etc. The Safety Management Plan shall address all issues relating to the safety of the Infraco Works, staff and third parties, however specific details relating to the items below are required and shall be submitted by the Infraco in accordance with the Submittal Programme:

- The plan shall detail the approach and all management procedures relating to health and safety for the Edinburgh Tram Network;
- The plan shall show how the Infraco will ensure that its Sub-Contractors apply all relevant health and safety policies and procedures to all Sub-Contractors;
- Details of all interfaces associated with safety and the procedures of how these shall be managed. Interfaces shall include Roads Authorities, Health and Safety Executive; any other relevant statutory authorities, HMRI; Competent Person (ROGS); Network Rail; Police; Fire and Rescue Services; Ambulance Service; and all applicable Law;
- Proposed Safety Initiatives;
- How the Infraco proposes that a safety culture shall be cascaded and enforced throughout the team including with Sub-Contractors;
- Infraco proposals for how safety shall be incentivised throughout the team, including with Sub-Contractors;
- The emergency procedures which the Infraco propose to implement;
- Details of how the Infraco shall implement accident and incident reporting and promotion of an open culture;
- The Infraco's safety inspection & safety tour regime;

- An outline of the Infraco's procedures relating to safety for compliance with **tie**'s Drugs & Alcohol Policy and procedures and details of the Infraco's own similar policy and procedures;
- Details of any particular safety issues the Infraco considers would be significant and initial mitigation measures the Infraco considers necessary;
- Commissioning of the Edinburgh Tram Network;
- Driver Training on the Edinburgh Tram Network;
- Maintenance of the Edinburgh Tram Network.

17.2.2 Occupational Health & Safety Management System

The Infraco shall adopt an occupational health & safety management system consisting of the implementation and use of those processes and procedures referenced in BS 8800, OHSAS 18001-2007 and/or HSG 65 (Successful H&S Management).

17.2.3 Project Health & Safety Plan and Health & Safety File

The Infraco shall develop a construction phase plan and supply all necessary information for the Project Health & Safety File in accordance with the Construction (Design and Management) Regulations 2007 and L144 Managing Health and Safety in Construction and as described in the pre-construction information. The construction phase plan shall require to be submitted in accordance with the Review Procedure.

17.2.4 Interface with tie's Safety Systems

The Infraco shall ensure that the management system for the Infraco Works is developed to ensure that it aligns with the requirements of the Tram Project Safety Policy Statement (DEL.HSQE.105). Section 32 of the Agreement contains the Project Safety (and Quality) Interface Document. The Infraco shall be required to comply with the requirements of this document including the completion of forms and other systems in order to assist **tie** in complying with **tie**'s own safety and quality management systems.

17.2.5 System Safety Management Plan (SSMP)

The Infraco shall be responsible for the development of the SSMP.

The SSMP shall define the engineering process that shall ensure, and provide a record of, assurance that the tramway has achieved an acceptable level of performance. This is achieved through a staged "case for safety" submission (refer below) process to signify that safety has been engineered into the design of the Edinburgh Tram Network. The SSMP shall define the process, activities and requirements for the preparation for a "case for safety" at the relevant design stage. The SSMP shall also define the system safety management organisation and the strategy to achieve the individual hazard system safety targets. The SSMP is concerned with only with those hazards that could give rise to an increased level of risk to passengers, staff and the general public from the operating system. (All health and safety hazards related to the risk to workers, staff and the general public from the construction activities should be covered under the safety management plan.)

17.2.6 The Railways and Other Guided Transport Systems (Safety) Regulations 2006

The Edinburgh Tram Network shall be delivered in accordance with The Railways and Other Guided Transport Systems (Safety) Regulations 2006 (ROGS).

The Infraco shall design and execute the Infraco Works using safety management and procedures to demonstrate that the Edinburgh Tram Network is safe to introduce into service as defined by the Safety Management System under ROGS. This shall also include the development of the Case for Safety to the satisfaction of the Competent Person and the Project Safety Certification Committee. These aspects form an integral part of the design of the Edinburgh Tram Network and are detailed in this section of these Employer's Requirements.

The Infraco shall undertake all Infraco Works in accordance with the written safety verification scheme requirements prepared by **tie**. Safety verification will be undertaken by **tie**. The Competent Person shall assure the process and its outputs. The Infraco shall allow **tie** and the Competent Person access to undertake safety verification activities, such as system safety audits. The Infraco shall develop a safety management system for when the Edinburgh Tram Network is operational which complies with the requirements of ROGS and other relevant legislation to the satisfaction of the Competent Person and **tie/TEL**.

Whilst there is no requirement in ROGS for projects such as the ETN to be notified to or given prior consent or approval by HMRI, HMRI have been involved in the development of the Edinburgh Tram

Network scheme to date and it is **tie**'s intention to continue this involvement. The Infraco shall assist **tie** in any liaison with the HMRI when requested to do so.

17.2.7 Health and Safety Management

The health and safety responsibilities and CDM/ROGs application are defined in the matrix below for each phase of the project.

Table 41 – Matrix showing Contractual Responsibilities – Health & Safety Management

			Infraco				Revenue services	
RESPONSIBILITIES	**MUDFA**	**Pre Novation Design**	**Post Novation Design**	**Construction / Installation**	**Commissioning / Test running ***	**Shadow running**	**Operation**	**Maintenance.**

* The project moves into this stage in phases once key milestones have been achieved e.g. the energisation of the OLE within the depot.

** This is flexible. TEL may assume the role of **ROGS duty holder** during this phase.

KEY

Responsibilities under the CDM Regulations

Responsibilities under the ROGS Regulations

17.3 Environmental Management

17.3.1 Environmental Management System

The Infraco shall adopt an environmental management system consisting of the implementation and use of those processes and procedures referenced in ISO 14001.

Documentation developed to meet the requirements of the environmental management system shall be submitted in accordance with the Review Procedure.

The Infraco shall ensure that the management system for the Infraco Works is developed to ensure that it aligns with the requirements of the Tram Project Environmental & Sustainability Policy Statement (DEL.HSQE.101).

17.3.2 Environmental and Sustainability Action Plan

The Infraco shall submit and maintain an Environmental & Sustainability Action Plan (EAP). This shall be based on SDS Environmental Mangement Plan and shall cover environmental issues for the duration of the Infraco Works, including design and construction stages. It shall describe the management process, procedures and interface requirements associated with meeting the Infraco's environmental responsibilities.

It shall then develop in detail the potential impacts on environmental resource, mitigation measures and responsibilities associated with all stages of the Infraco Works.

The EAP shall be prepared using the following sources of information.

- the Environmental Statements;
- The Design Manual;
- The Noise and Vibration Policy as contained within the Code of Maintenance Practice;
- The Code of Construction Practice;
- The Landscape and Habitat Management Plan for the Roseburn Corridor;
- The Badger Mitigation Plan for the Roseburn Corridor;
- Agreements made with statutory bodies; and

- Parliamentary agreements.

The EAP shall be amended by the Infraco to reflect any changes to the tramway design or engineering solutions and the results of surveys..

17.3.3 Construction Environmental Management Plan (CEMP)

The Infraco shall prepare a construction environmental management plan (CEMP) including method statements, as necessary, to convey the required level of information during the construction stage of the Infraco Works.

Site specific EMPs shall be prepared for each geographical section and intermediate geographical section as appropriate. These plans shall be produced by the Infraco prior to any works commencing on Site and must be reviewed by **tie** before work starts. The site specific EMPs must separately address the following sites and/or issues:

- Site accommodation, compound and offices and storage areas;
- Site clearance;
- Geographical sections and intermediate geographical sections of the Tram route;
- The Depot;
- Structures, such as sub-stations not already included in the above; and
- Road, cycleway and footway works, including drainage, signage and lighting.
- A series of site specific and topic related EMPs shall also be produced by the Infraco that shall address all the environmental issues, landscape, ecology etc. These shall cover the general control and protection measures for each topic as it relates to each of the site specific sections in the plan area. The Infraco shall have responsibility for the production, content and implementation of the Site Specific EMPs.
- The Infraco shall submit to **tie** the site specific EMPs 8 weeks prior to the commencement of the relevant section of the Infraco Works.

- **tie** shall comment on the plan(s) submitted, in accordance with the Review Procedure and agree the final plans prior to the commencement of any work on the relevant section or activity.

17.3.4 Requirement of Site Specific EMPs

The Infraco shall develop the site specific EMPs to include the following details:

- **A description of the works to be undertaken**
  - List of all separate work activities that fall within the scope of the works.
- **A detailed programme of the construction activities**
  - Proposed dates and sequence of the works (showing how environmental impacts are affected by potential changes to the Programme);
  - Details of proposed normal working hours and intended start up and close down times; and
  - Outline of any works which may require construction activities outside of normal working hours.
- **Location of the works, including a site plan, showing construction site boundaries**
  - This shall show the position of plant and position of any sensitive receptors e.g. watercourses, local residents, etc.
- **Personnel access routes/points**
  - Location plan of each access route/point;
  - List of activities for which each access point is to be used
- **Vehicular access routes/points**
  - Location plan of each access route/point;
  - List of activities for which each access point is to be used
- **Equipment and plant to be used (including type, make and expected number)**
- **Method of delivery/removal of materials and plant**

- **Details of proposed site accommodation**
- **Details of how public right of way and access to property will be retained and managed**
  - A list of Consents/permissions obtained or to be obtained for the works
- **External Consultation**
  - A list of those notified of the works and the date notified
  - A list of proposed notifications and dates
- **Significant environmental impacts relating to each activity.**
  - (This should draw upon the definitions of significant impacts used in the Environmental Statement).
- **Significant environmental risks relating to each activity.**
- **Receptors which are likely to be affected by the works.**
- **On-site mitigating measures for each impact and risk.**

These will be transferred onto site management statements which will briefly state the key risks and mitigating measures which have been agreed. The site management statement will be attached to the construction method statement for the works to ensure that it is brought to the attention of all site staff. The Site Management Statement will be briefed out to all site based staff as a toolbox talk.

- **Monitoring proposals that shall include:**
  - The receptors for which monitoring will be undertaken;
  - Frequency of monitoring;
  - Factors against which the monitoring results will be analysed;
  - Threshold levels;

- Timescales within which results will be analysed;
- List of organisations/individuals to whom results will be distributed; and
- Actions to be taken in the event that thresholds are breached.

17.3.5 Permits to Work

Prior to being granted access to commence construction works, the Infraco shall complete and submit to **tie** for its autorisation, the required Permits to Work.

Further details of the Permits to Work process are included within the Code of Construction Practice, the Project Safety & Quality Interface Document and Section 39 of the Employer's Requirements.

18 Cabling and Ducting

This Section sets out the requirements with the Infraco must comply with in relation to cabling and ducting.

18.1 Cabling

All cables must be mechanically protected such that they cannot be accessed by the public without using tools to remove separate mechanical protection.

Cables and associated supports must be rated such that neither the cables nor the supports degrade due to thermal or mechanical stress during their design life.

Cables must operate satisfactorily under all foreseeable fault, and loading conditions.

Cables must operate satisfactorily under all foreseeable environmental conditions. This must include the effects of sunlight, dampness, temperature, and exposure to water. Cables must be selected to recognise risk that they may be submerged in water.

Cables must be designed to last for the durations that are set out in Table 22 - Equipment Design Life.

Cable terminations must not impose any stress on the cables, and sufficient spare length must be provided in all cables to permit foreseeable maintenance and repair work.

Cables must be identified in accordance with requirements agreed with **tie**.

Where joints in cables are required, and cannot be reasonably avoided, they must be located in draw pits and identified on the as-built drawings. Joints in draw pits must be both suitably supported and accessible. This may require draw pits that are larger than normal size to be used to contain cable joints.

All cables in all draw pits will be identified with a suitable label.

18.2 Ducts

Spare ducts shall be provided on all duct routes as follows:

Number of ducts in cable route	Minimum number of spare (unused) ducts	Minimum size of spare duct
2	0	N/A
3 or more	20% of the number of ducts	Maximum size of used ducts

Table 42 – Ducts

All ducts, and all individual ducts in banks of ducts, must contain draw ropes of sufficient mechanical integrity to enable additional new or replacement cables to be pulled through the duct.

All ducts, including ducts that are installed but not used for cables, must be free from debris and free from obstructions.

All installed ducts, including ducts that are installed but not used for cables, must not be crushed. All internal dimensions of the duct as built must never less than 90% of duct's nominal dimensions.

Ducts must be provided with drainage that is integrated with the specification of the cables used such that there is no foreseeable risk of degradation from any water that may be in the ducting system.

Ducts must be of sufficient mechanical integrity to protect both themselves and the cables contained in the ducts from all foreseeable damage, degradation and vandalism.

The bending radii of ducts must be integrated with the requirements of the cables to be installed such that the cables can be installed, replaced and terminated without damage.

Ducts must be provided in sufficient number and size to ensure that there is no degradation in the cables due to thermal effects or chafing of cables. It shall be possible to remove and replace any individual cable in the ducting system without the need to remove or significantly disturb any other cables from the system.

Cable ducts shall be installed with appropriate warning arrangement to anyone who may be undertaking excavation work that may damage the ducts. This may be achieved by the installation of plastic warning tape in the ground above the ducts.

Where cables are installed in segregated parts of the tramway, they shall not be installed in cable troughs unless specifically agreed by **tie**. Any proposals for the use of cable troughs must include:

- Locked lids or equivalent to minimise the risk of vandalism and/or theft;
- Where cable troughs form part of the walkway along the tram route, a proven design of locked lids that will eliminate any rocking of the lids must be used; and
- Troughs must be secured against any lateral movement.

For the avoidance of doubt, where cable troughs form part of a structure, the above requirements still apply.

Where ducts are used on the off street tramway, these are preferred to be placed under the walkway with draw pit covers forming part of the walkway.

Any slipping and/or tripping hazards associated with draw pits that are located in a walkway must be eliminated.

Some cables terminate in equipment on ballasted track. These include:

- traction return bonding connected to the rails;
- connections to loops; and
- possibly some connections to some Point Position Indicators.

These cables are to be installed such that the risk of damage to the cables due the activities of track maintenance equipment, vandalism and people walking on the track is minimised.

18.3 Duct Chambers and Draw pits

Duct chambers must be structurally sound and built to the requirements of the cabling network as specified in this section 18.

The design of the location of draw pits must such that they can be safely accessed without stopping the operation of the tramway or requiring a road closure, unless specifically agreed by **tie**.

The integration of draw pit covers into the surfacing in the surrounding area shall be included in the design. This will include the orientation and the surfacing of the cover.

Draw pit covers will be of a family, such that the number of different keys needed to lift draw pit covers is minimised.

The Infraco shall provide sufficient draw pit keys and access equipment to adequately operate and maintain the system.

18.4 Cable separation

Sufficient separation between cables must be provided in order to:

- ensure that any risk of damage to the insulation of the cables that could cause potential risks of energising other circuits is minimised. All cables carrying +750V dc must not be in physical contact with any other cables unless the cables are permanently bonded together,
- ensure that electromagnetic compatibility between cables is provided, and
- permit access to cables and any essential cable joints for maintenance purposes

18.5 Other requirements

Where cables are installed inside conducting items that are not earthed, such as OLE poles, the insulation and the mechanical protection of the cables must be sufficient to mitigate any associated hazards.

As built drawings will accurately identify:

- the cables that are contained in each duct, to aid cable location and fault finding; and
- the location of all draw pits and all duct runs.

19 Cabinets

This Section 19 sets out the requirements which the Infraco must comply with in relation to cabinets and the environmental conditions as defined in Section 3.6.4.

Cabinets, cubicles and equipment housings will be required in the following instances as a minimum:

- To house communications equipments at the Tramstops;
- To house SCADA equipment within substations;
- To house radio equipment at base stations; and
- To house points control, points indicator control, points heaters and Tram control equipment at rail junctions.

All cabinets that are located externally shall meet the following requirements:

- They shall provide an ingress protection rating of 55 (BS EN 60529 Specification for Degrees of Protection Provided by Enclosures) as a minimum;
- They shall be coated with materials that inhibit graffiti and assist with its removal;
- Equipment housing, enclosures, cable routes etc. shall allow for an increase of temperature caused by the equipment, whereby the housing itself shall not cause any harm to the functionality of the equipment or the temperature reached at the surface of the enclosure
- All cabinets shall provide an entry for cabling, with no cables visible or accessible without opening the cabinet;
- All cabinets are provided with a robust lock, satisfying the **tie** lock suiting requirements set out in these Employer's Requirements;
- The cabinet doors shall be equipped with a multi point locking mechanism that complies with the Edinburgh Tram Network security locking policy;
- In the event of the equipment cabinets being opened, an alarm shall be transmitted to the Supervisory Control and Data Acquisition system so that staff in the Control Centre can be alerted;

- The equipment contained within the cabinets shall be of a modular construction that shall allow rapid replacement should that become necessary;

- When the cabinet doors are open, they do not obstruct tramway operation, road vehicles, passengers or other members of the public; and

- Work can be carried out safely on the contents without affecting tramway operations or requiring temporary traffic management.

In addition, those cabinets located at Tramstops shall be designed to integrate visually with the Tramstop furniture. The external colour and appearance of the cabinets, shall match and complement the architectural finishes and materials of the structures of the Tramstop where the cabinet is to be mounted.

20 NOT USED

21 Utilities / MUDFA

Where Infraco is instructed by a **tie** Change to carry out utilities diversions, relocation or protective works to deliver the Edinburgh Tram Network the following shall apply.

The philosophy adopted for the MUDFA Works is to clear the ground of utilities such that the track can be installed in ground that has no live utilities within it. The MUDFA Works considers utilities that lie below the area of land that is described by the tram's DKE. It is assumed that the width of ground needed for the construction of the track slab is no more than the width of the tram's DKE.

Where utilities lie below 1200mm from the surface, they are left in-situ.

Where utilities occupy ground that is within 600mm of the existing road surface, they are removed and replaced.

Where utilities lie between these two limits, they are considered on a case by case basis. Generally, utilities that cross the tramway are protected (sleeved for example) and left in position. Where utilities run along the tramway, they are diverted and placed outside the tram's DKE.

Special arrangements are made for major utilities such as the HV cables and the service tunnel along Leith Walk.

Schedule 46 details specific locations and utility types which shall be either left in situ or be diverted by Infraco as a **tie** Change. Where utilities' scope decisions and responsibilities fall outside this schedule Infraco and tie shall jointly agree the most appropriate party (either MUDFA or Infraco) to undertake the diversion works.

The generic allocation of responsibility for relocating utilities is set out in Section 21 of these Employers Requirements. Infraco will only be responsible for relocating such utilities after receiving a **tie** Notice of Change instructing such relocation.

Tie will obtain designs for all utility diversion works and issue them to Infraco.

Infraco shall deliver the utilities diversion works instructed in accordance with designs provided.

Infraco shall ensure that the Programme as amended in accordance with Clause 80 contains adequate allowance for these utility diversion works.

Infraco responsibilities in respect of utilities diversions instructed as a **tie Change** shall also include:

1. Where diversion works are to be delivered by Statutory Utilities (SUs) supporting tie in the development and agreement of utilities diversions works package agreements with the SUCs. Such support mean supporting tie and providing all necessary information to enable tie to negotiate contracts for diversion works with SUCs, assembling and checking work package agreements, defining detailed scope, providing constructability advice and agreeing programme of works with SUC's and co coordinating such so that impact on programme for delivery of the Infraco Works is minimised, agreeing construction and delivery methodologies with SUCs, finalising the scope of Utilities diversion works and the boundary of responsibility between work to be delivered by Infraco and that of SUCs.
2. Providing all enabling, traffic management requirements, ancillary building, civil engineering, electrical and mechanical works in connection and all attendances required to enable SUCs to carry out and complete their works.
3. Coordinate the works of SUCs with each other and with that of the Infraco.

Service	Description	MUDFA SCOPE	INFRACO SCOPE	NOTES

Service	Description	MUDFA SCOPE	INFRACO SCOPE	NOTES
Water	Connections	Connections to new mains will be required before old main can be decommissioned. This is part of the advance diversion scope of MUDFA.	If any connections are missed by MUDFA and subsequently identified by Infraco, they must be carried out at the time of Infraco. However, this risk is small as missed connections would usually lead to immediate customer complaints when the old service was decommissioned.	Note that this is not intended to be the primary mitigation of this risk: site investigation and planning should ensure that connections are identified and dealt with by MUDFA.
	Diversion (other than 800mm at Depot)	Part of the advance diversion scope of MUDFA.	If any apparatus is discovered by Infraco that was not identified at the time of the utility advance diversion works, the diversion must be carried out by (or at the same time as) Infraco. Extensive site investigation has been carried out to reduce this risk, but it cannot practically be eliminated.	
	Diversion of 800mm at Gogar Depot.	Part of the advance diversion scope of MUDFA.	If any apparatus is discovered by Infraco that was not identified at the time of the utility advance diversion works, the diversion must be carried out by (or at the same time as) Infraco.	There is little, if any, risk of encountering any other water service in the Gogar Depot area that has not been dealt with by MUDFA.
	External Protection	Part of the advance diversion scope of MUDFA.		Long longitudinal protection would not be acceptable for water mains

Service	Description	MUDFA SCOPE	INFRACO SCOPE	NOTES
	Insurance Pipes	Part of the advance diversion scope of MUDFA.		

Service	Description	MUDFA SCOPE	INFRACO SCOPE	NOTES
Waste water	Diversions and manhole construction	Part of the advance diversion scope of MUDFA.	If any apparatus is discovered by Infraco that was not identified at the time of the utility advance diversion works, or where the designs of works have been unable to be sufficiently progressed prior to MUDFA vacating the Work Sections, the diversions must be carried out by (or at the same time as) Infraco. Extensive site investigation has been / will be carried out to reduce this risk, but it cannot practically be eliminated.	Sewer design and agreement with SUC (Scottish Water) regarding treatment required to existing sewers is not currently complete and the programmed completion of the telecoms cabling works is such that existing services cannot be abandoned to allow the manhole and sewer construction works to be undertaken for significant periods of time after all the ducts and other utility diversions are complete. This may result in sewer diversion works to be undertaken after all other MUDFA programmed works in Work Sections are complete. Works may be undertaken by either MUDFA or Infraco.

Service	Description	MUDFA SCOPE	INFRACO SCOPE	NOTES
	Internal Refurbishment	Part of the advance diversion scope of MUDFA.		
	External protection	Where crossing or short longitudinal - part of the advance diversion scope of MUDFA.	Where long longitudinal: would be relatively easy to incorporate into Infraco - for a section, excavation would be deeper with (e.g.) concrete placed - this would avoid double excavation by MUDFA and Infraco.	
	Connections to new sewers	Connections to new mains will be required before old main can be decommissioned. This is part of the advance diversion scope of MUDFA.	If any connections are missed by MUDFA and subsequently identified by Infraco, they must be carried out at the time of Infraco. However, this risk is small as missed connections would usually lead to immediate customer complaints or evidence of flooding when the old service was decommissioned.	This is not intended to be the primary mitigation of this risk: site investigation and planning should ensure that connections are identified and dealt with by MUDFA.
	Existing connections	An existing connection to an existing (and left in place) sewer may have to be repositioned. This would be part of the advance diversion scope of MUDFA.	A connection may not be identified at the time of MUDFA, and uncovered by Infraco. The connection must be repositioned at the time of Infraco.	

Service	Description	MUDFA SCOPE	INFRACO SCOPE	NOTES
	Manhole access level change (eg raise height of access cover)	St Andrews Square and North & South St Davids Street will be undertaken by MUDFA as part of the road realignment and construction works required to accommodate the proposed Traffic Regulation Order (TRO).	Manhole access level changes must be adjusted at the time of Infraco. Manhole lids to be flush with the finished road surface.	It will also mean that new manholes installed by MUDFA may have to be modified by Infraco.
	New Gully connections	St Andrews Square and North & South St Davids Street will be undertaken by MUDFA as part of the road realignment and construction works required to accommodate the proposed Traffic Regulation Order (TRO).	Infraco shall install road gulleys. These will have to be installed at the same time as the road construction is carried out.	If a new road gully is required at a place where the road level is not to be changed, MUDFA could install it. However this situation is unlikely, and for consistency and avoidance of confusion Infraco should probably do all of this.

Service	Description	MUDFA SCOPE	INFRACO SCOPE	NOTES
Telecoms	Protect	Where crossing or short longitudinal - part of the advance diversion scope of MUDFA. Where long longitudinal: would be part of the advance diversion scope of MUDFA allowing Infraco a "clear run". However would necessitate double - excavation of a long length of the tram foundation area.		Where long longitudinal: would be relatively easy to incorporate into Infraco - for a section, excavation would be deeper with (e.g.) concrete placed - this would avoid double excavation by MUDFA and Infraco*.
	Slew/Lower	Part of the advance diversion scope of MUDFA.	If any apparatus is discovered by Infraco that was not identified at the time of the utility advance diversion works, the diversion must be carried out as Infraco Works. Extensive site investigation has been carried out to reduce this risk, but it cannot practically be eliminated.	

Service	Description	MUDFA SCOPE	INFRACO SCOPE	NOTES
	Divert (inc manhole construction)	Part of the advance diversion scope of MUDFA.	If any apparatus is discovered by Infraco that was not identified at the time of the utility advance diversion works, the diversion must be carried out as Infraco Works. Extensive site investigation has been carried out to reduce this risk, but it cannot practically be eliminated.	
	Insurance Ducts	Part of the advance diversion scope of MUDFA.		
	Manhole access level change (eg raise height of access cover)	St Andrews Square and North & South St Davids Street will be undertaken by MUDFA as part of the road realignment and construction works required to accommodate the proposed Traffic Regulation Order (TRO).	Manhole access level changes must be adjusted at the time of Infraco. Manhole lids to be flush with the finished road surface.	This will also mean that new manholes installed by MUDFA may have to be modified by Infraco.

Service	Description	MUDFA SCOPE	INFRACO SCOPE	NOTES
Gas	Divert	Part of the advance diversion scope of MUDFA.	If any apparatus is discovered by Infraco that was not identified at the time of the utility advance diversion works, the diversion must be carried out as Infraco Works. Extensive site investigation has been carried out to reduce this risk, but it cannot practically be eliminated.	
	Protect	Part of the advance diversion scope of MUDFA.		Long longitudinal protection would not be acceptable for gas mains
	Insurance Pipes	Part of the advance diversion scope of MUDFA.		
	Connections	Connections to new mains will be required before old main can be decommissioned. This is part of the primary scope of MUDFA.	If any connections are missed by MUDFA and subsequently identified by Infraco, they must be carried out as part of Infraco Works. However, this risk is small as missed connections would usually lead to immediate customer complaints when the old service was decommissioned.	This is not intended to be the primary mitigation of this risk: site investigation and planning should ensure that connections are identified and dealt with by MUDFA.

Service	Description	MUDFA SCOPE	INFRACO SCOPE	NOTES
Electricity	Divert	Part of the advance diversion scope of MUDFA.	If any apparatus is discovered by Infraco that was not identified at the time of the utility advance diversion works, the diversion must be carried out as part of Infraco Works. Extensive site investigation has been / will be carried out to reduce this risk, but it cannot practically be eliminated.	
	Protect	Where crossing or short longitudinal - part of the advance diversion scope of MUDFA.	Where long longitudinal: would be relatively easy to incorporate into Infraco - for a section, excavation would be deeper with (e.g.) concrete placed - this would avoid double excavation by MUDFA and Infraco.	Where long longitudinal: would be part of the advance diversion scope of MUDFA allowing Infraco a "clear run". However would necessitate double - excavation of a long length of the tram foundation area.
	Insurance ducts	Part of the advance diversion scope of MUDFA.		

Service	Description	MUDFA SCOPE	INFRACO SCOPE	NOTES
	Domestic + Business connections	Connections to new cables will be required before old cable can be decommissioned. This is part of the primary scope of MUDFA.	If any connections are missed by MUDFA and subsequently identified by Infraco, they must be carried out as part of Infraco Works. However, this risk is small as missed connections would usually lead to immediate customer complaints when the old service was decommissioned.	This is not intended to be the primary mitigation of this risk: site investigation and planning should ensure that connections are identified and dealt with by MUDFA.
Street Furniture (eg street lighting, traffic lights, lighted bollards, bus stops, etc)	Existing power & telecoms Divert	St Andrews Square and North & South St Davids Street will be undertaken by MUDFA as part of the road realignment and construction works required to accommodate the proposed Traffic Regulation Order (TRO).	All existing power and telecoms diversions required must be carried out by (or at the same time as) Infraco. Depth of cover and the final road infrastructure alignment and construction to be finalised by and carried out by Infraco.	Extensive site investigation has been / will be carried out to reduce this risk, but it cannot practically be eliminated.
	Protect	St Andrews Square and North & South St Davids Street will be undertaken by MUDFA as part of the road realignment and construction works required to accommodate the proposed Traffic Regulation Order (TRO).	All existing power and telecoms diversions required must be carried out by (or at the same time as) Infraco. Depth of cover and the final road infrastructure alignment and construction to be finalised by and carried out by Infraco.	.

Service	Description	MUDFA SCOPE	INFRACO SCOPE	NOTES
	New connections	For future street furniture, appropriate ducting would be installed by MUDFA where (1) design details are available sufficiently in advance, (2) the road/tram alignment is formally finalised and (3) the future ground levels are such that new ducts can be buried beneath the existing ground level, without either excessively deep excavation or inadequate (or no) cover.	Where design is not available in time for MUDFA, or where future road levels do not facilitate advance installation, duct installation work must be carried out as part of Infraco Works.	
Other	SP transmission cables	If the design agreed with Scottish Power requires external protection beyond that provided by the track slab in that area, and if the design is available in good time, then MUDFA could undertake these works if required.	Infrastructure design will have to take account of the specific requirements to avoid diverting these cables. This will include special track slab construction (for Leith Walk) and careful bridge abutment/pier design (for 3 other areas). Should this design be impossible, the diversion work would be carried out by Scottish Power directly.	This would not be possible before 2008 (at the time of writing; lead time requires a notification before October in one year for work in the summer of the following year). Consultation between utilities and infrastructure design teams should facilitate this design.

Service	Description	MUDFA SCOPE	INFRACO SCOPE	NOTES
	BT cables at A8 by Gogar		Infrastructure designs shall take account of the specific requirements to avoid diverting these cables.	This may include a deeper excavation for the tunnel under the A8 than had previously been envisaged, plus provision of temporary support for the cables during the construction of the tunnel. Should this design be impossible, the diversion work would be carried out under MUDFA terms and conditions. Consultation between utilities and infrastructure design teams should facilitate this design. Trial holes have been undertaken on behalf of BT to confirm the depth of the existing cables – the initial, informal, impression from BT is the cables are higher than anticipated which indicates the cables may not require diversion but incorporation into the infrastructure design.

Service	Description	MUDFA SCOPE	INFRACO SCOPE	NOTES
	BT cables at Roseburn street		Infrastructure design will have to take account of the specific requirements to accommodate these cables. Infraco shall consider the design solution for cabling installation as part of the Infraco Works.	This will include careful bridge abutment/pier design. The cabling element of this work is to be carried out by BT following diversion works, and may impact on the Infraco programme. Consultation between utilities and infrastructure design teams should facilitate this design. Note: a design solution for the cables as part of the Infraco works has been agreed with BT.
	Utility work dependent on prior structures work, eg cables in bridge decks		Will require structures work to be completed before utility work can be started. Infraco shall complete any and all utility diversions, utility protections works etc. including design (by SDS) following (or at the same time as) the Structures are completed.	

Table 42a – Table showing the responsibility for diversion/protection work on the utilities for the Edinburgh Tram project

22 Locks and Key Suiting

22.1 General

The Edinburgh Tram Network will have many locks installed to provide a suitable level of secure access to equipment and rooms. The locks and keys used shall be integrated into appropriate key suiting families. The philosophy is to strike an appropriate balance between the following two extremes:

- A single fully integrated key suiting arrangement for the whole of the Edinburgh Tram Network;
- No suiting, with every lock needing a different key;

The Infraco shall propose key suiting arrangements that are subject to approval by **tie**. In developing the proposals, Infraco shall consider:

- The need for staff to be able to undertake their duties without having to carry large numbers of keys with then to access the places that their duties require;
- Future expansion of the Edinburgh Tram Network;
- Changes to the key suiting that are likely to be needed as the system matures, and any key suiting must bear be sufficiently flexible to enable such changes to be made; and
- The ongoing costs of providing keys to staff during the life of the Edinburgh Tram Network;

22.2 Key Suiting System

A key suiting system that is based by the Infraco on the following is likely to be acceptable to **tie**.

A stand alone suite of keys, hierarchically structured to provide access to equipment such as:

The suiting documentation will list all locks to be installed on the Edinburgh Tram Network, including any locks that are not proposed to be included in the suites. There should be 4 completely separate suiting systems, as set out below:

22.2.1 Tram

- The Infraco shall procure all keys that are required for operating each tram. It is anticipated that each tram driver will need to carry no more than two keys for each Tram in order to undertake their duties. One key would permit access onto the tram, into the cab, and enable the Tram to be driven. The second key would open any panels that the driver may need to access and may also provide for such tasks as locking doors out of use;

- A different key would permit staff such as cleaners to access the inside of the Tram and the Tram cabs, but would not enable the Tram to be driven;

- Tram Maintenance staff may also need additional keys to access sensitive or potentially dangerous equipment.

22.2.2 Substations and Power

A stand alone suite of keys, hierarchically structured to provide access to equipment such as:

- Isolator cabinets, to check the position of isolators and to fit isolation padlocks;

- Substation LV areas;

- Substation HV areas in substations;

- Isolators, to permit hand operation;

- Equipment within the substations may also have a multitude of locks that may be suited, depending on the Infraco maintenance philosophy.

Separate individual locks with a single key will be used for securing isolations. There will be no suiting whatsoever for these.

22.2.3 Depot and buildings

A stand alone suite of keys, hierarchically structured to provide access at doors in the Depot building and other buildings in the Depot area such as the Depot plant building. A low level key in this structure could be used for any trackside gates that are required along the alignment.

22.2.4 Signalling and Communication Equipment

A stand alone suite of keys, hierarchically structured, to provide access to all trackside cabinets, including:

- Points control;
- Points heating;
- Signalling and;
- Tramstop.

Isolator cabinets are substations are excluded from this suite because they are included in the substations and power suite of keys.

23 Testing and Commissioning

23.1 Systems Acceptance

23.1.1 Scope

This section of the Employer's Requirements is to define the systems acceptance requirements applicable to the Edinburgh Tram Network (ETN) which the Infraco must comply with.

23.1.2 General Description and Principles

The process for acceptance of the Edinburgh Tram Network set out in this document is designed to ensure that the ETN is delivered in an acceptably safe, compliant, and efficient manner. The objectives of the process are to ensure that system performance, integrity, reliability, availability, and safety are rigorously tested and that throughout all stages of the delivery process the many sub-systems and the overall System are validated and verified against **tie**'s requirements and applicable standards. The detailed sequence and scope of infrastructure testing and commissioning prior to System Acceptance Testing shall be programmed out and proposed by the Infraco.

The acceptance process is heavily dependent on the delivery of the planned service timetables, the Operational Timetable (see 2.8 of these Employer's Requirements) and the Enhanced Timetable (see 2.8 of these Employer's Requirements). Details regarding the tram service frequency, number of trams and the phased opening of the Edinburgh Tram Network are contained in 2.8 of these Employer's Requirements.

Pre-system acceptance testing includes both Factory Acceptance Tests (FATs), Site Acceptance Tests (SATs), Sub-system Integration Tests (SITs) and System Commissioning Tests (SCTs).

Once a Section of the ETN is physically completed and the System Integration Tests are satisfactorily completed then the formal acceptance process requires the Infraco to carry out and pass a series of System Acceptance Tests (SATS) in order to achieve Sectional Completion. These tests are:

Table 43 - Description of the Acceptance Tests

Test	Test Name	Test Description	Programme
T1	Post Commissioning Test	The test shall demonstrate and prove that each Section of the ETN in sequence is able to perform in an acceptably safe manner and deliver the required run times. Please refer to relevant section below. This is the gateway test to driver training.	Post Commissioning Test will immediately follow the successful commissioning of the nominated section and is a requirement for progressing into the Driver Training.
T2	Performance Test 1	After Section D has passed Test T1 then this test shall demonstrate and prove that Phase 1a of the ETN is able to perform satisfactorily to move into the three-month Shadow Running period. Please refer to relevant section below. This is the gateway test to shadow running.	Performance Test 1 will immediately preceed the Shadow Running period and is a requirement for progressing to this phase of the programme.
T3	Pre-operations Test	The test shall cover a seven day period during the latter part of the Shadow Running phase of the programme. The Test is the operation of the initial entry into service timetable and includes infrastructure, trams, and operations systems – Please refer to relevant section below.	Pre-operations Test shall immediately precede the Service Commencement Date.
T4	Network Performance Test	The Test shall be carried out over a 28 day period in Passenger Service to establish that the ETN can reliably operate the Operational Timetable – please refer to Please refer to relevant section below.	To be completed within twelve months of the Service Commencement Date.
T5	Network Reliability Test	Reliability Testing of certain sub-systems in Passenger Service – please	To be completed within twelve months of the Service

		refer to Please refer to relevant section below.	Commencement Date.

The Post Commissioning Test (T1), Performance Test 1 (T2) and Pre-operations Test (T3) have to be passed before the Edinburgh Tram Network (or Sections thereof) can open for passenger carrying service and are therefore to be scheduled during the test running and driver training and shadow running phases.

The Post Commissioning Tests (T1) can be undertaken in isolation for each Section.

Performance Test 1 (T2) and the Pre-operations Test (T3) can only be undertaken for that/those section(s) that are to be opened for passenger carrying service immediately thereafter.

The Network Performance (T4) and Network Reliability Test (T5) shall not be carried out until Passenger carrying Service has commenced on the whole Edinburgh Tram Network.

The figure on the next page shows the structure of the tests.

Figure 10 - Edinburgh Tram Network: Extract from System Life Cycle Model

Stage	Flow Chart	Tests	Description
8	Passenger Service	Network Performance (T4) and Reliability Test (T5)	The date upon which the Edinburgh Tram Network starts in public service
			PASSENGER SERVICE COMMENCEMENT
7	Shadow Running	Pre-Operations Test (T3)	The period of Tram operations that simulates full public service operation including running to published timetable and calling / dwelling at Tramstops before the ETN enters public service
		Performance Test 1 (T2)	ENERGISATION OF COMPLETED PHASE OF THE ETN
6	Test Running & Driver Familiarisation		The period post-ETN commissioning used to complete driver and control room staff training and gain confidence to enter Shadow Running Phase
		Post-Commissioning Test (T1)	
5	Commissioning	System Integration Test	All subsystems, including the tram, are fully-integrated to form the ETN and are tested to demonstrate that they work together successfully and meet the Employer's Requirements
			ENERGISATION OF SECTION OF THE ETN
4	Set to Work Tests	Site Tests	The point at which subsystems have been installed and then tested to prove they meet their requirements with both Type tests and Site Acceptance tests
			LIMITED ENERGISATION OF PART OF THE ETN
3	Installation / Construction		Once the subsystem has successfully passed Factory Acceptance Tests installation / construction at site will take place and as appropriate a delivery test undertaken.
2	Factory Acceptance Tests	FAT	Thorough demonstrable testing of the subsystem at Infraco's premises
1	Build / Manufacture		Manufacture and assembly of the System by the Infraco
D	Design		The scope of the works designed through Approval in Principle and Approved for Construction & Manufacturing Drawings; with associated verification and validation test and integration plans complete

23.2 Test Planning

The efficient programming of the tests is vital to the success of the system acceptance test process. Infraco shall, therefore, consider and incorporate, in a coordinated manner at each stage of the implementation of this process, the relevant documentation, the required tram availability and commissioning site availability and staff (from all concerned parties), into the overall Infraco test plan.

The Infraco shall prepare and present the Infraco test plan for review no later than six months after the Effective Date. The Infraco test plan shall describe how the Factory Acceptance Testing, Site Testing and Commissioning, Test Running and Driver Training and Shadow Running, as well as the Network Performance and Network Reliability tests are to be undertaken. The definition of these tests is shown in Figure 10. The programming of the tests shall be in accordance with the Programme as described in Section 39 of these Employer's Requirements. Infraco shall ensure that the PSCC and the Independent Competent Person (or the appropriate approval regime in force) are satisfied that the testing process is robust, comprehensive and satisfies all of the safety issues legislated and mandated for the system.

As the project evolves the Infraco Test Plan/Risk Register/Hazard Log shall be maintained by the Infraco. Infraco shall demonstrate that the issues raised in this log have been mitigated or that the tests have demonstrated the risk has been resolved. It is therefore important that the testing procedures and results are correlated with the Project Risk Register and Hazard Log.

23.3 Pre-Systems Acceptance Testing (before starting the systems acceptance process)

The following should be noted with regards to any tests to be undertaken:

- The individual test documentation / specifications shall be submitted to **tie** for acceptance in accordance with Schedule 14 (Review Procedure) and **tie**'s approval obtained before the test can take place;

- A notice period of at least seven working days shall be given to **tie** prior to any test in order that **tie**, and/or its representative(s), can arrange, at their option, to witness the test. The Operator's staff shall also be invited to witness all testing activities;

- Factory Acceptance Tests (FAT) and Site Acceptance Tests (SAT) test results shall be submitted to **tie** for review;

- **tie** reserves the right to be present during any of the tests to be undertaken; and
- Any such review will be undertaken in accordance with Schedule 14 (Review Procedure).

The following tests shall be carried out in advance of the systems acceptance testing sequence.

23.4 Factory Acceptance Tests (FAT)

23.4.1 Overview

Factory Acceptance Tests consist of a series of progressive activities all of which are undertaken at the sub-system manufacturer's premises.

Initial testing at the component manufacturer's premises of components to be used as part of a sub-system shall be undertaken to verify that the components behave as predicted in the design and satisfies the Employer's Requirements for that component.

Initial testing undertaken at the manufacturer's premises shall be undertaken to verify that the sub-system **or** component behaves as predicted in the design and meets the requirements of the design specification and provides correct functionality.

Once sub-systems or components have been successfully tested they shall be incrementally integrated and tested to verify that the sub-systems behave as predicted in the design and meet the requirements of the design specification and provide correct functionality.

Part of the FATs are first article inspections or type tests. These shall be undertaken on the first production item. This inspection shall verify that the Quality and functionality of the product is acceptable and that the manufacturers' quality control processes and procedures have been implemented.

The test specification(s) shall be produced by Infraco and shall be subject to acceptance in accordance with the Review Procedure. **tie** agreement to all proposed component, sub-system and Factory Acceptance Test specifications is required at least ten business days prior to the date of the component, sub-system and FAT tests identified above and any additional tests required by Infraco.

23.4.2 Pass Criteria

FAT testing shall demonstrate that the individual sub-systems or components and equipment fully meet the requirements and are suitable for the subsequent release from the factory environment, delivery to site and installation.

FATs demonstrate the integration of the modules and sub-systems under factory conditions and their reliable operation under cyclical testing.

As far as applicable the FAT will demonstrate that the sub-system or components has been successfully exercised through simulation, including a demonstration on how the alarm handling manages the worst case alarm flood. This test will be subject to **tie** approval.

23.5 Site Tests

23.5.1 Overview

The objective of site tests is to demonstrate that:

(a) Construction/installation activities have been completed correctly by demonstrating that the design specification and functionality of these Employer's Requirements have been achieved;

(b) The sub-systems, in isolation and before passengers are carried, function and behave at site as designed and tested in the FAT;

(c) The infrastructure sub-systems and the tram will then be integrated with each other insofar as is possible to prove that they collectively function and behave at Site as designed and tested in the FAT; and

(d) The ETN functions and behaves at Site as designed and tested in the FAT. This is defined as system commissioning tests and involves the integration of the infrastructure sub-systems and the tram.

The Independent Competent Person as defined under the ROGS Regulations, other regulatory bodies and the PSCC shall need to be satisfied that the ETN is safe to operate before commencement of system commissioning activities. In order to verify this it shall be necessary for the Infraco to address the issues raised by the Independent Competent Person, PSCC, HMRI (or the appropriate approval regime in force) and Approval Bodies. This may necessitate defining specific tests or incorporating additional Network Performance Test details into the suite of verification commissioning tests. Often the areas of interest to these bodies do not become clear until the majority of issues on the risk register and hazard log have been closed out. Typically these may include items such as:

- pedestrian collision, and the risk of a person being "run over " by a tram;
- gauging and possible entrapment of people in pedestrian areas;
- failed tram recovery;
- control room operational procedures; and
- Recovery from derailments, including rerailing a tram.

It is assumed that **tie** shall procure all electrical power and that a supply is available for the complete on site test procedures until commencement of passenger service.

23.6 Sub-system Integration Tests (SIT)

23.6.1 Overview

Sub-system Integration Tests cover items 23.5.1 of these Employer's Requirements. They shall be undertaken on Sections.

The Infraco shall produce the suite of SIT testing specifications for acceptance by **tie** no later than three months prior to the commencement of the tests through the Review Procedure.

23.6.2 Pass Criteria

The tests are passed when:

- Each sub-system, module or component of the system functions in isolation as designed and does not deviate from FAT results.
- All sub-systems for the given section of tramway are demonstrated to collectively perform in accordance with the operations and performance, and all of these Employer's Requirements.

23.7 System Commissioning and Integration Tests (SCT)

23.7.1 Overview

System Commissioning and Integration Tests shall be undertaken on Sections.

Such activities include the running of tram(s) over section(s) of the Edinburgh Tram Network for which Sub-system Integration Tests have been successfully completed. This will verify that the ETN behaves as predicted and as demonstrated as far as was practical in previous tests.

Infraco shall liaise with both **tie** and the Operator to ensure that sufficient competent operational personnel are available to conduct the required activities, including tram drivers and control room staff.

23.7.2 Pass Criteria

The tests are passed when:

- Each sub-system, module or component of the system functions collectively as designed and do not deviate from FAT results.

All sub-systems for the given section of tramway are demonstrated to collectively perform in accordance with the operations and performance, and all of the Employer's Requirements for a representative number of consecutive passes of a tram in each direction over the given section of the network.

- The integration testing shall include demonstrating that the control room systems and control centre equipment connected to a representative sample of the substation SCADA and other

equipment required for Tramstops can be effectively exercised under a robust simulation of trams progressing around the ETN.

23.8 System Acceptance Activities and System Acceptance Tests

The Infraco shall produce the suite of System Commissioning Test specifications for review by **tie** no later than three months before commencement of the tests. These will be reviewed in accordance with the Review Procedure

23.9 Operations and Maintenance Staff Training

The object of this series of activities is to complete driver, control room and maintenance staff training and provide said staff with greater system familiarisation, demonstrating competence to enter Shadow Running phase upon the passing both of the Post Commissioning and Performance Test 1 (T1 and T2). It therefore forms an integral part of the driver-route familiarisation and training programme.

Staff Training shall achieve the following objectives:

- Enables control room staff to gain experience running a tramway without passenger pressures;
- Allow operational staff to fulfil their duties; and
- Enables the drivers to gain route knowledge and familiarity with the trams and procedures without passenger pressures.

The activities undertaken during this phase are designed to demonstrate confidence in the system performance and system safety by means of passing the post commissioning test and performance test T1, and to gain approval of the Independent Competent Person, PSCC and HMRI. (or the appropriate approval regime in force) to progress to Shadow Running.

Infraco shall liaise with the Operator to undertake careful integration of the operational training programme and testing needs in order to avoid conflicts between operational requirements and the technical validation/verification. These comprise items 4, 5 and 6 of the system commissioning model in Figure 10 – Edinburgh Tram Network –Extract From System Lifecycle Model.

23.10 Shadow Running

The Shadow Running phase will last three months and shall:

- Build and validate the operating pattern up to the Service Commencement Date;
- Carry out any further emergency exercises;
- Demonstrate that the ETN can be safely operated in a routine manner and can recover from emergency situations and emerging perturbations;
- Resolve any issues in respect of operating practices;
- Demonstrate that reliability growth is being monitored and corrective action taken as necessary;
- Allow mileage accumulation to be carried out on the trams;
- Permit infrastructure and tram maintenance staff to familiarise themselves with the procedures, practices and operations regimes and to demonstrate competence development;
- Ensure experience is gained in the gathering and evaluation of the performance monitoring regime data in accordance with Schedule 7 of this Agreement; and
- Allow minor adjustments and tuning of systems.

This comprises item 7 of the system commissioning Model in Figure 10 – Edinburgh Tram Network – Extract From System Lifecycle Model.

The evaluation of Shadow Running is the pre-operations test (T3), the passing of which is the gateway to moving into operation, provided all necessary HMRI (or the appropriate approval regime in force) consents are obtained.

23.11 Final System Acceptance Tests in the Operations and Maintenance Phase

Within twelve months of opening the ETN to passenger service Infraco shall undertake and pass the Network Performance (T4) and Network Reliability Test (T5) (as described in Sections 23.16 and 23.17).

23.12 Emergency Exercises

The Infraco and the Operator shall prepare a plan for review by tie and the Competent Person and following approval of the plan, the Operator shall perform with support from the Infraco a series of exercises with the emergency services and other stakeholders such as Network Rail and BAA. The planning for these exercises will require close liaison by the Infraco and the Operator with the various emergency services. They will be planned to take place in the commissioning period, test running or in the shadow running phase. The nature of the exercises will require detailed planning with Fire, Police, and Ambulance services but are likely to include, as a minimum:

- A simulated road traffic accident at a major road junction;
- A major tram collision/derailment including emergency isolations; and
- A rescue of persons trapped underneath a tram.

23.13 Post Commissioning Test Specification – T1

This sub-section sets out the Performance Test assumptions applicable to all Performance Tests. Should the Infraco be able to prove to the reasonable satisfaction of **tie**'s Representative that any of the Performance Test pass criteria have been exceeded by reason of a Performance exclusion then the test results will be amended to discount the effects of such Performance Test exclusions.

The following exclusions shall apply:

- Operator staff in the Control Room causing or significantly contributing to delays in the operation of the System;
- Failure to provide the correct number of trained Tram Drivers as defined in the DPOFA save where the failure is as a result of the Infraco's own failure in respect of its own obligations in the Agreement;
- Failure of the Tram Drivers to consistently drive the Trams to good industry practice;
- Failure to procure all electrical power that is required for the operation of the System. Periods when the electrical supply is not available will be discounted from the Test and the test period shall be extended by an equivalent period;

- A failure by the Operator to comply with the relevant parts of the Operations and Maintenance Manuals; and
- Damage caused by the Operator.

However, in no event shall any allowances or relief or Network Performance Test exclusion be granted to the Infraco where any delays or failure to pass the Network Performance Test has been caused or contributed by:

(a) Any default, breach or omission by the Infraco or its subcontractors;

(b) Infraco Defects or Snagging;

(c) Equipment undergoing modification or rectification by the Infraco and;

(d) TRAMCO's failure pursuant to the Tram Maintenance Contract.

The burden of proof shall be on the Infraco to show that such failures of the Operator were caused by reasons for which the Infraco was not responsible and for which the Operator should be properly accountable for by reason of the Operator's default, omission, negligence or breach of statutory duty. The Infraco shall develop and agree audit procedures with **tie**, and the Operator in respect of the Network Performance Test exclusions set out in this paragraph.

Dwell times at Tramstops shall be regulated; as set out in the Employer's Requirements.

23.13.1 Overview of Post Commissioning Test

This section describes the requirements for the Post Commissioning Tests, their execution, monitoring and completion. Post Commissioning Tests form part of the requirements for the final system acceptance.

23.13.2 Test Objectives

This Post Commissioning Test seeks to achieve the following objectives:

Prove that the system is capable of controlling an 'off-street' section of Edinburgh Tram Network in an acceptably safe manner; and

Prove that the system is capable of controlling an 'on-street' section of Edinburgh Tram Network in an acceptably safe manner.

23.13.3 Network Performance Test Description

The Post Commissioning Test is a multi part test, with each part of the test required to be passed in sequence before the entirety of the Post Commissioning Test can be passed. It cannot be conducted until Phase 1a of the Edinburgh Tram Network has been successfully commissioned.

23.13.4 Features

The Infraco shall demonstrate that Gogar Depot and Phase 1a of the Edinburgh Tram Network can be monitored and controlled in accordance with the Case for Safety.

Tests shall provide for:

- Demonstration of the run times as defined below.
- Forty end-to-end tram movements on the nominated section of which twenty are in each direction; and
- Trams will dwell at each Tramstop, and will exercise opening and closing of the doors at each Tramstop, the minimum period of doors being fully opened at each Tramstop will be 13 seconds.

The undertaking of the test shall essentially be an operational function led by Infraco but in conjunction with the Operator. Infraco shall manage the preparation for the tests with technical and maintenance support and monitoring by Infraco (along with representatives from **tie)**.

For the demonstration of run time, the following conditions shall apply:

- Targets of the run time demonstrations shall be developed in accordance with Section 2.12 of the Employers Requirements and agreed between the parties from the agreed maximum journey times and associated assumptions detailed in Section 2.11 of the Employers Requirements during the design phase, as further details of tram performance and traffic lights are available;
- For avoiding of influences due to public traffic, run time demonstrations shall take place during night times only;
- tie will be responsible for the communication with local authorities like CEC, UTC or police;
- run time demonstration to be performed in both directions and shall include the following two demonstrations:
  - run allowing tram priority at each traffic junction along the route
  - run following the regulations and phasing of traffic lights under regular conditions
- Sufficient runs shall be carried out in both directions to provide a level of confidence that the target runtimes have been achieved as agreed in accordance with Section 2.12 of the Employers Requirements.
- Infraco shall undertake and pass the Post Commissioning Test (T1) before proceeding to the Performance Test 1 (T2).

tie shall be given thirty working days advance notice of the finalisation of the Post Commissioning Test plan and seven working days written notice of the Test commencement date.

23.13.5 Pass Criteria

Subject to the exclusions defined in23.13 above, the following shall define the pass criteria for the T1 test.

- All test results from previous tram and system and sub-system tests are to be available and signed off as accepted by **tie**, including all the closed out Snagging Rectification Certificates.
- The test shall have been successfully completed when:
  - At least 95% of the end-to-end tram movements are within the agreed target runtime; and
  - Acceptance of the Case for Safety and test results by the Independent Competent Person and where appropriate Her Majesty's Railway Inspectorate (or the appropriate approval regime in force) and approval or "No Objection to Proceed" respectively for full driver training has been obtained.

23.13.6 Monitoring and Reporting of Test Performance

Appropriate levels of observation by Infraco shall be conducted to satisfy **tie** that the auto-generation of reports from the systems is accurate.

23.14 Performance Test 1 Specification – T2

23.14.1 Overview

This section describes the requirements of Performance Test 1 and the proposals for its execution monitoring and completion. Performance Test 1 forms part of the requirements for the final System Acceptance.

23.14.2 Test Objectives

Performance Test 1 seeks to achieve the following objectives:

- Demonstrate that the Edinburgh Tram Network (or sections thereof) can be operated in an acceptably safe manner;

- Demonstrate that the completed Operator training programme has achieved an adequate competency to proceed in Shadow Running; and

- Demonstrate the mobilisation and competency of the maintenance teams provided by the Infraco.

23.14.3 Network Performance Test Description

Performance Test 1 builds upon Post Commissioning Test and cannot be undertaken until Post Commissioning Test has been passed.

23.14.4 Features

The Infraco shall demonstrate that the Edinburgh Tram Network can start Shadow Running and can be monitored and controlled in accordance with the Case for Safety.

Performance Test 1 shall provide for:

- Operation from 07:00 to 20:00 hrs on three consecutive days (none of which are Saturday, Sunday or Bank Holidays);
- The System will run to the Operational Timetable with headways extended by no more than 50%. For the avoidance of doubt, the trips scheduled for this test are the same as in the Operational Timetable as set out in Sections 2.11 and 2.12 of these Employer's Requirements; and
- Trams shall dwell at each Tramstop and shall exercise opening and closing of the doors at each Tramstop. The minimum period of doors being fully opened shall be 13 seconds at each Tramstop.
- The undertaking of the test shall be an operational function led by Infraco but in conjunction with the Operator. Infraco shall manage the preparation for the Tests with technical and maintenance support and monitoring by Infraco (along with representatives from **tie**).
- Infraco shall undertake and pass Test T2 before proceeding to the Shadow Running phase.
- **tie** shall be given twenty working days advance notice of the Performance Test 1 plan and seven working days written notice of the Test commencement date.

23.14.5 Pass Criteria

The following define the pass criteria for the T2 test.

All test results from previous tram and system and sub-system tests are to be available and signed off as accepted by **tie**. Any Defect Correction lists shall be available and agreed as being programmed to be remedied.

The test shall have been successfully completed when:

- At least 95% of the end-to-end tram movements meet the requirements of the Performance Regime in terms of Punctuality Service Element as defined in 2.16.

- Acceptance of the Case for Safety and test results by the PSCC , the Independent Competent Person and where appropriate Her Majesty's Railway Inspectorate (or relevant approval body) and their approval or 'Letter of No Objection to proceed" into Shadow Running.

23.14.6 Monitoring and Reporting of Test Performance

The primary data used to evaluate the test shall be automatically generated from the Supervisory Control & Communications performance monitoring sub system and validated independently.

23.15 Pre-Operations Test Specification – T3

23.15.1 Overview

This section describes the requirements of the Pre-Operations Test and the proposals for its execution monitoring and completion. The Pre-operations Test shall be conducted during the Shadow Running phase of the project and forms part of the requirements for the final System Acceptance.

23.15.2 Test Objectives

The Pre-operations Test seeks to prove that the Edinburgh Tram Network, or section thereof, in the event of sectional opening operates to a sustained level of performance determined by the Opening Timetable and the performance regime such that:

- The Operator can safely commence passenger carrying revenue earning service;
- The Infrastructure and Tram Maintainers can commence the Planned Maintenance proposed for passenger carrying revenue earning service; and
- The Edinburgh Tram Network passes the ride quality criteria in Tables 62 & 63 of the Employers Requirements.

23.15.3 Network Performance Test Description

Pre-operations Test is a four-part test upon successful completion of all parts of which the Edinburgh Tram Network or section(s) thereof can be opened to public service. The Pre-Operations test cannot be undertaken ahead of the successful completion and passing of the respective Performance Test 1.

23.15.4 Features

The Infraco shall demonstrate that the entire Edinburgh Tram Network or section(s) thereof can be operated to the defined levels of performance, reliability and availability and in accordance with the operational Case for Safety.

The Part 1 test shall comprise:

- Five consecutive days (none of which are Saturday, Sunday or Bank Holidays) of testing in accordance with the Operational Timetable. This test is to be undertaken no sooner than two weeks after commencement of the Shadow Running phase;

The Part 2 test shall comprise:

- Five consecutive days (none of which are Saturday, Sunday or Bank Holidays) of testing in accordance with the Enhanced Timetable, which cannot commence until two weeks from successful completion of the Part 1 test, and must be completed at least two weeks prior to the end of the Shadow Running phase, unless agreed otherwise by **tie**.

For both the Part 1 and Part 2 tests, trams shall dwell at each non-terminus Tramstop for a nominal 25 seconds and the doors shall normally remain closed.

The Part 3 test (which can be undertaken at any time during shadow running) shall comprise:

- One of the fleet of trams shall be selected by **tie** to be instrumented and monitored. The selected tram shall provide results for 100 journeys of the selected tram consecutively over all sections of the ETN;

- Measurement of lateral, longitudinal and vertical accelerations to be taken on the floor of the trailing cab of the tram.

- All tram journeys during the test period that provide data for this test shall be completed within a tolerance of plus or minus 10% of the journey times that are setout in the Operational Timetable;

- Analysis to be performed as follows:

  - For each journey between Tramstops a root mean square average of the combined lateral, longitudinal and vertical accelerations (RSS addition) is to be determined in accordance with ISO 2631.

The Part 4 test shall comprise:

- One tram from the fleet will be loaded to AW0
- Measurement of lateral, longitudinal and vertical accelerations to be taken on the floor of the trailing cab of the tram
- Entire Edinburgh Tram Network to be covered within 10% of the journey times that are setout in the Operational Timetable
- Load the tram to AW2 and repeat steps above; and
- Analysis to be performed as follows:
  - Select the greater of the results (AW0 or AW2) for each of the journeys to be used as a benchmark for each individual tram for any particular journey.

The undertaking of the test shall essentially be an operational function led by Infraco but in conjunction with the Operator. Infraco shall manage the preparation for the Tests with technical and maintenance support and monitoring by Infraco (along with representatives from **tie**).

Infraco shall undertake and pass Pre-operations Test before proceeding to the Service Commencement Date.

tie must be given thirty working days advance notice of the Performance Test 1 plan and seven working days written notice of the Test commencement date.

23.15.5 Pass Criteria

The following define the pass criteria for the T3 test.

All test results from previous tram and system and sub-system tests shall be available and signed off as accepted by **tie** including the clearance of all Defect Correction lists unless dispensation has been proposed by Infraco and agreed by tie acting reasonably.

23.15.6 Part 1 and 2 Pass Criteria

Each Pre-operations Test can only be successfully completed:

- As soon as 99% Punctuality Service Element as defined in chapter 2.16 has been achieved in accordance with the Infraco and Tram Maintainer performance regimes.

For the avoidance of doubt any delays caused by road traffic shall not be included in the delay measurement.

23.15.7 Part 3 and 4 Pass Criteria

Part 3 test can be deemed to be passed when none of the 100 journeys have an rms of the combined lateral, longitudinal and vertical accelerations exceeding 30mg.

Part 4 test can be deemed to have been passed when the instrumented tram from the fleet has attained a Ride Index equal to or less than as shown in the tables below in accordance with ISO 2631:

Speed	Wz Vertical	Wz Lateral
40 km/h	2,32	1,58
70 km/h	2,96	2,36

Table 44 - Ride Index in the Drivers Cab

Speed	Wz Vertical	Wz Lateral
40 km/h	2,24	1,64
70 km/h	2,82	2,28

Table 45 - Ride Index in the Passenger Compartment

23.15.8 Consents

This is in addition to passing the above tests.

All consents to achieve full passenger service must have been obtained and evidenced as part of Test T3.

23.15.9 Monitoring and Reporting of Test Performance

The primary data used to evaluate Parts 1 and 2 of this test shall be automatically generated from the Supervisory Control & Communications performance monitoring sub system and validated independently.

During the Pre-operations Test monitoring period Infraco will undertake audits, to the satisfaction of **tie**, of the collection and communication of fault and tram punctuality data against each of the performance indicators.

23.16 Network Performance Test Specification – T4

23.16.1 Overview

This section describes the requirements of Network Performance Test (T4) and the proposals for its execution monitoring and completion. Network Performance Test forms part of the requirements for the final System Acceptance.

The Test shall cover a 28 day consecutive period, which shall be undertaken after the Edinburgh Tram Network has entered Public Service until the Test is satisfactorily passed or, unless otherwise agreed by **tie**.

The Test is the operation of the complete ETN to the Operational Timetable each day for the duration of the test. The timetable used for the test shall be agreed with **tie**.

The undertaking of the test will be an operational function carried out by the Operator. Infraco shall manage the preparation for the Tests with technical and maintenance support and monitoring by Infraco (along with representatives from **tie**).

Infraco shall undertake and pass the Network Performance Test within twelve months after the Service Commencement Date of the whole Edinburgh Tram Network.

tie shall be given thirty working days advance notice of the Network Performance Test plan and seven working days written notice of the Pre-operations Test commencement date.

23.16.2 Pass Criteria

The test will measure the Punctuality Service Element over twenty-eight days.

The test shall be passed once the criteria stated in the Employer's Requirements Operational and Performance Section (Section 2) have been demonstrated to be met.

The Infraco may discount any one day from the calculation but shall not be a day on which a Special Demonstration shall be planned.

For the avoidance of doubt the exclusions in Section 23.13 shall apply.

23.16.3 Special Demonstrations

During the Network Performance Test a number of demonstrations will be performed, these are described in the following two sub-sections.

23.16.4 Substation and UPS Demonstrations

Infraco shall demonstrate that the system can operate with two of the traction supplies from a substation taken out of use, one at a time, for a period of two hours during the peak service. The substations concerned and the times for their disconnection will be selected by **tie**.

The disconnection of the substations and placing them into bypass will be undertaken in accordance with the Operator's normal procedures for such switching.

Operation of the Uninterruptible Power Supplies (UPS) at two tram stops for four hours shall also be demonstrated. During this period the electrical supply to the chosen tram stop UPS's shall be disconnected. The tram stop UPS's concerned and the time for their disconnection shall be chosen by **tie**.

The Infraco shall prepare a plan detailing the programme for the above events and include this in the test arrangements that will be submitted to **tie** in accordance with the review procedure.

23.16.5 Tram Change Over

The Infraco shall demonstrate, during peak hours, a Tram changeover by which a Tram in service shall be substituted with the "hot spare".

tie will give Infraco thirty minutes notice of this test.

23.16.6 Monitoring and Reporting of Test Performance

The Punctuality Service Element shall be obtained. The results for the previous day shall be ratified in accordance with the Performance Regime in Schedule 7 of this Agreement and the Operator Performance Regime under the DPOFA Agreement.

A meeting will take place daily where the performance up to that date is reviewed and any investigations concluded and data accepted. The meeting will be recorded and minutes distributed to each party by the meeting secretary within three working days.

During the Network Performance Test monitoring period **tie** may undertake audits of the collection and communication of fault data against each of the performance indicators.

23.16.7 Network Performance Test Timetable

The Enhanced Timetable delivering the ultimate capacity of the ETN as contracted shall be prepared by the Operator as that which shall be the ultimate timetable to be used in Passenger Service, proposed by the Infraco, and agreed by **tie**.

23.17 Network Reliability Test Specification – T5

23.17.1 Overview

This sub-section describes the requirements of Network Reliability Test and the proposals for execution, monitoring and achievement of System Acceptance.

Network Reliability Test is a set of sub-system reliability tests each measured over a twenty-eight day period. Each specified sub-system has its own specified target detailed within 23.17.2. The tests may start on the same date as T4 (on or after Service Commencement Date) and as each subsystem is individually demonstrated to meet its contractual target that subsystem reliability test is then considered completed. Network Reliability Test is only passed when all the sub-systems meet their targets.

The undertaking of the test will essentially be a maintenance function carried out by the Infraco. However, it requires Infraco management of the preparation for the Tests with technical support and monitoring by Infraco, (along with representatives from **tie** during the Test).

Infraco shall undertake and pass Network Reliability Test within twelve months after the Service Commencement Date of the whole Edinburgh Tram Network to pass Network Reliability Test.

If any part of the works or part of the ETN fails to pass Network Reliability Test then rectification, repair, modification or reinstatement of that part shall be undertaken. The defect correction period on that part of the system or any sub-system which fails the test shall be extended a further twelve months beyond the time of rectification, repair or modification. Infraco will propose and undertake the necessary remedial action and retest to achieve acceptance.

tie must be given 20 working days advance notice of the Network Reliability Test plan and fourteen working days written notice of the test commencement date.

23.17.2 Sub-Systems Subject to Network Reliability Test and Reliability targets

Table 46 - Network Reliability Test

TEST	TARGET VALUE
Tram Reliability	Please refer to Tram Supply Agreement.
Passenger Information Display System	As set out in the Employer's Requirements 99.75% availability over six consecutive Periods.
Passenger Help/Emergency Help Point System	As set out in the Employer's Requirements 99.75% availability over six consecutive Periods.
On Street Track & Formation	Achieves 99.995% availability over six consecutive Periods.
Off Street Track & Formation	Achieves 99.995% availability over six consecutive Periods.
Point Machines	Achieves 99.995% availability over two consecutive Periods.
Traction Switchgear	Achieves 99.99% availability over two consecutive Periods.
OLE Equipment	Achieves 99.999% availability over two consecutive Periods.
Earthing & Bonding	No reported stray current instances, or rail to earth voltages that exceed 60 volts as defined in the EN50122/1, for four consecutive Periods
Operational Radio	Achieves 99.75% availability over two consecutive Periods.
Operational Data Network	Achieves 99.99% availability over two consecutive Periods.
UTC Interface	Achieves 99.75% availability over four consecutive Periods.
Wheel/Rail Interface	No proven instances of Noise and Vibration exceedence have occurred in a six month periods
CCTV System	Achieves 99.9% availability over two consecutive Periods.
Tram Position Detection System	Achieves 99.9% availability over two consecutive Periods.
Traction SCADA System	Achieves 99.75% availability over two consecutive Periods.
Tramstop Lighting	Achieves 98.5% availability over two consecutive Periods.

23.17.3 NOT USED

23.17.4 Assumptions and Exclusions

General Exclusions and Assumptions

Should the Infraco be able to prove to the satisfaction of **tie** that any of the reliability tests would have been exceeded by means of one or more of the following exclusions then, in consultation with **tie**, the test results shall be amended to discount the effects of such proven Network Reliability Test exclusions.

The Network Reliability Test exclusions and Network Reliability Test assumptions set out in this section relate only to the Network Reliability Test and shall not be used or relied upon in any circumstances in any connection with any other test.

When the tests have commenced, neither **tie,** the Operator or Third Parties shall be entitled to interfere, interrupt or influence the tram operation or service or the tests in such a way that it disadvantages Infraco, or has an impact on the testing process, the results, or causes the non acceptance of the tests.

Operator Influences

Defects caused by the Operator's failure to:

Provide properly trained staff as defined in the DPOFA, exercising a reasonable duty of care to good industry practice.

Exclusions

The Infraco must demonstrate by reasoned argument that failures or loss of availability resulting from Operator actions were caused by reasons for which the Infraco was not responsible (eg Operating Manuals and supplier training). The Infraco shall develop and agree audit procedures with **tie** and the Operator in respect of the Network Reliability Test exclusions set out in this paragraph.

However, in no event shall any allowances or relief or Reliability Network Reliability Test exclusion be granted to the Infraco where any delays or failure to pass Network Reliability Test has been caused or contributed to by:

- Any default, breach or omission of the Infraco;
- Infraco defects; and
- Equipment undergoing repair, modification or rectification by the Infraco.

Realistic long term response times to repair defects shall be provided by Infraco during the period of the test.

It is assumed that **tie** shall procure all electrical power and that a supply is available for the tests.

Any failures resulting from inappropriate actions or omissions by the Operator or his contracted staff shall be discounted. as set out in the DPOFA .

For the avoidance of doubt, the impact of third party vandalism shall be excluded.

23.17.5 Monitoring & Reporting of Test Performance

The scoring of faults should be achieved by first reviewing the fault logs and performance reports using them as a filter to establish which faults need to go forward into the review. The review meeting will then be used to discuss and allocate the responsibility of faults under the performance regime.

The review meeting will take place daily where the performance of each system will be reviewed for the previous day. Representatives of Infraco, Tramco, **tie** and the Operator will attend this meeting. Each sub-system will be reviewed and agreement reached on all failures. The meeting will be recorded and the resulting daily report distributed to each party within 3 Business Days.

23.17.6 Audit Procedures

During the Network Reliability Test monitoring period, **tie** may undertake audits of the collection and communication of fault data against each of the sub-system tests and also audit the response times to rectification of notified faults.

23.17.7 Services in Connection with the Operator

The Operator shall be appointed separately by **tie** to provide various services in conjunction with the construction, commissioning and operation of the Edinburgh Tram Network. The Operator's Scope of Supply shall include the following:

Provision of representatives during the Construction, Commissioning and Operation stages to provide the Operator's Services, including liaison with the Infraco.

Observing and reporting on the acceptability of the proposed design and the quality of infrastructure, trams and equipment;

Supporting obtaining the necessary consents for commissioning and Public Operation;

Assisting Infraco in development of a Testing & Commissioning Plan (in conjunction with Infraco)

Appointment and training of staff in support of any commissioning process.

Notwithstanding the Operator's responsibilities described above, the Infraco responsibilities (associated with the interface with the Operator) shall include, but not be limited to, the following:

- providing support to obtain operational approvals and consents in respect of the Edinburgh Tram Network;
- providing technical support on systems integration
- providing technical support on the development of operational plans and management systems; and
- provide technical support with regard to operational interfaces with CEC traffic management systems. This shall include phasing sequence drawings of key junctions
- Preparing and submitting plans for driver training and the training of other operational staff. Undertaking training of the Operator's trainers (8-10 trainers) and control room staff (18-21 staff)
- Prepare and submit plans for maintenance and operations manuals
- Provide support required for System Acceptance, including the development of a Testing and Commissioning Plan;
- Work to mitigate any delays to the system construction and commissioning howsoever caused.

Comm. Model Ref	Infraco	Operator
	The following table represents a guide of the key responsibilities associated with the Infraco and the Operator during the various phases of the Life Cycle Model. Further details are provided within these Employer's Requirements and the DPOFA. The Infraco Contract (refer to the Code of Construction Practice) allows for the potential for Sectional Completion. Accordingly, where Sectional Completion was to apply, then it would follow that the (System Commissioning Model) stages for each Sectional Completion would apply at different times in the programme (e.g. possible to have "Shadow Running" ongoing for Section A, whilst "Commissioning" for Section B on-going). The listed responsibilities would equally apply to each Sectional stage. Items are listed under the most appropriate stage, but this does not exclude the associated activity from being required during other stages	
	GENERAL OBLIGATIONS	
	The general provision of all the technical and management services as defined within these Employer's Requirements. This shall include design, programming, installation, testing, system acceptance, training and maintenance. The Infraco shall be required to work closely with the Operator to successfully deliver the project.	Liaising and working closely (and timely) in partnership with the Infraco to meet the requirements of the Project associated with design, installation, system acceptance, delivery into service and maintenance, taking account of the Infraco's Scope of Supply. The Operator shall also be responsible for Operator Maintenance.

	Management and implementation of a liaison process, with the assistance of the Operator, to ensure that all parties are fully informed and resources arranged adequately.	Provision of staff resources during the Commissioning, Construction and Operation stages to provide the Operator's Services, including liaison with the Infraco. Provide and keep updated the training and recruitment plan describing the roles of each member of the Operations staff with specific instructions for the proper performance of their duties and training requirements.
		Ensuring that all relevant operational and maintenance subcontracts are in place and that appropriate subcontractor staff training programmes are implemented.
	Responsibility for adherence to the programme	Monitoring Progress
	Responsibility for complying with the functional and non-functional requirements as defined within these Employers Requirements.	Observing and commenting on the acceptability of the design and installation.
	Production of risk deliverables and register in accordance with these Employer's Requirements.	Provision of risk advice (from the Operator's viewpoint) to Infraco and commenting / liaising on risk documentation produced by Infraco.
	Under the CDM Regulations, the Infraco shall be responsible as Principal Contractor and shall comply with all associated CDM Responsibilities relating to the design and construction activities until Services Commencement Date (and beyond, where appropriate). Beyond the Services Commencement Date, the Infraco may be required to undertake certain elements of work (including maintenance) which fall within the remit of CDM Regulations. In such a scenario the Infraco would be responsible as Principal Contractor for the duration of such works.	As with any party working on a "CDM site", the Operator shall be responsible for complying with CDM Regulations and the Principal Contractors Safe Systems of working (e.g. permit to work system). Notwithstanding the Infraco's over-arching responsibility as Principal Contractor up to Services Commencement Date, once the network is energised (and trams begin to operate) the Operator shall have a key role in managing the "operational end" of systems (e.g. the Operator would be responsible for developing and managing a permit to isolate systems within the context of the over-arching Infraco's systems).

	There shall be a requirement for the Infraco to comply where appropriate with the Operators Systems and procedures associated with the Operator's responsibility to manage operational safety.	The Operator shall be responsible for Operational Safety. This shall include developing Operational Plans, timetables and Management Systems and Operating Procedures for the Operational Phase. Operational safety responsibilities shall, by definition, occur once any part of the system is energised (anticipated to be between Stages 4 and 5, "Set to Work Tests" and "Commissioning", respectively.
DD	**DETAILED DESIGN STAGE**	
	Completing the full design and meeting all the deliverables as defined within the SDS Providers Agreement with **tie**, which is being novated and which is included in Volume 7 of the Infraco ITN.	Observing and reporting on the acceptability of proposed designs against the Design Manual and the Employers Requirements and the ability of the proposals to meet operational objectives
	Obtaining all approvals and consents in respect of the Edinburgh Tram Network;	Supporting the obtaining of necessary consents for Commissioning and Public Operation (and any consents which are relevant to the Operator).
	Managing and undertaking all interfaces with CEC traffic management systems.	Assisting Infraco with the interfaces with CEC, which are relevant to the Operator.
	Developing and updating a Testing and Commissioning Plan (TCP) for each element of the System including programmes and procedures with controls and acceptance criteria.	Providing input to a Testing and Commissioning Plan (TCP) for each element of the System including programmes and procedures with controls and acceptance criteria.

	Assisting the Operator with the development of a process for the handover for Operational purposes of the infrastructure and equipment from Infraco.	Developing a process for the handover for Operational purposes of the infrastructure and equipment from Infraco.
	Scheduling, and coordinating with the Operator, driver training, and the training of other operational and maintenance staff. The scope of the training shall cover all aspects of maintenance (as defined within these Employer's Requirements) and all operations. The Infraco shall be responsible for developing coordinated Training Plans in accordance with section 40 (Maintenance) of these Employer's Requirements.	Assisting the Infraco in the development of coordinated Training Plans and the specification of training documentation requirements from Infraco and Sub-suppliers.
	Complying with, and undertaking internal audits, associated with the Code of Construction Practice	Reviewing Infraco's compliance with the Code of Construction Practice, associated with any operator related issues.
1	BUILD / MANUFACTURE	
	Managing and implementing the manufacture and assembly of the System in accordance with the general provision of all the technical and management services as defined within these Employer's Requirements	Observing and reporting on the quality and functionality of Infrastructure and Equipment provision / manufacture and its compliance with Specifications where it affects the operational objectives.
	Liaising with the Operator to address any associated issues, and where necessary rectifying any works.	
2	FACTORY ACCEPTANCE TESTS	
	Managing and implementing the Testing process in accordance with the TCP. FAT tests (initial tests and integrated testing) shall be undertaken to verify that the components / system behave as planned in the design, meet the requirements of the design specification and provides correct functionality.	Assisting and providing advice to Infraco to manage the Testing process in accordance with the TCP.
		Observation if necessary and appropriate of any factory acceptance tests on equipment to be provided.

3	INSTALLATION / CONSTRUCTION	
	Managing and implementing the installation and construction at the Site in accordance with the general provision of all the technical and management services as defined within these Employer's Requirements.	Observing and reporting on the quality and functionality of Infrastructure and Equipment provision and installation, and its compliance with Specifications where it affects the operational objectives
	Liaising with the Operator to address any associated issues, and where necessary rectifying any works.	
4	SET TO WORK TESTS	
	Managing and implementing the Testing process in accordance with the TCP. These site tests (System Integration Tests) in accordance with section 6 of Part 1c – Tram Testing and Commissioning of the Employer's Requirements shall be undertaken to demonstrate that the construction / installation has been undertaken satisfactorily and that the systems behave as intended in the design.	Assisting and providing advice to Infraco to manage the Testing process in accordance with the TCP
		In accordance with the TCP; witnessing and reporting on the implementation tests
		Attending Tests
		Managing the Operational Safety of the Testing and Commissioning process in support of Infraco once the system is energised and trams begin to operate. Develop a system of management of safety during testing and commissioning (including the training of staff and contingency provisions)
	Obtaining Consents and Approvals required to allow the system to be energised and trams to operate to the extent not the responsibility of **tie** under Clause 19.	Supporting the obtaining of Consents and Approvals for the system to be energised and trams to operate.
	Reviewing and commenting on the proposed Commissioning Phase Operating Procedures.	Developing Commissioning Phase Operating Procedures.

5	COMMISSIONING	
	Managing and implementing the Testing and Commissioning process in accordance with the TCP. This includes the site commissioning testing as defined within this Section at 23.20.1.	Assisting and providing advice to Infraco to manage the Testing and Commissioning process in accordance with the TCP
		In accordance with the TCP; witnessing and reporting on the implementation tests
		Attending Tests
		Managing the Operational Safety of the Testing and Commissioning process in support of Infraco once the system is energised. Develop a system of management of safety during testing and commissioning (including the training of staff and contingency provisions)
	Providing technical support on the development of operational plans, timetables and management systems and Operating Procedures; and	Developing Operational Plans, timetables and Management Systems and Operating Procedures for Operational Phase
	preparing and submitting plans, manuals & procedures for maintenance and operations in accordance with these Employer's Requirements, in time for System Energisation.	Reviewing and commenting on the acceptability of plans, manuals & procedures for maintenance and operations.
6	TEST RUNNING AND DRIVER FAMILIARISATION	
	Scheduling, and coordinating with the Operator, driver training and the training of other operational staff as part of the Commissioning activities prior to the start of Shadow Running. Implementing training plans including the undertaking of training of the Operator's trainers (8-10 trainers) and control room staff (18-21 staff).	Appointing and training of Operator staff and Operational rules and procedures training for Infraco. The Operator shall be responsible for training the drivers (utilising the training plans / information developed by Infraco and the Operator Trainers, who shall have been assessed as competent by Infraco on the operation of their systems and equipment).
	Demonstrating that the completed Operator training programme has produced a level of adequate	Assisting Infraco to demonstrate that the completed Operator training programme has

	competency to proceed to shadow running.	produced a level of adequate competency to proceed to shadow running.
T1	The implementation of the T1 Post Commissioning Test: follows successful commissioning of the nominated section, test to demonstrate and prove the system is able to perform in a safe manner and delivers the required end to end run times (these may be up to 5% greater than target runtimes).	Assisting and providing advice to Infraco to manage the Testing and Commissioning process in accordance with the TCP
T2	The implementation of the T2 Performance Test: precedes Shadow Running: test to demonstrate and prove the system is able to perform satisfactorily to move into the 3 month Shadow Running Period (The T2 Performance Test is performed over 3 days and 95% of runtimes must be within target runtime; whilst service headways may be increased by up to 50% of those of the operating timetable).	
		In accordance with the TCP; witnessing and reporting on the tests
		Attending Tests
		Managing the Operational Safety of the Testing and Commissioning process. Develop a system of management of safety during testing and commissioning (including the training of staff and contingency provisions)
	Infraco to review to prepare Go Live timetable to be tested during shadow running.	Operator to prepare the Opertional Timetable to be tested during shadow running.
	Obtaining Consents and Approvals required to allow the system to start shadow running to the extent not the responsibility of **tie** under Clause 19.	Supporting the obtaining of Consents and Approvals for the system to commence shadow running.

7	**SHADOW RUNNING**	
	Implementing the Shadow Running Phase to cover the requirements. Please refer to relevant section below.	
T3	Implementing the T3 Pre-Operations Test: precedes Service Commencement, the test is undertaken during the Shadow Running Period, the test is the operation of the initial entry into service timetable and includes infrastructure, trams and operations systems (T3 is over 2 x 5 days and 99% performance must be achieved).	In accordance with the TCP; witnessing and reporting on the tests
		Attending Tests
		Managing the Operational Safety of the Testing and Commissioning process
		Developing a system of management of safety during shadow running and public operation (including the training of staff and contingency provisions)
	Obtaining the necessary Consents and Approvals for Public Operation to the extent not the responsibility of **tie** under Clause 19.	Supporting the obtaining necessary consents for Public Operation
8	**SERVICE COMMENCEMENT DATE**	
	Infraco shall support the preparation for the T4 Network Performance Test with technical and maintenance support and monitoring. (T4 is over a 28 consecutive day period on a rolling basis in passenger service with the ultimate timetable in operation. 1 day in the period may be discounted. The test is to show that reliable operation is achieved.)	The Operator shall manage the preparation for the T4 Network Performance Test with technical and maintenance support and monitoring by the Infraco. The implementation of the T4 Network Performance Test.

	Demonstrations during the Network Performance Test e.g. sub-stations / UPS – demonstration of operation where a sub-station can be taken out of service for 2 hours during peak service.	
	Review, comment and provide support in preparation of the Test and Ultimate Timetables.	Preparation of an agreed Network Performance Test Operational Timetable and Enhanced Timetable as that which shall be the ultimate timetable to be used in Passenger Service.
	Infraco management for the preparation of the T5 Network Reliability Test with technical support and monitoring by Infraco.	The implementation of the T5 Network Reliability Test: the reliability testing of certain sub-systems in Passenger Service (within 12 months of opening).
	In accordance with the TCP; witness and report on the tests	Managing the Operational Safety of the Testing and Commissioning process. Develop a system of management of safety during testing and commissioning (including the training of staff and contingency provisions)

Table 47 - Table showing a guide of the key responsibilities associated with the Infraco and the Operator during the various phases of the Life Cycle Model

23.18 Tram Testing and Commissioning

23.18.1 Document Scope

The scope of this section of the document is to define the Tram Testing & Commissioning requirements that are applicable to all elements of the Edinburgh Tram Network (ETN).

23.18.2 General Requirements

This document defines the process for the testing and commissioning of the ETN that shall be carried out by the Tram Supplier together with the requirements of the Tram Tests that must be carried out to meet the Employer's Requirements and all relevant regulatory bodies as to the quality, performance and compliance of the Trams. It also identifies the tests to be carried out to meet the requirements for System Acceptance testing (involving Trams) of the completed Edinburgh Tram Network.

For certain of the type tests it may be acceptable to reference relevant tests previously undertaken on similar systems. The Tram Supplier will justify to the Tram Inspector all instances where this approach is applicable. This approach will only be possible in areas where there has not been anything other than very minor design changes. Where this approach is proposed, the final test reports and supporting data must be provided to allow the information to be assessed and accepted or rejected. It will be the Tram Supplier's responsibility to obtain any necessary permissions for the use of the test results and data concerned.

23.18.3 Test Plan

The Tram Supplier shall create and adhere to a Test Plan, which will comply with the requirements of EN50215 and encompass a logical build up of testing that leads to acceptance of the vehicles. The Test Plan shall include sufficient testing to demonstrate that all the Employer's Requirements have been met and to ensure that all relevant consents for passenger operation can be achieved from all relevant bodies. It must also be created in such a way as to maximise off-site testing.

The Tram Supplier shall carry out the Tram tests in accordance with this document, the Test Plan and the Tram commissioning and delivery programme. The Tram Supplier shall submit the Test Plan for agreement by the Infraco. Detailed Test Specifications for all tests shall also be submitted for agreement as part of the design scrutiny process and not less than eight weeks prior to the commencement of the tests.

The Test Plan shall be provided in Microsoft Project, together with any commentary, specifications and all results following completion of the Tram tests, in Microsoft Word/Excel format. The relevant supplied drawings shall be provided in electronic format and as hard copy. Test reports for each Tram Test shall be submitted, within two weeks following the completion of the Tram Test.

23.18.4 Tram Test Categories

The Tram Tests shall be divided into five discrete stages:

- Factory Acceptance Tests ("FAT")
- Delivery Acceptance Tests ("DAT")
- Site Commissioning Tests ("SCT")
- System Integration Tests ("SIT")
- System Acceptance Tests ("SAT")

With the exception of the Factory Acceptance Tests, which shall be carried out at the Tram Supplier's Factory, all other tests are to be carried out after the Trams are delivered to the Depot. All the tests are to be carried out by the Tram Supplier, except for the System Integration and System Acceptance Tests, which will be managed by Infraco.

Each category of Tram test can comprise two sub-categories:

- Type tests shall be performed to demonstrate that the vehicle design complies with the relevant section of these Employer's Requirements and all relevant Legislation and regulations;
- Routine tests shall be carried out on each vehicle prior to delivery/handover. The routine tests shall include the agreed measurements and checks to confirm the compliance of each Tram.

The Tram Supplier shall provide all necessary support to the Infraco during the testing and commissioning activities in Edinburgh, from the delivery of the first Tram and until the completion of the System Acceptance Tests. This will include input to the development of the necessary specifications and procedures. The support for the Tram tests to be undertaken in Edinburgh shall include, but be not be limited to, a testing manager and technicians (who will be based in Edinburgh throughout the delivery and testing of the trams), full logistics support for the despatch of urgent and routine spares during the testing process, documentation authors and administrative support for the production and control of test specifications, reports, and supporting documentation.

23.18.5 Test Certificates

Upon the successful completion of each of the Tram tests the Tram Inspector will issue the following test certification:

- Factory Acceptance Type Test Certificate;
- Factory Acceptance Routine Test Certificate;
- Certificate of Tram Delivery; and
- Site Commissioning Type Test Certificate.

Upon successful completion of all the tests for any individual Tram the Tram Inspector will issue the following test certification:

- Certificate of Tram Commissioning.

23.19 Factory Acceptance Tests (FAT)

Factory Acceptance Tests– This group of tests shall be undertaken at the Tram Supplier's Factory and upon successful completion the Tram Supplier will be issued with a Factory Acceptance Type Test Certificate and/or Factory Acceptance Routine Test Certificate by the Tram Inspector. The Factory Acceptance Tests shall be conducted in accordance with the Tram Manufacturing, Delivery Programme and the Test Plan. The FAT will be broken down into Factory Acceptance Type Tests and a series of Factory Acceptance Routine Tests and will comprise both static inspections and dynamic tests. The Factory Acceptance Type Tests shall be undertaken on a single Tram. This shall be the first Tram unless agreed otherwise in writing by the Tram Inspector.

Static inspections and tests shall be conducted at the Tram Supplier's Factory or at the sub-suppliers' premises during normal working hours during which the Tram Inspector will be entitled to inspect, examine and witness testing of all major systems, sections, apparatus, equipment, components, internal seating, fixtures and fittings and devices, including all structural, electrical, hydraulic and other major components and assemblies (except where the items concerned have been previously tested to the Tram Inspector's satisfaction and the appropriate test certificate issued).

Dynamic tests shall be conducted on the test track at the Tram Supplier's Factory or an alternative location subject to the Tram Inspectors agreement.

The Tram Inspector shall be given adequate prior notice of all tests. **tie** may, at its sole discretion, waive its right to attend or witness any test.

Whether or not the Tram Inspector is in attendance the Tram Supplier shall keep, and make available to the Tram Inspector on request, true and accurate records of the tests, the performance of the Tram during such tests, and any faults which developed or became apparent during the course of such tests.

The Tram Inspector may require evidence that the Tram has operated an agreed number of kilometres/hours in order to fulfil the requirements of the Test and Commissioning Plan under the agreed test track conditions without major faults or breakdown and has met the performance standards set out in this section throughout such period before issuing the Factory Acceptance Routine Test Certificate and/or Factory Acceptance Type Test Certificate. The distance travelled during the dynamic test on the test track will be limited and the main objective will be to check functions and performances not endurance, hence the distance travelled will relate to an agreed schedule to prove these functions.

The Factory Acceptance Routine Tests and the Factory Acceptance Type Tests referred to in the following tables shall include such examinations and tests as the Tram Inspector may reasonably require to satisfy himself that the Trams qualify or do not qualify for a Factory Acceptance Routine Test Certificate and/or and a Factory Acceptance Type Test Certificate. This will include but not be limited to; the checking of individual manufacturing and inspection records, module and sub-assembly tests including as-built dimensional checks where appropriate, for major items such as but not limited to bogie frames, wheel sets, traction and brake equipment.

The Tram Supplier shall make available to the Tram Inspector throughout the Factory Acceptance Routine Tests and/or Factory Acceptance Type Tests qualified staff and, where appropriate, its major sub-contractors to conduct, supervise and record the results of all such inspections, tests and examinations as are referred to in this document and to respond to all enquiries about the condition or performance of the Trams or its major sub-systems.

Table 48 - Factory Acceptance Tests: Static Type Tests

TEST	LOCATION	EN 50215 Reference	COMMENTS
Overall dimensional checks	Static test, at the Tram Supplier's Factory	8.1	To include external static envelope, internal dimensions, door widths and openings.
General examination and security check.	Static test, at the Tram Supplier's Factory		To establish accuracy and security of fixing of fixtures and fittings,
Coefficient of flexibility	Static test, at the Tram Supplier's Factory	8.2	Static test with a maximum cant of 100mm simulated. Horizontal and vertical flexibility.
Lifting ability	Static test, at the Tram Supplier's Factory	8.3	Body Lifting and major component removal. Bogie handling.
Tram weight	Static test, at the Tram Supplier's Factory	8.4	Tram and axle weights, including individual wheel and axle loading. Load testing of the complete vehicle and the checking of critical dimensions and clearances under a range of loading conditions. Suspension deflections and door entrance height measurement.
Sealing	Static test, at the Tram Supplier's Factory	8.5	Resistance of body structure to water ingress, humidity and snow.
Electrical insulation	Static test, at the Tram Supplier's Factory	8.6	High voltage insulation tests. Withstand and impedance of all cabling.
Bonding & return circuits	Static test, at the Tram Supplier's Factory	8.7	Continuity and integrity of all safety earth bonds and return current circuits.
Hydraulic system	Static test, at the Tram Supplier's Factory	8.9	Pumps and pipe-work. Pressure tests and leakage.
Braking System	Static test, at the Tram Supplier's Factory	8.10	Friction brake system

TEST	LOCATION	EN 50215 Reference	COMMENTS
Parking brake	Static test, at the Tram Supplier's Factory	8.11	Clamping force measurement
Auxiliary Power Supply	Static test, at the Tram Supplier's Factory	8.12	Power supplies and associated equipment.
Battery charging system	Static test, at the Tram Supplier's Factory	8.13.1	Batteries, battery chargers and associated equipment. Battery capacity for emergency working.
Auxiliary and control system	Static test, at the Tram Supplier's Factory	8.14	Vehicle control and management system. Software validation. Drivers' controls and instruments.
Doors	Static test, at the Tram Supplier's Factory	8.14.3	Passenger Doors, driver's doors. Emergency access and egress. Operation and timing.
Heating, ventilation & air-conditioning	Static test, at the Tram Supplier's Factory	8.14.4	System operation and effectiveness at the ambient conditions of the test location Thermostats, air flows. Hot/cold areas.
Lighting	Static test, at the Tram Supplier's Factory	8.14.5	Interior and exterior lighting.
Monitoring equipment	Static test, at the Tram Supplier's Factory	8.14.7	CCTV System, cameras and displays.
Event recorder	Static test, at the Tram Supplier's Factory	8.14.7	OTMR, (as far as practicable at the test location).
Communications and passenger information systems	Static test, at the Tram Supplier's Factory	8.14.7	Radios, PA, emergency communications (as far as practicable at the test location). Warning tones. Passenger information system. Passenger Emergency Help Points.
Configuration control	Static test, at the Tram Supplier's Factory	8.14.8	Determination of defined software and firmware status for all sub-systems. Modification status for all major and critical components and others as appropriate.

TEST	LOCATION	EN 50215 Reference	COMMENTS
Traction system	Static test, at the Tram Supplier's Factory	8.16	Motors, gearboxes, control equipment, power supplies and current collection.
Tram control system	Static test, at the Tram Supplier's Factory	8.16	Tram central control system and interfaces, fault monitoring and diagnostics.
Operability and maintainability	Static test, at the Tram Supplier's Factory	8.17	Verification of conformity with the proposed and agreed design. Operator and maintainer access to all appropriate areas.
Safety systems	Static test, at the Tram Supplier's Factory	8.19	Brake control systems, emergency brake, passenger emergency. Driver's deadman system, door safety loop. Emergency pushbutton, Track brakes. Horns/warning devices.
Windscreen washers, wipers and demisters	Static test, at the Tram Supplier's Factory	9.18	System operation and effectiveness, demisters.
Pantograph	Static test, at the Tram Supplier's Factory	9.12	Operation. Contact forces.
Sanding system	Static test, at the Tram Supplier's Factory		System operation. Sand delivery rate. Coherence between VTCU output and the correct sanding unit.
Flange lubrication system.	Static test, at the Tram Supplier's Factory	9.11	Set-up of equipment.
Visual examination of all client defined features	Static test, at the Tram Supplier's Factory	HMRI, RVAR	Interior layout, seating, livery and signage.
Emergency coupler	Static test, at the Tram Supplier's Factory		Check of mountings / space envelope. manual operation.

Table 49 - Factory Acceptance Tests: Dynamic Type Tests

TEST	LOCATION	EN50215 Reference	COMMENTS
Traction system performance	Dynamic test, at the Tram Supplier's Factory test track	9.1	Dynamic performance, acceleration and braking rates. Jerk rates. Current collection. Degraded modes. Speed attainment. Power consumption. Wheelslip correction and sanding. Simulated locked axle detection
Braking system	Dynamic test, at the Tram Supplier's Factory test track	9.3	Friction brake system, service and emergency deceleration rates and stopping distances. Dynamic brake operation and blending with friction brake, jerk rates. Wheelslide correction and sanding. Track brake operation.
Thermal capacity	Dynamic test, at the Tram Supplier's Factory test track	9.4	Temperature rise monitoring of traction, braking & auxiliary equipment during repeated duty cycles. Including degraded modes and emergency duty.
Motion resistance	Dynamic test, at the Tram Supplier's Factory test track	9.5	Demonstration/derivation of Tram resistance to motion.
Coupling test	Dynamic test, at the Tram Supplier's Factory test track	9.8	Coupled Tram operation with emergency couplers, as far as practical and subject to availability of two Trams.
Ride quality	Dynamic test, at the Tram Supplier's Factory test track	9.9	Assessment of Tram ride quality, (providing that the test is meaningful at this location).
Flange lubrication system.	Dynamic test, at the Tram Supplier's Factory test track	9.11	System operation.
Pantograph	Dynamic test, at the Tram Supplier's Factory test track	9.12	Operation, Functional check.

TEST	LOCATION	EN50215 Reference	COMMENTS
Electromagnetic compatibility	Dynamic test, at the Tram Supplier's Factory test track	9.14	Electromagnetic radiation and susceptibility of vehicle systems. See also EN 50121, within the constraints of the test track.
Voltage interruption and jump	Dynamic test, at the Tram Supplier's Factory test track	9.15	Reaction of traction/dynamic brake/auxiliary power systems to supply voltage interruptions jumps. Operation over the full-specified voltage range covered by the type test certificate of the traction and auxiliary equipment (as far as practicable at the test location).
Windscreen washers, wipers and demisters	Dynamic test, at the Tram Supplier's Factory test track	9.18	System operation and effectiveness, including demisters.
Tram control system	Dynamic test, at the Tram Supplier's Factory test track	9.19	Interfaces between traction, braking, auxiliary, control and safety systems. Tram management systems, displays and diagnostics.
Monitoring equipment	Dynamic test, at the Tram Supplier's Factory test track	9.19	CCTV System, cameras and displays.
Event recorder	Dynamic test, at the Tram Supplier's Factory test track	9.19	OTMR, (as far as practicable at the test location).
Communications & passenger information systems	Dynamic test, at the Tram Supplier's Factory test track	9.19	Radios, PA, emergency communications. Warning tones. Passenger information system as far as practicable at the test location.
Safety systems	Dynamic test, at the Tram Supplier's Factory test track	8.19	Brake control systems, emergency brake, passenger emergency. Driver's deadman system, door safety loop and speed inhibit. Emergency pushbutton, Track brakes. Horns/warning devices. Speedometer calibration.

TEST	LOCATION	EN50215 Reference	COMMENTS
Operability & maintainability	Dynamic test, at the Tram Supplier's Factory test track	8.17	Demonstration of degraded modes
Parking brake	Dynamic test, at the Tram Supplier's Factory test track	8.11	System operation and pull away test
Noise and vibration	Dynamic test, at the Tram Supplier's Factory test track	9.16	Noise and vibration measurements, as far as practicable at the test location.

Table 50 - Factory Acceptance Tests: Static Routine Tests

TEST	LOCATION	EN 50215 Reference	COMMENTS
Overall dimensional checks	Static test, at the Tram Supplier's Factory	8.1.2	Reduced overall dimension check.
General examination and security check.	Static test, at the Tram Supplier's Factory		To establish accuracy and security of fixing of fixtures and fittings.
Tram weight	Static test, at the Tram Supplier's Factory	8.4.3	Tram, and axle, weights.
Sealing	Static test, at the Tram Supplier's Factory	8.5.2	Resistance of body structure to water ingress
Electrical insulation	Static test, at the Tram Supplier's Factory	8.6	High voltage insulation tests. Withstand and impedance of all cabling.
Bonding and return circuits	Static test, at the Tram Supplier's Factory	8.7	Continuity & integrity of all safety earth bonds and return current circuits.
Hydraulic system	Static test, at the	8.9	Pumps and pipe-work. Pressure tests. Leakage.

TEST	LOCATION	EN 50215 Reference	Comments
Traction system performance	Dynamic test, at the Tram Supplier's Factory test track	9.1.2	Dynamic performance, acceleration and braking rates. Current collection. Speed attainment. Wheelslip correction and sanding.
Braking system	Dynamic test, at the Tram Supplier's Factory test track	9.3.2	Friction brake system, service and emergency deceleration rates and stopping distances. Dynamic brake operation and blending with friction brake, Wheelslide correction and sanding. Track brake operation.
Flange lubrication system.	Dynamic test, at the Tram Supplier's Factory test track	9.11	System operation, as far as practicable.
Tram control system	Dynamic test, at the Tram Supplier's Factory test track	9.19	Interfaces between traction, braking, auxiliary, control and safety systems. Tram management systems, displays and diagnostics.
Monitoring equipment	Dynamic test, at the Tram Supplier's Factory test track	9.19	CCTV System, cameras and displays.
Event recorder	Dynamic test, at the Tram Supplier's Factory test track	9.19	OTMR, (as far as practicable at the test location).
Communications and passenger information systems	Dynamic test, at the Tram Supplier's Factory test track	9.19	PA, emergency communications. Warning tones. Passenger information system (as far as practicable at the test location).
Safety systems	Dynamic test, at the Tram Supplier's Factory test track	8.19	Brake control systems, emergency brake, passenger emergency. Driver's deadman system, door safety loop and speed inhibit. Emergency pushbutton, Track brakes. Horns/warning devices. Speedometer calibration.

23.20 Delivery Acceptance Tests (DAT)

These tests shall be carried out by the Tram Supplier upon the delivery of each Tram. They shall establish that the Tram has not been damaged or affected in any way by the delivery process and that it remains in the condition in which it was inspected prior to despatch from the Tram Supplier's factory. On satisfactory completion of the DAT the Tram Inspector will issue a Certificate of Tram Delivery.

TEST	LOCATION	EN 50215 Reference	Comments
Overall dimensional checks	Static test, at the Depot		Reduced to any parts or components which will been adjusted/removed during the transport.
General examination and security check.	Static test, at the Depot		To establish accuracy and security of fixing of all fixtures and fittings, transit damage. Visual inspection
Hydraulic system	Static test, at the Depot	8.9	Pumps and pipe-work. Visual inspection and checks for leakage.
Tram weight	Static test, at the Depot		Measurement of as-delivered tare weight, plus sand and fluids.

Table 52 – Table showing Delivery Acceptance Tests

23.20.1 Site Commissioning Tests

The Site Commissioning Type Tests shall be undertaken on the Tram(s) as appropriate, when they are delivered to the Depot and following the completion of the DAT. Upon successful completion the Tram Supplier will be issued with a Site Commissioning Type Test Certificate by the Tram Inspector. The tests shall comprises Static and Dynamic tests and will include, but not be limited to, the tests referred to in the tables on the following page.

For the avoidance of doubt the Tram Inspector shall not issue a Type Test Certificate even if by a lack or fault of the system infrastructure a test is failing or cannot be executed.

Table 53 – Site Commissioning Tests: Static Type Tests

TEST	LOCATION	EN 50215 Reference	Comments
Monitoring equipment	Static test, at the Depot	8.14.7	CCTV System, cameras and displays.
Tram location and detection system	Static test, at the Depot	8.14.7	Tram location and detection system.
Event recorder	Static test, at the Depot	8.14.7	OTMR
Communications and passenger information systems	Static test, at the Depot	8.14.7	Radios, PA, emergency communications. Warning tones. Passenger information system.
Noise.	Static test, at the Depot	8.18	Noise (outstanding from factory), internal & external. At same time as dynamic and performed on specified track section.
Safety systems	Static test, at the Depot	8.19	Brake control systems, emergency brake, passenger emergency. Driver's Deadman system, door safety loop. Emergency pushbutton, Track brakes. Horns/warning devices. Speedometer
Pantograph	Static test, at the Depot	9.12	Operation. Contact forces.
Electromagnetic compatibility	Static test, at the Depot	9.14	Electromagnetic radiation and susceptibility of Tram systems. Completion of the Tram FAT type test.

Table 54 – Site Commissioning Tests: Dynamic Type Tests

TEST	LOCATION	EN 50215 Reference	Comments
Traction system performance	Dynamic test, at designated test site	9.1.1	Dynamic performance, acceleration & braking rates. Jerk rates. Acceleration and control on gradients. Roll-back protection. Current collection. Speed attainment. Power consumption. Wheelslip correction and sanding. Emergency duty.
Braking system	Dynamic test, at designated test site	9.3.1	Friction brake system, service and emergency deceleration rates and stopping distances. Dynamic brake operation and blending with friction brake, jerk rates. Wheelslide correction and sanding. Track brake operation.
Thermal capacity	Dynamic test, at designated test site	9.4	Temperature rise monitoring of traction, braking and auxiliary equipment during repeated duty cycles. Including degraded modes and emergency duty.
Tram/track interaction	Dynamic test, at designated test site	9.8	Wheel rail interaction. Load testing of the complete vehicle and the checking of critical dimensions and clearances under a range of loading conditions. Suspension deflections and inter-vehicle clearances. Safety against derailment. Coupled Tram operation
Ride quality	Dynamic test, at designated test site	9.9	Assessment of Tram ride quality.
Kinematic gauging	Dynamic test, at designated test site	9.10	Dynamic performance, kinematics and gauging. Load testing of the complete vehicle and the checking of critical dimensions, swept path and clearances under load conditions. Suspension deflections. Pantograph sway,

TEST	LOCATION	EN 50215 Reference	Comments
Flange lubrication system.	Dynamic test, at designated test site	9.11	System operation.
Pantograph	Dynamic test, at designated test site	9.12	Included in Kinematic gauging
Electromagnetic compatibility	Dynamic test, at designated test site	9.14	Electromagnetic radiation and susceptibility of Tram systems.
Noise and vibration	Dynamic test, at designated test site	9.16	Noise and vibration tests performed on the specified section of track.
Safety Systems	Dynamic test, at designated test site	8.19	Brake control systems, emergency brake, passenger emergency. Driver's deadman system, door safety loop and speed inhibit. Emergency pushbutton, Track brakes. Horns/warning devices. Speedometer. Event Recorder (OTMR).
Tram location and detection system	Dynamic test, at designated test site	8.14.7	Tram location and detection system.
Operability and maintainability	Dynamic test, at designated test site	8.17	Coupling test and recovery.
Parking brake	Dynamic test, at steepest gradient	8.11	System operation, effectiveness on steepest available gradient.

The Site Commissioning Routine Tests shall be performed on each Tram and comprise static and dynamic tests. This shall comprise of a full functional test, both statically and dynamically, of the Tram, including inspection, examination or testing of all major systems, sections, apparatus, equipment, components, internal seating, fixtures and fittings and devices (including testing the same whilst in operation); with the further inclusion of electrical, hydraulic and other major components and assemblies, as far as practical, at the test location.

The Site Commissioning Routine Test will be designed to establish that each individual tram functions in accordance with the design. It is not intended that the routine test should be a full re-working of the either the type test or the factory tests merely confirmation through carefully targeted testing that the build was correct., It will confirm that it is in a suitable condition to operate safely on the system. Upon successful completion of the Routine Tests the Tram Supplier will be issued with a Certificate of Tram Commissioning by the Tram Inspector.

Whether or not the Tram Inspector is in attendance at a Site Commissioning Test, the Tram Supplier shall keep and make available to the Tram Inspector on request true and accurate records of the Site Commissioning Test conducted, the performance of the Tram during such tests and any faults which developed or became apparent during the course of such tests.

23.20.2 Re-Testing

The Tram Supplier shall, if requested by the Tram Inspector, undertake such further examinations and tests as the Tram Inspector may reasonably require to satisfy himself that a Tram and/or the Trams qualify for a Certificate of Tram Commissioning

23.20.3 Testing Support

The Operator shall make the following available where required by the Testing and Commissioning Plan, (and agreed by Infraco):

- Depot and workshop facilities at the Depot;
- Reasonable assistance from its drivers, maintenance and other staff; and
- Track, power supplies and other facilities, as agreed, to meet the needs of the Tram Testing and Commissioning Plan.

All parties involved and their respective representatives and staff shall:

- Observe such reasonable requirements as may be notified in writing by the Operator or to preserve health and safety, protect the Trams against damage and avoid unnecessary disruption to the Operator's operations.

- Use all reasonable endeavours to avoid risks to health and safety, damage to the Trams or unnecessary disruption to the Operator's operations.

- The Tram Supplier shall make available throughout the Tram Commissioning Tests qualified staff from the Tram Supplier's organisation and, where appropriate, its major sub-contractors to:

  - Conduct, supervise and record the results of all such inspections, tests and examinations as are referred to in this document; and

- Respond to all reasonable enquiries about the condition or performance of the Trams or the major systems, sections, apparatus, equipment, components, internal seating, fixtures and fittings and devices, including all structural, electrical, hydraulic and other major components and assemblies and to rectify any failures of the same.

Table 55 – Site Commissioning Tests: Static Routine Tests

TEST	LOCATION	EN 50215 Reference	Comments
Braking system	Static test, at the Depot	8.10.2	Friction brake system, including parking brake
Monitoring equipment	Static test, at the Depot	8.14.7	CCTV System, cameras and displays.
Event recorder	Static test, at the Depot	8.14.7	OTMR,
Tram location and detection system	Static test, at the Depot	8.14.7	Tram Location and Detection equipment.
Communications and passenger information	Static test, at the Depot	8.14.7	Radios, PA, emergency communications. Warning tones. Passenger information system.

TEST	LOCATION	EN 50215 Reference	Comments
systems			
Configuration control	Static test, at the Depot	8.14.8	Verification of defined software and firmware status for all sub-systems. Modification status for all major and critical components and others as appropriate.
Traction system	Static test, at the Depot	8.16	Motors, gearboxes, control equipment, power supplies and current collection.
Safety systems	Static test, at the Depot	8.19	Brake control systems, emergency brake, passenger emergency. Driver's deadman system, door safety loop. Emergency pushbutton, Track brakes. Horns/warning devices. Speedometer.
Windscreen washers, wipers and demisters	Static test, at the Depot	9.18	System function
Pantograph	Static test at the Depot		Contact forces and operation.
Sanding system	Static test, at the Depot		System function.
Doors	Static test at the Depot		Cycle times.
Heating, ventilation and air-conditioning	Static test, at the Depot	8.14.4	Functional check

Table 56 – Site Commissioning Tests: Dynamic Routine Tests

TEST	LOCATION	EN 50215 Reference	Comments
Traction system performance	Dynamic test, at designated test site	9.1.2	Dynamic performance, acceleration & braking rates. Speed attainment. Operation through supply interruptions and at varying line voltages.
Braking system	Dynamic test, at designated test site	9.3.2	Friction brake system, service and emergency deceleration rates and stopping distances. Dynamic brake operation and blending with friction brake, sanding. Track brake operation.
Ride quality	Dynamic test, at designated test site	9.9.2	Subjective ride test to discern any obvious ride irregularity.
Flange lubrication system.	Dynamic test, at designated test site	9.11	System function.
Noise and vibration	Dynamic test, at designated test site	9.16.2	Subjective noise and vibration assessment to discern any obvious irregularity.
Tram control system	Dynamic test, at designated test site	9.19	Interfaces between traction, braking, auxiliary, control and safety systems. Tram management systems, displays and diagnostics.
Monitoring equipment	Dynamic test, at designated test site	9.19	CCTV System, cameras and displays.
Event recorder	Dynamic test, at designated test site	9.19	OTMR
Tram location and	Dynamic	9.19	Tram location equipment

TEST	LOCATION	EN 50215 Reference	Comments
detection system	test, at designated test site		
Communications and passenger information systems	Dynamic test, at designated test site	9.19	Radios, PA, emergency communications. Warning tones. Passenger information system (as appropriate).
Safety systems	Dynamic test, at designated test site	8.19	Brake control systems, emergency brake, passenger emergency. Driver's deadman's system, door safety loop and speed inhibit. Emergency pushbutton, Track brakes. Horns/warning devices. Speedometer calibration.
Parking brake	Dynamic test, at designated test site	8.11	System function Part of braking test

23.21 System Integration Tests (SIT)

The System Integration Tests consist of tests carried out to prove that the ETN as a whole can function as intended. All infrastructure, operation and control systems shall be exercised during these tests. The Tram Supplier will provide reasonable input to the development of the SAT specifications as well as participation in, and support to, the tests whenever reasonable technical support is needed in reference to the Trams.

The System Integration Tests will include, but will not be limited to, the following:

- Comprehensive gauging and dimensional checks under a range of loading conditions;
- Run time tests;
- Interface checks to all items of workshop plant and equipment including the wheel lathe, Tram washing machine, sanding plant, cranes and hoists;
- Access and handling checks for all major items of equipment, sub-assemblies and major capital spares items;
- Validation of the radio communication system; and
- Validation of the tram position detector system.

The System Integration Tests will involve carrying out gauging runs over all parts of the ETN in order to establish that the Trams (when operating individually or in conjunction with other Trams) accord with the Tram Section and the agreed detailed interface arrangements in terms of the alignment geometry, clearances, loads, pantograph dynamics, wheel rail interface, traction power system, communications and route setting equipment, compliance with operational procedures and Tram performance values. In particular it shall be demonstrated that there is sufficient clearance between passing Trams on the Network and between Trams and other Network equipment and installations to ensure that the Trams can be operated safely and without damage to themselves and to the other parts of the System.

There shall be static and dynamic tests to verify that the pantograph conforms to the requirements of the Employer's Requirements.

There shall be a series of tests to demonstrate the ability of one Tram to recover another failed Tram, including on the most severe gradient on the ETN and potentially in a degraded mode.

The testing of the systems, including but not limited to; power supplies, overhead line, Depot equipment, and EMC tests will require the use of a number of Trams running at the same time.

Table 57 – System Integration Tests: Static Type Tests

TEST	LOCATION	EN 50215 Reference	Comments
Lifting ability	Static test, at the Depot	8.3	Body Lifting and major component removal. Bogie handling.
Battery charging system	Static test, at the Depot	8.13	Battery access for maintenance and topping up. Operation and suitability of external battery chargers.
Monitoring equipment	Static test, at the Depot	8.14.7	CCTV System, Interface with the Depot systems.
Event recorder	Static test, at the Depot	8.14.7	OTMR, Interface with the Depot systems.
Tram location and detection system	Static test, at the Depot	8.14.7	Tram location equipment.
Communications and passenger information systems	Static test, at the Depot	8.14.7	Radios, PA, emergency communications. Warning tones. Passenger information system. Interface with the Depot systems.
Traction system	Static test, at the Depot	8.16	Power supply interaction.
Operability and maintainability	Static test, at the Depot	8.17	Review and demonstration of accessibility and removal of components. Fault handling, diagnostics and indications. Safety issues.
Noise and vibration.	Static test, at the Depot	8.18	Noise and vibration levels, internal and external.
Pantograph	Static test, at	9.12	Operation. Contact forces.

TEST	LOCATION	EN 50215 Reference	Comments
	the Depot		
Sanding system	Static test, at the Depot		Refilling system. Verification that the fill level can be observed from inside the tram.
Flange lubrication system.	Static test, at the Depot	9.11	Refilling.
Visual examination of all client defined features	Static test, at the Depot	HMRI, RVAR	Interior layout, seating, livery and signage
Electromagnetic compatibility	Static test, at the Depot	9.14	Electromagnetic radiation and susceptibility of vehicle systems.

Table 58 – System Integration Tests: Dynamic Tests

TEST	LOCATION	EN 50215 Reference	Comments
Tram/track interaction	Dynamic test, at designated test site	9.8	Wheel rail interaction. Load testing of the complete vehicle and the checking of critical dimensions and clearances under a range of loading conditions. Suspension deflections and inter-vehicle clearances.
Kinematic gauging	Dynamic test, at designated test site	9.10	Dynamic performance, kinematics and gauging. Load testing of the complete vehicle and the checking of critical dimensions, swept path and clearances under a range of loading conditions. Suspension deflections. RVAR and HMRI requirements.
Platform gauging	Dynamic test, at designated test site	9.10	Platform stepping distance and heights, tare and loaded conditions. RVAR requirements.
Flange lubrication system.	Dynamic test, at designated test site	9.11	Effectiveness.
Pantograph	Dynamic test, at designated test site	9.12	Operation, contact forces, sway. OLE deflection.
Electromagnetic compatibility	Dynamic test, at designated test site	9.14	Electromagnetic radiation and susceptibility of vehicle systems.
Voltage interruption and jump	Dynamic test, at designated test site	9.15	Reaction of traction/dynamic brake/auxiliary power systems to supply voltage interruptions, jumps and short circuits. Operation over full-specified voltage range.
Noise and vibration.	Dynamic test, at designated test site	9.16	Noise and vibration levels.
Monitoring equipment	Dynamic test, at designated	9.19	CCTV System, cameras and displays.

TEST	LOCATION	EN 50215 Reference	Comments
	test site		
Tram location and detection system	Dynamic test, at designated test site	9.19	Tram location equipment, throughout the available route. Road junction and point motor control.
Communications and passenger information systems	Dynamic test, at designated test site	9.19	Radios, PA, emergency communications. Reception and effective communication with the Depot throughout the available route. Warning tones. Passenger information system
Operability and maintainability	Dynamic test, at designated test site	8.17	Review of all systems as required. Demonstration of degraded modes and recovery practices. Coupling test
Traction supply	Dynamic test, at designated test site		Sub-station load tests, sub-station outages. Regeneration. Overload protection, touch voltage and stray current tests.
Section run times	Dynamic test, throughout the System		Proving of the System infrastructure in stages as it becomes available to operate.

23.21.1 System Acceptance Testing

Tram testing will be undertaken in support of the system acceptance testing set out in these Employer's Requirements.

24 Trams

24.1 Scope

This section defines the requirements for Trams that are applicable to the Edinburgh Tram Network and with which the Infraco must comply.

24.2 General Technical Specification

The Trams shall be of a high quality in design and construction and comply with the following general design criteria:

- High safety standards including, but not limited to:
  - Compliance with Railway Safety Publication 2 - Guidance on Tramways, issued by the Office of the Rail Regulator;
  - Compliance with Rail Vehicle Accessibility Regulations, 1998;
- High reliability, minimum maintenance requirement and ease of repair;
- Proven design and technology;
- Low floor access;
- Easy to clean;
- Modern and attractive appearance;
- Low weight;
- Low environmental impact;
- Meets access requirements for the disabled;
- Minimum use of energy;
- The Trams will be required to have a minimum operating capability of at least 100,000 km per year; and

The Trams shall be designed to have a minimum service life in accordance with Section 6 of these Employer's Requirements.

The Trams shall be articulated in order to negotiate the track alignment. They will be fully bi-directional and capable of being driven from either end and shall have passenger doors on both sides. They will be capable of being operated by one person.

Normal service Trams shall comprise one vehicle, but shall be capable of running coupled together for the purpose of one Tram recovering another failed Tram from any point on the system.

The Tram should be designed and constructed in accordance with a Quality Plan (as prescribed under ISO9001), which should also include a delivery plan and a Test Plan.

A full-scale Tram mock-up shall be provided to demonstrate areas critical to operation and access as part of the formal design process and for use in public consultation. The mock-up shall include the entire cab and a representative portion of one saloon, including a vestibule with at least one operational pair of bi-parting doors and space reserved for wheelchair use. The mock-up shall show the exterior form and livery. The mock-up shall be weatherproof and shall be delivered to a location in Edinburgh designated by **tie.**

24.3 Wheel / Rail Interface

The Trams shall have a wheel profile and suspension characteristic that is compatible with the rail profiles used throughout the System in terms of risk of derailment, noise, wear and vibration. The wheel profile shall allow for flange running at crossings. The Tram will be designed to operate in conjunction with a track gauge of 1,435mm and a flange back-to-back dimension consistent with the rail types to be used on the Edinburgh Tram Network.

24.4 Tramway Path

Trams shall be compatible with the System track alignment and the geometric constraints as outlined in Section 26 of these Employer's Requirements, which gives the alignment criteria and the assumed Tram characteristics. From this the developed kinematic envelope ("DKE") calculations and any other information, to show compatibility with the alignment, shall be provided by the Infraco. The Trams shall negotiate the minimum radius horizontal and vertical curves, and maintain acceptable wheel flange wear.

Minimum clearances to existing structures, Tramstops, overhead line equipment structures and all other road furniture shall be maintained in accordance with the agreed DKE and it shall always be possible for one Tram to pass another, at any point on the system. The Infraco shall ensure that the Tram Supplier shall provide supporting information to enable a reduced DKE to be developed for use in locations where restricted speeds are or may require to be applied.

24.5 Supervisory, Control & Communications Systems

The Trams shall be fitted with equipment to automatically indicate their position to, and communicate with, a central control centre.

Additionally, a bus tracker box will be fitted.

A voice radio system will be permanently available between the driver and the central control centre. This equipment will be supplied by Infraco and will be free-issue to the Tram Supplier, to be installed and tested as part of the Tram manufacturing process.

The supply and integration of the free-issue equipment will be controlled through a system interface register, to be developed from Schedule 22 of the TSA and managed by Infraco.

All on-board systems with real-time clocks shall be updated and synchronised from a common source, throughout the working life of the Tram.

24.6 Depot Facilities

The Trams shall be maintained at the Depot and a system interface register shall be used to ensure that the Trams and the equipment provided for their routine maintenance and operation are compatible.

The Trams shall be compatible with a mechanised sand filling system at the Depot (see Section 29 of these Employer's Requirements), enabling the sand system on the Trams to be replenished within five minutes and by one driver alone. The Infraco shall ensure that the Tram Supplier shall provide a specification for the sand, and contact details for a UK-based commercial supplier of this sand.

The Trams shall have a key suiting system that provides a logical hierarchy of access to cleaners, inspectors, drivers and maintenance staff. It shall not be part of the same suite as detailed in Section 22 of these Employer's Requirements.

The Trams shall be supplied with a nominal 24VDC shore supply, socket compatible with battery charging equipment in the depot.

24.7 Electro-Magnetic Compatibility

The Trams and their sub-systems shall not generate excessive, nor be susceptible to, electro-magnetic interference and shall comply with EN 55013, EN 50121 and EN 50122 as appropriate.the requirements of the specification as detailed in section 16 of these Employer's Requirements.

24.8 Climate and Environment

The Trams shall operate normally in all climatic and environmental conditions found in the Edinburgh area on the proposed route, including operation in a marine environment having a saline atmosphere and being subject to fine wind-blown sand. This shall also include conditions where ice forms on the overhead line and wind speeds of up to 120km/h.

The Trams shall function, without deterioration in performance and for their whole design working life, within the weather conditions anticipated within the Edinburgh area as described elsewhere in Section 3.6.4 of these Employer's Requirements - taking into account the previously quoted wind speed. All equipment housings/enclosures that contain electronic equipment shall be so equipped to avoid the occurrence of condensation. The Trams shall be capable of being started up normally under the range of weather conditions as outlined above after no less than 72 hours of being left in the open in a shutdown condition.

24.9 Interface Management

The Infraco shall procure that the Tram Supplier participates in the interface engineering process. The Tram interfaces are identified in the TSA. The management of the interfaces will be carried out by Infraco using the system interface register.

24.10 Systems Assurance

The Infraco shall ensure that the Tram Supplier shall implement a System Assurance engineering process in accordance with the requirements of the Edinburgh Tram Network. This process shall cover all aspects of design, manufacture, integration, testing and commissioning of the Tram, and all interfaces with the system, to demonstrate compliance with the reliability, availability, maintainability and safety requirements of **tie**.

The Infraco shall ensure that the Tram Supplier shall follow the approach of BS EN 50126:1999 "Railway Applications – The specification and demonstration of RAMS".

The Infraco shall ensure that the Tram Supplier shall implement a reliability, availability and maintainability management process and will detail it in a Reliability, Availability and Maintainability Plan (RAMP).

The Infraco shall ensure that the Tram Supplier shall implement a System Safety Management Plan (SSMP), which shall define the process, activities and requirements for the preparation of a 'Case for Safety' during the design and handover stages of the project. The plan shall also define the system safety management organisation and the strategy to achieve the individual hazard system safety targets.

All foreseeable system safety hazards are to be identified, evaluated and recorded in a Hazard Log that will be managed and maintained throughout the project lifecycle. The Infraco shall ensure that the Tram Supplier shall implement a hazard management process to identify hazards through hazard analysis and the means to mitigate these hazards.

24.11 Noise and Vibration

Trams shall at all times meet the requirements of the **tie** Noise and Vibration Policy (NVP/001/V1.01). Trams shall operate as quietly as is reasonably possible. The proposed design shall incorporate wheel damping, side skirts with sound-deadening linings and resilient mounting of electrical equipment likely to generate noise. The Infraco shall ensure that the Tram Supplier shall provide the anticipated noise levels of the proposed Tram. Noise tests shall be carried out in Edinburgh to determine the frequency peaks generated, in particular by the wheels. The results of these tests shall be used to determine the type and extent of any tuned vibration dampers that should be fitted to the wheels.

24.12 Specific Technical Requirements

The Tram body shall be a nominal width of 2.65m externally. Note that external door sills may be required in order to comply with Rail Vehicle Accessibility Regulations.

The total Tram length shall be a nominal value of up to 44m.

The following loading conditions shall apply in this document:

- AW0 = Tram tare weight (empty car)
- AW1 = AW0 + full load of seated passengers
- AW2 = AW1 + weight of standing passengers at 4 persons/m^2

- AW3 = AW1 + weight of standing passengers at 5 persons/m_2
- AW4 = AW1 + weight of standing passengers at 6 persons/m_2
- AW5 = AW1 + weight of standing passengers at 8 persons/m^2

Where the mean passenger weight is taken to be 70.5kg.

The passenger capacity of the tram shall be at least 230 persons, of which a minimum of 80 shall be seated, on fixed seats. There shall in addition be provision for wheelchairs in accordance with Rail Vehicle Accessibility Regulations. There shall also be provision for luggage racks.

At least 66% of the floor area available for standing must be low-floor, with a height above rail level of between 300mm and 400mm. High floor areas shall be minimised. All doorways shall allow level boarding access at a height between 300-350mm above the top of the rail. The slope of the floor at the entrance shall be in accordance with disabled access regulations. Suitable means of adjustment shall be provided to compensate for wheel wear in order to remain within these limits.

The Tram shall have a maximum operating speed of up to 70km/h. However, a speed of 80km/h must be achievable, though not sustainable for a prolonged period.

The Tram structure will incorporate a strong and stiff underframe capable of supporting a buffing load in compliance with EN 12663 category V without permanent deformation. The structure shall not deform, crack, fracture, corrode or suffer loosening of rivets or bonding during the normal service life of the vehicle. It shall be, and remain, watertight against rain, passing through standing water and passing through the washing plant throughout its working life.

The tram structure shall be designed and tested to accommodate a passenger loading of AW5 as defined earlier in this clause.

All cavities in the floor structure, body sides and ceiling will be well drained and constructed in such a way that water does not collect and corrosion does not occur. Insulation material will fill all void spaces to minimise noise, vibration and heat loss.

The articulated joints will provide a wide gangway and resistance to vehicle climbing in the event of a collision. The articulation will require minimum maintenance and be capable of being dismantled to separate the Tram bodies with a minimum of equipment.

Where different metals are in contact, due regard shall be given to preventing the effects of dissimilar metal corrosion. All metal surfaces shall be treated to resist corrosion. All body panels will be interchangeable between vehicles and all exterior panels will be lined with water resistant, sound absorbing and heat insulating materials to minimise the possibility of resonance.

Easily replaceable energy absorption devices shall be provided at both ends of the Tram such that frontal and rearward collisions, at speeds up to 5 km/hr shall be fully absorbed without causing permanent deformation of the body structure. The front skirts and lower body side panels shall be mechanically fastened so as to allow easy replacement and shall be interchangeable between Trams. Each panel must be able to be replaced by one person in ten minutes.

The Trams shall be designed to be resistant to fire in accordance with the standard BS6853 Category 2, or the equivalent European Standard.

The maximum axle load at AW4 loading, and including all consumables, shall be 11.5 tonnes.

The windscreen shall be compliant to the equivalent International Regulation ECE 43 (Uniform Provisions Concerning the Approval of Safety Glazing and Glazing Materials (Rev1 08.1990). The windscreen and cab side windows shall consist of laminated glass panes made of safety glass. There should be no diffraction effects or colour distortions in the cab windows. Any glass screens dividing the driver's cab from the saloon shall be treated to minimise reflections. All internal glazing shall be made from safety glass.

The side windows (including the door windows) will be made from heat reflecting safety glass. The glazed area shall be maximised within the limits set by structural integrity, solar gain and passenger modesty. Passengers must have a clear view to the exterior whether seated or standing. Tinted windows shall be used to minimise dazzling.

The windows shall allow permeability for radio waves with frequencies for Global System for Mobile telecommunications, and other public-domain transmissions.

All windows, (including the driver's windscreen) shall be easily replaceable using standard methods and tooling available in the Depot. All glass surfaces must be replaceable within two hours and should be secured so as to be watertight and draught-proof. Bonded glass is not preferred, unless it can be demonstrated that the bonded glazed units can be easily interchanged in less than two hours. Bonding to a mechanically-fixed window frame, or securing using a rubber section, is preferred.

If the windows used are bonded, they should have a black, printed ceramic silk screen print to cover the bonding zone and protect the bonding material from ultra violet transmission, on which the ultra violet -Transmission should be less than 0,1% at 400-600 nm.

Opening hopper windows will be fitted throughout the passenger compartment. All interior glass surfaces in the Tram passenger compartments shall be fitted with Ultra Violet light reducing and shatter resisting film on the inside surface, which shall be easily replaceable as a maintenance task when required yet give good visibility when in place. This film shall also provide effective protection against damage to the glass by 'etching'-type graffiti.

24.13 Driver's Cab

The driver's cab shall be arranged so that at least 95% of adult persons can comfortably access the cab desk and all the controls located within the cab, whilst retaining the appropriate field of view out of the cab. The design of the cab shall be undertaken to good human factors practice.

The driver's cabs shall be air-conditioned and the temperature shall be thermostatically controllable by the driver. Air conditioning in both cabs shall be switched on or off from either cab. Temperature selection shall be only available from the cab in use.

An effective windscreen demisting system shall be fitted, suitable for the climatic conditions encountered in Edinburgh. The demisting system shall be able to clear the windows of condensation within ninety seconds of a cab being made operational.

The cab may extend to the full width of the Tram, and be separated from the passenger area by a glazed partition providing good passenger visibility through the cab windscreen. A mirror providing the driver with a view into the saloon (when sat at the controls) shall be provided.

An internal cab to saloon door is required, which must be lockable from the saloon side and cab side but capable of being opened at any time from inside the cab. The door must latch automatically when closed.

An inward opening, hinged and lockable external cab door may be provided. It shall be capable of being locked and unlocked from both inside and outside the cab.

The cab lighting level shall be 250-300 LUX at 1.0m above floor level. The driver shall have the control of switching this lighting on or off.

A generally translucent mesh fabric sunblind shall be provided, with an opaque strip extending 150mm up from the bottom edge. The blind must be able to be deployed by the driver whilst in the driving position. It need only be retractable at stops.

Cab windscreens and cab windows shall maximise the degree of all round vision available to the driver. A clear unobstructed view of the road/track ahead shall be provided with clear and unrestricted sight lines, particularly low down in front of the cab.

The partition between the Cab and Saloon and other glazing surfaces shall minimise the incidence of reflections at all times and in all expected environmental conditions. Blinds or curtains shall be provided to screen the saloon lighting from the cab at night.

The following features that relate to instruction of Tram drivers shall be provided:

- A Tram driver can be under instruction when a Tram is in passenger service, consequently it must be possible for an instructor and a driver to be inside the cab with the cab/saloon door closed, and the instructor must be comfortably and safely located in the cab.
- The instructor must be able to apply the Tram security brakes quickly.
- The instructor must be seated and secure in the cab to the extent that he can apply the brakes even when the Tram is performing unpredictably.
- The instructor's seat may be a portable item,supplied with the Tram.

The driver's seat, unless purpose-designed for a Tram, shall be a seat specifically designed for bus applications rather than for other vehicles such as heavy rail or heavy goods vehicles, as it must be capable of being adjusted frequently without any damage. The seat must be of ergonomic design, easy to clean and easily removable from the cab. The seat cushions shall be easily removable for cleaning.

The driver's seat must be easily adjustable so that 95% of adult persons may be seated comfortably with effective reach to the drivers' controls, and maintain unrestricted lines of sight through the windscreen.

Both cabs on each Tram shall provide stowage for:

- A points handle, typically a steel bar about 1m long (supplied by others). This must be placed so the driver can easily take it with him when leaving the cab, and so it must be stowed and un-

stowed without risk of damage to the cab finishes or equipment. When not in use it must be secured so as to prevent becoming a hazard in the event of an emergency stop or a collision.

- A first-aid box (supplied by others)
- A fire extinguisher to be supplied with the Tram.
- A place to hang a driver's coat, where it will not interrupt the view in any direction.
- A place to hold two A5 ring binders of timetables, information and procedures.
- A place to clip an A5 sheet of paper, which can be conveniently referred to by the driver (whilst at a Tram stop), and which does not obscure any controls or gauges.
- A hand lamp (supplied by others)

Provision shall be made within each cab to allow two operational personnel to separately and securely store personal effects

There shall be provision in each cab for a secure cash box (supplied by others). The dimensions of this are to be provided by **tie**.

There shall be charging points in each cab for a portable radio and a hand-held ticket machine.

The tram shall be fitted with holders in each cab for a destination board, for the purpose of indicating additional destinations of public interest. This board is to be placed in position by the driver so as to be seen from in front of the tram. The dimensions of the board are to be provided by **tie**.

24.14 Tram Controls

The layout of controls, switches and instrumentation shall be agreed with **tie** on the mock-up, by use of design submittals and the use of the mock-up. The desk panels shall be made of material that is wear resistant and free from reflections.

It shall be possible to drive the Tram from each cab. Insertion of the driver's key and the operation of one switch in either cab shall switch on all of the equipment needed to enable the Tram to be driven from that cab. Essential sub-systems shall not be separately switched.

The Tram acceleration and braking shall be controlled from a combined controller handle, incorporating a dead man safety device. This shall normally be locked out of use until released by the driver's key, which shall remain captive in the controller until the controller is placed in the off

position. It shall not be possible to operate the Tram with more than one controller in use at any one time.

The controller shall include a slow speed mode, for driving through the Tram washing plant.

The following controls shall be conveniently placed for the driver's free hand when the Tram is in motion:

First priority

- Audible warnings (bell, horn);
- Track brake (in addition to the emergency brake on the driver's controller);
- Indicators;
- Pantograph emergency drop.

Second priority

- Manual sand (in addition to the automatic sanding system);
- Windscreen washer and wiper controls;
- Headlamp dip/main beam;
- Panic Alarm;
- Tram punctuality display against timetable or headway.

The following controls shall be conveniently placed for use when the Tram is at a Tram stop:

- Door controls;
- Rear-view normal mode push-button;
- Tram Ready To Start (junction calling when at a Tramstop close to the junction);
- Hazard and marker lights;

- Air-conditioning and temperature controls;
- Saloon heating control;
- Fault reset push-button;
- Public Address controls;
- Radio controls;
- Cab light switch;
- Saloon lighting;
- Pantograph control;
- Windscreen demister.

At least one cab shall display an odometer calibrated in km. Both cabs shall display a speedometer calibrated in km/h and mph.

Windscreen wiper control shall be by means of a multi-position switch having intermittent, continuous slow and continuous fast positions. Wipers shall be self-parking to a position close to and parallel with the edge of the windscreen.

There shall also be a separate push button, which operates wipers and windscreen washers for as long as it is held down, and provides one additional sweep of the wipers after it is released.

Each cab shall be equipped with an indicator to inform the driver whether the Tram is running early or late, and by how much.

24.15 Rear View Equipment

Rear-views shall be provided by close circuit television equipment which shall function as follows:

The 'normal' view, displayed whenever the Tram is in motion, shall have two screens in the cab integrated into the desk: one on the left side of the desk and one its right. The images in them shall be the same as would be seen in mirrors.

The 'Tram stop' view shall be displayed in the time between the doors being enabled at a stop and all doors being proved closed. In this view, the monitor on the platform side (the side on which the doors are enabled) shall show the same as in normal view. The other monitor shall display the image from the rear camera on the platform side, to enable the driver to view passengers disembarking and embarking and to ensure that doors are clear before they are closed.

Note that the images of views back from the cab will be laterally inverted and those forward from the rear of the Tram will not.

A separate push button conveniently located on the cab desk shall provide the driver with a changeover facility from 'Tram stop' to 'normal mode' for as long as it is held down, to allow a driver to check that nothing is overtaking the Tram at an on-street stop whilst the doors are closing.

Closed circuit television images must remain clear enough to see a cyclist overtaking the Tram before the Tram sets off from an in-street Tram stop, even whilst it is raining, dark, under street lighting and there are car headlamps shining towards the cameras. The tram supplier will be required to demonstrate that the CCTV coverage allows drivers to effectively see all passengers boarding and alighting, as well as being sufficient for the needs of driving the tram on street.

The images from the cameras shall be displayed in the cab to the driver on colour flat-screens with manually adjustable brightness. Images on these screens shall be viewable by the driver under all ambient lighting and weather conditions and at as wide an angle as possible. Care shall be taken to ensure that 'flaring' of the image from brightly lit, wet, road surfaces is avoided. Special consideration shall be given to the use of this equipment in wet weather and poor lighting conditions, when it may be necessary to remove rain droplets or prevent them from forming on the camera lens.

Rain affects closed circuit television both by creating additional reflections from wet road surfaces and by settling on the camera housings themselves. The system must cope adequately with both.

24.16 Interior

Care and attention shall be given to provide a safe passenger environment. Passenger movement within the Tram shall be made as safe as practicable, and able-bodied passengers shall be able to move along the entire length of the passenger saloon of the Tram.

The free and safe movement and loading of passengers shall be facilitated by the incorporation of handrails, grab-poles and an interior free of tripping hazards and sharp corners throughout the Tram. The gangway width between seats shall be not less than 650mm. Hand-holds will be provided to maximise the use of standing space, particularly in vestibules and articulations.

Steps may be included to permit the movement of passenger's to or from areas where there is a difference in the height of the floor of the Tram. Steps shall not exceed 200mm in height and the quantity should be as few as possible. There shall be a minimum of 16 seats accessible to passengers without using steps.

All seats shall be at least 450mm wide, ergonomically designed, resistant to damage and soiling and have easily replaceable covers. The seats shall as far as possible not be placed on pedestals, i.e. shall not require a step up for passengers when taking a seat. Wherever practicable seats should be cantilevered from the vehicle side so as to leave a clear floor area to facilitate cleaning. Seat rows shall be pitched no closer than 752mm.

The non-slip, easy clean floor covering shall also continue up the vehicle sides and seat pedestals so that there are no corners that can act as dirt traps. The floor covering shall be hardwearing with minimal openings and continuous welded or seamless glued joints. The edges of the floor covering shall be sealed to prevent water penetration to the structure of the Tram.

The floor covering shall be highly resistant to staining from any source.

The actual floor area available for standing passengers shall be clearly identified. From this the total standing capacity shall be calculated, respecting Rail Vehicle Accessibility Regulations and the limitations of standing room in areas such as articulations. Seating shall generally be arranged transversely with minimum longitudinal seating.

The tram shall be fitted with luggage racks, distributed evenly about the vehicle and situated as close as practicable to the vestibules. The luggage racks shall occupy a floor space of up to $10m^2$ and extend the full height of the interior and have two intermediate shelves. At floor level a horizontal bar shall extend across the opening into the saloon to prevent objects rolling out of the luggage space. Luggage shall be effectively prevented from excessive movement out of the racks, either under high rates of braking or lateral acceleration. The luggage racks should be easily replaced by seating (or standing areas if appropriate) should **tie** require to do so.

The tram is to be provided with information screens so as to be visible from within most parts of the saloon. The screen should be able to display video information for events and places of public interest, and should also be able to display selected views from the closed-circuit television system. All passenger areas of Trams shall be provided with windows in all sidewalls to maximise visibility for passengers. This requirement shall also apply to draught screens and separation walls to the driver's cabs.

The Tram shall provide data on the number of passengers boarding and disembarking at each Tramstop. This data shall be easily downloaded each day when the tram returns to the Depot. Software to allow analysis of the data shall be provided.

The passenger counting facility shall be incorporated on 6 of the trams in the fleet only. It shall be possible, with minimum disruption to wiring looms, body panels and major equipment, to retro-fit passenger counting equipment should this be required after the vehicles have been delivered.

Passenger stop request buttons shall be provided in the saloon area in accordance with Rail Vehicle Accessibility Regulations.

Interior saloon lighting shall provide glare free, uniformly distributed illumination in passenger areas, to a level of between 280-350 lux. The lighting diffusers shall be easily cleanable.

Emergency internal lights must function after disconnection from the overhead power supply (at all operating temperatures) in accordance with the battery back-up and load-shedding requirements below. Emergency internal lighting shall provide a minimum illumination of 30 lux at floor level and shall be evenly distributed in each passenger area of the Tram. The operation shall be independent from the overhead line power supply. Uniformity of illumination shall not be less than a factor of 0.4 Headroom throughout the seating areas shall be at least 2.1m to ceiling.

There shall be litter bins provided at each vestibule on both sides of the tram, each being able to be filled with typical soft drink cans. The litter bins shall be easily emptied.

All passenger areas of Trams shall be provided with a heating and ventilation system that maintains a constant acceptable ambient temperature during transit between Tram stops and during boarding and alighting at Tram stops when operating in all prevailing climatic and environmental conditions on the proposed route.

The arrangement of heating devices shall prevent excessive draughts caused by high airflow rates, due to the even warm air distribution inside the Tram. With the appropriate arrangement of the

vents, the air inside the Tram shall be heated and distributed over a large area through natural convection. Pockets of hot and cold air shall be avoided.

The interior of each Tram shall be fitted with reserved spaces for on-board advertising and passenger information notices. These spaces shall allow cardboard panels, 210mm deep, to fit snugly into retaining grooves. A clear smooth surface at least 160mm deep shall be available between the grooves to allow for the fixing of vinyls. There shall be a route map above the inside of every passenger doorway. The Infraco shall ensure that the Tram Supplier shall produce and fix all notices required by law or the Safety Management System, and fix free-issue logos, route maps and other notices, using appropriate materials and attachment methods, against a schedule which shall be agreed by **tie** on the mock-up.

Trams shall be fitted with racks close to the vestibule areas for holding information leaflets and newspapers. The arrangement and design of these racks is to be agreed by **tie** on the mock-up.

Two night partitions shall be provided which are fully retractable and can be securely stowed when not in use. These partitions shall be located adjacent to the articulations on either side of the wheelchair area towards the centre of the tram.

This night partition should be included in the mock-up.

The function of these partitions shall be to enable the rearmost portion of the tram to be securely locked out of use by the on-board inspector in order to enable him to more closely supervise the passengers in the forward portion of the tram whilst retaining the wheelchair facilities, as required by RVAR.

The partitions themselves shall be simple to operate by one person in the range of 5th percentile female to 95th percentile male. It shall be possible to lock the partitions in either the stowed or fully deployed position using a key which is carried by the on-board inspector as part of his normal duties. It shall be possible to deploy and stow the partition within 2 minutes. When deployed or stowed the partition shall be robust enough to withstand a person falling against it without sustaining damage.

A key operated control, located such that it may be conveniently operated by the on-board inspector with the partition deployed, from either side of the partition, shall cause the lights in the rearmost (isolated) portion of the tram to be reduced to emergency lighting levels, and disable the external door pushbuttons in order to prevent passengers accessing this portion of the tram. Under all circumstances the crew entry functionality at the single end doors shall remain operable and it shall be possible to operate the emergency door release throughout the tram. Additionally the Passenger

Emergency Communication Units shall remain active in all parts of the tram. The activation of the key operated control shall be indicated in the active driving cab but shall not cause a fault alarm.

In order to assist with the design the following information gives the anticipated normal method of operation.

At a terminus where the partition is to be put in place:

- The passenger doors will be opened in the normal way to allow passengers to exit and enter the tram (at this point they may board at any point in the tram);
- The driver will close and remove the enable command from all doors before closing down the cab and walk to the other cab;
- The on-board inspector will move any passengers in the area to be closed off to the portion of the tram forward of the partition;
- The inspector will then secure the partition in place and operate the key switch to deactivate the rearmost door controls and dim the lights;
- The driver will activate the forward cab and enable the doors for passenger boarding in the normal manner prior to departing.

Consideration should be given to providing an indication on the side passenger information displays to indicate to intending passengers that boarding is at the forward end of the tram only.

Tram loading will be uneven when the partition is deployed. The implications on load compensation in traction and braking control of the tram shall be considered and should continue to function appropriately when this condition is in force.

Interior ceiling and coving panels should be securely retained, so that they do not fall onto the maintainer when the catch is released. All interior panels should be small enough to be handled and lifted by one person unaided.

The interior livery shall be developed as part of the system identity and branding package and is to incorporate the features set out in the Design Guidelines. Typically this shall include the following factors:

- Paint finishes should use the same colours as for the exterior;
- GRP interior panels / door interiors / lower finisher trim for bonded glazing shall be Blue RAL 5005;
- Roof / coves / sides laminates shall be the same colour as Perstorp PP5650U Cezanne;
- Seats and wheelchair backrests shall be covered in Holdsworth Edinburgh Tartan – W218ET (including priority moquette);
- Driver's seat covering shall be Black hide material;
- Floor colours shall be as per Taraflex Luna NT Lewis (Taraflex Red BEF 53/01) and Taraflex Polaris NT Arran (Taraflex Blue BEF 33/01);
- Floor covering weld cord – Yellow;
- Seat backs shall be in Lothian Blue; and
- Hand rails and stanchions shall be in Red RAL 3020.

Passenger seats shall be of a similar style to the Grammar Pratico 2845 Low backrest, as currently deployed on Lothian Buses.

24.17 Bogies

The vehicle will have a minimum of 66% adhesive weight on motored axles.

The bogies shall be of proven design and have been used successfully in another Tram project.
The bogies will incorporate suspension systems to give a high-quality ride characteristic. The suspension system will be self-adjusting or adjustable for wheel wear so that ride heights can be closely maintained.

The ground clearance (from top of rail) fully laden with worn wheels shall not be less than 50mm to any part of the bogie structure except a track guard.

Each axle on the motor bogies will have a spring-applied friction brake. It shall be possible to release the spring-applied brake manually in the event of failure of the actuation system. Under normal operation the parking brake will release and apply automatically when the driver's controller is activated.

Each bogie shall have two electro-magnetic track-brakes, one suspended over each rail between the wheels.

The wheels shall incorporate resilience and damping in order to minimise noise and vibration. Tuned vibration absorbers will be fitted after carrying out tests to determine their most effective parameters.
Effective under-run protection arrangements shall be provided. The end bogies will carry adjustable track guards on their outer ends, to conform to Railway Safety Publication 2 – Guidance on Tramways, issued by the Office of the Rail Regulator requirements for under-run protection. The motor bogies will be interchangeable with each other.

Removal of components such as brake actuators, suspension units, etc. will be facilitated to allow on-site repair and replacement of major items such as motors or wheels to take place with the minimum of Tram down-time.

The ride comfort levels measured according to the ISO 2631 Standard on a ballasted straight and level track in good condition shall be no worse than:

Speed	Wz vertical	Wz lateral
40 km/h	2,32	1,58
70 km/h	2,96	2,36

Table 59 - Ride Comfort in the Driver's Cab

Speed	Wz vertical	Wz lateral
40 km/h	2,24	1,64
70 km/h	2,82	2,28

Table 60 - Ride Comfort in Passenger Compartment

At least two wheelsets of the Tram shall be equipped with flange lubrication equipment on all wheels. Both sides of the flange shall be lubricated. It shall be capable of being programmed to operate on the basis of either location, or of a time interval, or a combination of these.

24.18 Re-Railing

The Trams shall be capable of being returned to the running track in case of derailment with the minimum amount of equipment and in the shortest possible time. The Infraco ensure that the Tram Supplier shall indicate the best methods for re-railing and the equipment required, for all track forms used on the system.

If the Tram design includes suspended body sections, then articulation locks shall be procured by the Infraco from the Tram Supplier.

24.19 Propulsion Equipment

The Tram shall not export additional risk onto Network Rail infrastructure. In particular, the harmonic generation from the propulsion and control equipment shall not interfere with train-borne or trackside systems or other third party systems and infrastructure.

The traction equipment shall detect and automatically manage wheel slip and wheel slide, so as to maintain performance and stopping distances in all track conditions and without damage to the wheel treads. When slip or slide is detected sand will automatically be applied to the rails in front of the leading axle. Sanding must not take place due to spurious wheelslip/slide detected at flange running crossings, pointwork or sharply curved or transitional track. The traction equipment shall tolerate variations in wheel diameter.

The Trams will have the following performance when motoring, on straight and level track and with a nominal line voltage of 750V dc:

Speed (km/h)	Load	Performance	Notes
0 -> 30	Up to AW4	1.2 m/s^2	Instantaneous
0 -> 70	Up to AW4	0.8 m/s^2	Average

Table 61 - Tram Performance Levels

The effect of variation of the line voltage (within the prescribed system limits) on the Tram performance, shall be provided by the Tram Supplier on behalf of the Infraco. The maximum line current, and the conditions when it shall be demanded by the Tram, shall also be provided by the Tram Supplier on behalf of the Infraco.

The Trams shall provide safe operation on all gradients under degraded performance modes as imposed by the traction equipment. In particular, the Trams shall be able to complete any journey on the System with one complete traction drive unit isolated.

The traction and braking control system shall be optimised to provide smooth and low jerk values in starting from rest, acceleration, braking and stopping, on level track and on all gradients that are encountered, under all loading and environmental conditions, while protecting against unintended downhill movement.

The Tram may be fitted with a short-time rated emergency mode, with a higher tractive effort, to assist in recovering other Trams.

24.20 Braking Equipment

The Tram Braking Equipment shall be designed to comply with BS EN 13452 Part 1 except where stated below.

The service brake application shall be capable of retardation at an acceptable rate (as defined in Tables 3 and 4 of BS EN 13452 Part 1) at all specified laden conditions and the jerk rate shall be limited so as to not cause discomfort to standing passengers. The service brake shall normally consist of a regenerative electro-dynamic brake, (that as far as is practicable shall return the braking energy to the overhead line) and a friction brake. The electro-dynamic brake shall normally take precedence over the friction brake.

The regenerated voltage shall not exceed 900V. Should the overhead line become unreceptive, the braking energy shall be dissipated in naturally cooled resistors. Transition between regenerative and rheostatic modes shall be automatic, instantaneous and free from jerk. Braking distances and deceleration rates shall be unaffected by transitions during braking.

The brake resistors shall be protected from overheating. Malfunction of the dynamic brake system must be detected and recorded by the fault monitoring system.

Electro-dynamic and friction brakes shall be blended. In normal operation the friction brake will take over from the electric brake at a low speed. In addition, sand will be applied automatically during braking when triggered by the wheel slip/slide control system. Should the electro-dynamic brake be unavailable on any particular traction drive then the friction brake will be automatically applied to compensate, without jerk or loss of performance.

For emergency braking applications the jerk rate shall be limited without compromising emergency braking performance. The friction braking system should be capable of repeated full service or emergency brake applications.

The Tram parking brake shall be of sufficient performance for a Tram (whether laden or unladen) to hold without movement and for an indefinite period another unladen Tram without brakes on the steepest gradient on the Edinburgh Tram Network under all adhesion conditions.

The braking function and performance of the Tram shall be in accordance with Tables 3 and 4 of BS EN 13452 Part 1. The definitions of the braking modes given in these tables are as defined at Section 3.2 of the Standard.

When the Emergency brake is applied, the track brakes should be released immediately before the Tram comes to rest in order to minimise jerk to passengers.

All braking and jerk rates shall comply with the requirements defined in Standard EN 13452.

24.21 Run Time

The Trams will be capable of being operated continuously for twenty hours in each day.

A runtime simulation will be carried out by the Infraco to demonstrate the required end-to-end journey times. The Trams shall have sufficient performance and ratings to meet the requirements for these run times and end to end journey times. The inputs to the simulation shall be based on theoretical Tram performance validated by type test measurements with similar Trams in service elsewhere. The infrastructure and operational assumptions for the runtime shall include, but not be limited to:

- Alignment information, including speed restrictions due to geometry and sighting restrictions;
- Location of Tram stops and assumed dwell times;

- Speed restrictions due to the presence of pointwork;
- Service brake rates including agreed allowances for driver variation and technique, and varying adhesion conditions;
- Jerk rate and acceleration compliant with the requirements;
- Assumed delays due to operation in mixed traffic, which may be in the form of assumed speeds or time delays;
- Assumed delays due to the operation of the traffic-signal-controlled junctions, which may be in the form of assumed speeds or time delays;
- Tram loading;
- Wheel wear; and
- Traction system supply voltage.

24.22 High-Voltage Equipment

All Tram-borne high voltage equipment shall be adequately rated for operation at the line voltage. All high voltage equipment other than the pantograph will be securely enclosed in rigid, metal and earthed equipment cases.

The high-voltage sub-systems will be protected by high-speed circuit-breakers or fuses, which shall be enclosed so that their operation does not cause alarm or danger to persons standing near to the Tram. The length of electrically unprotected cabling between the pantograph and the protection devices shall be minimised.

Wherever feasible, there will be duplication of primary assemblies in order to minimise the potential for single-point failures. There will be a minimum of two self-contained traction groups, so that failure of a traction drive on one bogie does not immobilise the Tram.

24.23 Auxiliary Power Supply Systems

The auxiliary supply converter(s) shall start when fed from the overhead line, irrespective of the state of charge of the batteries.

The converter outputs for auxiliary supplies and battery charging derived from the overhead supply shall be isolated from the overhead supply to prevent any possibility of excessive voltages appearing on the low-voltage circuits.

The saloon heating units (if mounted in the saloon area) shall be provided with appropriate protection and insulation for the heating elements and their terminal connections.

The charging system for the batteries will be appropriate to the type and size of battery provided.

A suitable socket for connecting a 24V battery charging supply shall be provided.

The batteries shall be of a low maintenance type suitable for traction applications and enclosed in electrolyte-proof containers to contain environmental pollution in case of damage. There shall be absolutely no possibility of spillage from the batteries entering the passenger saloon or the cab. The battery enclosure shall be vented to prevent the build-up of gases.

In the event of loss of the 750V overhead supply, the batteries will allow all essential systems to operate for a minimum of thirty minutes. Certain critical functions will continue to operate for up to one hour from battery supply:

After ten minutes:

- The saloon lighting system shall revert to emergency lighting only.

For up to thirty minutes, the following systems shall remain in operation:

- Brake system;
- Public Address system ;
- Emergency lighting; and
- Door system.

For up to one hour the following systems shall remain operational:

- Pantograph;
- Minimum exterior lighting; and
- Radio communication system.

24.24 Faults and Diagnostic System

The Trams will have a condition and fault monitoring system integral with the vehicle control system, to give indication to the driver of the status of equipment and to allow control of degraded modes. Failures or events requiring maintenance intervention shall be recorded by an on-board system that shall retain all pertinent details after the Tram has been shut down, for downloading and analysis by maintenance staff. This system will have sufficient capacity to store such information at least for the interval between scheduled maintenance examinations, on a first-in, first-out basis. There shall be a visible indication that at least one day's worth of recording remains available.

The downloading of data shall be accomplished using a commonly available lap-top computer or related portable device. Any software or special equipment or licences required to download or analyse the data from the Trams shall be provided by the Tram Supplier.

The display for the driver shall also provide unambiguous information of the status of the Tram, and the severity of any faults present. In particular, the system shall continuously indicate one of the following fault states according to the condition of the Tram:

- Tram OK;
- Minor fault, report to control and continue;
- Major fault, report to control and continue in degraded mode;
- Major fault, Tram must be immediately taken out of service; and
- Major fault, Tram inoperative.

The Tram shall perform a self-check automatically whenever it is started up from a shut-down condition.

24.25 Sanding System

The Tram shall be equipped with a system, which deposits sand immediately ahead of the driven wheels in the direction of travel to rectify any poor adhesion conditions at the wheel/rail interface. The system shall be activated both automatically whenever wheelslip or wheelslide is detected, and manually when under control of the driver. Sand will also be automatically applied whenever the emergency or security brakes are used.

Sand shall be deposited on at least two locations on each rail per direction of travel. The rate of sand deposition shall be no more than that required to correct the poor adhesion. The automatic sanding system shall be inhibited when the Tram is stationary, unless activated manually. The sanding unit response time shall be effectively instantaneous.

The Tram-mounted sand boxes shall have sufficient capacity for a full day's service under all conditions of weather and loading.

The sand filler covers shall have seals to keep the sand content dry under all weather conditions, and when the vehicle is being washed.

A means of ascertaining the sand level in the sandboxes shall be provided, visible from within the Tram.

The Tram sandboxes shall be filled from outside of the Tram using a sand dispensing plant at the Depot. The sandbox arrangement will be compatible with the sand dispensing plant such that it is possible for the driver of the Tram to completely fill all the sandboxes in five minutes. In the event of failure of the plant, it shall also be possible to fill the sandboxes manually, and if any special equipment is required for this, the Infraco shall ensure that the Tram Supplier shall provide it.

24.26 Passenger Doors

The Tram will be equipped with at least four pairs of bi-parting sliding-plug doors, plus two single doors, on each side of the vehicle for the passenger saloon and one internal cab door per cab with a clear opening of not less than 610mm. The doors shall be equipped so that rainwater does not drip onto passengers when the doors are opened.

The passenger saloon doors shall be fitted on both sides of the vehicle in the low-floor area. The doors will be of the following characteristics:

- The double door clearance width shall not be less than: 1300 mm
- The double door clearance height shall not be less than: 2025 mm
- The closing force shall be: <200N
- The opening force shall be: <250N

The doors will be opened and closed by the driver or simply released by the driver so that the passengers will be able to open the doors themselves using door push buttons. The push buttons will be illuminated when they are activated. The doors shall stay open for a fixed time before closing automatically. A warning tone shall be sounded when the doors are released and a different tone shall sound to give warning of door closure.

Devices will be incorporated into the individual door control mechanisms, or in the leading edge of the door, to detect and protect against door obstruction. Slow or defective door mechanisms will be indicated to the driver by the vehicle fault management system. The driver shall be able to isolate any door by using the driver's key to operate an isolation switch local to each door. Such a door shall be secured from all forms of operation other than emergency release.

It shall be possible to open each door manually in case of emergency (including any door that has been isolated). An internal emergency handle will be provided at each door entrance. Operation of the handle shall cause an immediate application of the emergency brake and unlock the door such that it can then be moved open by hand after the vehicle is stationary. The emergency handle will only be able to be reset using the driver's key.

The door edges shall be fitted with weather-proof seals that are soft enough to allow a person's fingers to be withdrawn after the doors have closed. The seals shall be effective against all likely weather conditions and in the Tram washing plant and shall not offer a hand-hold to allow persons to ride on the outside of the Tram.

The Tram shall accept a door enable command from the driver when the Tram speed is below 10km/h, but the doors shall not become enabled until the Tram is at a standstill. If, having been enabled, the Tram speed then rises above 10km/h, the enable command shall automatically be cancelled.

The time from the Tram coming to rest to doors being fully open in response to a prompt passenger demand, plus the time from the driver pressing the door close button to the Tram moving off, shall be less than 12 seconds. This time shall include all necessary delays for RVAR-required tones. The doors themselves shall move from closed to fully open or vice versa in 3.5 seconds or less.

The door guidance mechanism shall not be a swing plug mechanism nor a folding door.

The following controls shall be fitted in each cab for driver control of the doors:

- Separate door-enable controls for the left and right sides. It must be possible to enable both sides simultaneously. The 'enable' buttons of the Tram should each be located on the appropriate side of the cab desk.

- One door 'open' button, which will open any doors previously enabled, but not opened by passengers, provided the Tram is at a stand still.

- One door 'close' button, which will close all doors that are open. This will be the normal mode of door closing at Tram stops other than termini.

- To prevent the doors being enabled on the wrong side, the door enable shall be interlocked and programmed with the correct side for the platform at each Tram stop along the route. This feature shall be capable of being over-ridden by the driver (for example, if the Tram uses an unusual platform at a terminus), but such over-ride shall require the driver to press at least one additional button, which shall not be located adjacent to the other door controls in the cab. It shall be possible to open all the doors when the Tram is in the Depot.

The door enabled indicator lights at the doors shall illuminate and the door enabled tone start, simultaneously with the door actually becoming available.

A door shall re-close automatically, with warning tone, if no obstacle is detected for twenty seconds (configurable). This will be the normal mode of door closing at termini.

When all doors are closed and traction is available, an audible signal, distinct from all other tones and quieter and less offensive than any alarm tone, shall sound in the cab in use. This is preferred to a lamp or other visual signal as the driver already has to view the platform and check ahead before moving off.

Unless a separate external cab door is provided, the door nearest each cab on each side (four doors in total) of the Tram shall be provided with local internal and external 'door open' and 'door close' switches operated by the driver's key. These shall be spring-loaded centre-off, turned one way to open and the other to close. Any door opened using a local switch shall be capable of being closed either using the appropriate local switch or the 'door close' button in any active cab. The purpose of these switches is to allow local control of the door by a driver who needs to leave and re-enter a passenger-carrying Tram, for example to operate points, at a place which is not a Tramstop. In addition, unless a separate cab door is provided, a separate control shall be provided in the cab to allow the Tram driver to open and close the nearside front passenger door separately from the cab. This is to allow the driver to open and close this door separately at the crew change halt at the Depot. An exterior emergency door release shall be incorporated to comply with the requirments of Railway Safety Publication 2,

The door-enabled tone required by Rail Vehicle Accessibility Regulations 1998 (as amended) shall be audible from both inside the Tram and on the platform. This may require an additional external sounder if, in order to be heard outside, the internal one is uncomfortably loud for passengers on the Tram.

24.27 Communication and Monitoring Systems (CCTV)

Spatial provision shall be made in the most appropriate part of the Tram for the operational radio system, driver control units and tram position and detection system equipment, including the associated cabling, support equipment, microphones, speakers, antennae and power supplies. The cabling shall be installed and tested by the Tram Supplier.

These sub-systems will be supplied by the Infraco as free-issue items to the Tram Supplier, and shall be installed and functionally tested during the Tram manufacturing process. The Infraco and Tram Supplier shall work with the suppliers of these sub-systems to define and agree the interface requirements.

The Tram shall be fitted with cab-to-cab intercom facilities. The intercom facility will also provide communication between all four cabs when two Trams are coupled during the recovery of a defective Tram. This facility shall be fully duplex and hands-free.

The Tram shall be fitted with internal cameras that record digital images covering:

- The whole of the saloon, (including the passenger help points) with sufficient clarity to enable individuals to be identified for evidential purposes; and

- The views ahead/back from the cabs.

The resolution of recorded images and recording speed of images shall be of a quality from which it would be capable of being reliably used as part of an accident investigation, and in respect of the saloon images shall be of a quality to enable a conviction in the event of illegal activity. Appropriate labelling in accordance with regulations governing the use of such equipment shall be put in place.
The cameras shall be of a hemispherical type without any detectable direction of the camera view. Additional information, i.e. time, date, camera number and the Tram number will be added to every image recorded.

The recorded Closed Circuit Television images will be capable of being retained on the Tram for not less than 72 hours at which point the system will restart recording and erase the retained image. Minimum frame rate shall be 16fps, per camera. Consideration should be given to providing a push-button in the cab to enable the driver to add an index-point to the recorded images.

Closed Circuit Television images shall be taken from the Tram for subsequent retention and analysis. This shall be done using a removable data storage medium rather than by data transfer. It shall be readily apparent to the Tram driver and to maintenance staff when the storage medium is not present on the Tram. The data storage medium shall be retained by a secure locking device, that is not released by a Tram system key. All data storage devices shall be interchangeable between trams.

All software required for off-Tram viewing, editing and analysis, shall be procured by the Infraco from the Tram Supplier. This shall include any non-standard supporting hardware and any associated licences.

24.28 Event Recorder

The Tram shall include a data recorder capable of providing time, speed and distance information at 1.0m resolution or better for the last day's operations, and at 10.0m resolution or better for the last seven days' operations. Additionally, the start and end of the following events shall be recorded:

- Horn;
- Bell;
- Traction;
- Brake;
- Hazard brake;
- Safety brake;
- Track brake;
- Driver's Safety Device;
- Door enable left present;
- Door enable right present;
- Manual sand command present;
- Tram Ready to Start;

- Hazard lights;
- Left indicator;
- Right Indicator; and
- Passenger Help Point.

Software enabling event recorder download data to be interrogated and displayed in both graphical and tabular format shall be provided. The software shall also enable all of the data to be exported into Microsoft Excel for further analysis.

The data shall be recorded onto a secure, removable data storage medium. The data recorded shall include the Tram number and date. The data shall be retained and be retrievable at least until 48 hours after the Tram has been shut down. The data storage medium shall be retained by a secure locking device,that is not released by a Tram system key. All data storage devices shall be interchangeable between trams.

The Infraco shall ensure that the Tram Supplier shall indicate how the distance base of the recorder shall be recalibrated in normal usage.

24.29 Public Address System

Automatic, audible announcements for destination and stops shall be made by means of a digital voice announcement system. The Tram Supplier shall supply a copy of any necessary equipment and software needed to upload new and amended announcements or to alter the times and places at which announcements are made. The system should allow for a sound quality of RASTI 0.7, or better.

Additionally, the Tram shall be fitted with both internal and external public address systems, selectable individually by the driver, to allow the driver to make direct announcements.

The following are additional to the requirements of the Rail Vehicle Accessibility Regulations 1998 (as amended):

- Rail Vehicle Accessibility Regulations permit audible announcements between stops to be omitted where the run time between stops is less than two minutes. This option is to be used wherever possible.

- Where stops are omitted the system shall automatically allow for this without intervention of the driver.

- At a stop, in addition to the Rail Vehicle Accessibility Regulations requirement of announcing the next stop and destination, the equipment must also be capable of announcing the current stop. The form of the announcement to be provided initially shall be:

  "This is <name of current stop>. This Tram is for <name of destination>. The next stop is <name of next stop>."

It shall be initiated by the door enable, and there shall be a short delay so that the door-enable tone is finished before the announcement starts.

24.30 Passenger Information System

The Tram shall be fitted with six external destination displays, one at each end above the cab and two on each side, one near each end. The side displays should not be obscured by open doors. These displays shall be capable of displaying as a minimum a service number and the ultimate destination of the Tram. The displays should be legible from an oblique viewing angle.

In addition to the text indicating the destination of a tram on both the side and cab exterior displays an area immediately preceding the text shall be reserved for a single symbol. This symbol shall be displayed in an array of LEDs of the same size and resolution as that of a text character. The symbol shall be in a single colour which is the same as that of the text display. It shall be possible to display a variety of characters including simple geometric shapes and representative symbols (e.g. an aeroplane to indicate AIRPORT as the destination). It shall be possible to select an appropriate symbol during the programming of the system which will then appear on the display when the driver selects his route.

The purpose of this feature is to assist passengers with reading difficulties to ensure that they board a tram on the correct route for their requirements.

Internal saloon displays shall be used to show information concerning the next stop and additionally a "Tram Stopping" sign. They shall also display the local time, and should also be able to display public service information. The number and location of these displays shall be such that the information shall be easily visible to passengers within any part of the Tram.

The internal visual displays shall display, successively:

- Screen 1: Tram to
- Screen 2: <Destination>
- Screen 3: Next Stop
- Screen 4: <Next Stop>

Stepping to the next stop name shall take place on arrival at a stop once the doors are enabled. Where stops are omitted, the displays shall take account of this automatically without the intervention of the driver.

The size of the Passenger Information Display font shall conform to the requirements of the Rail Vehicle Access Regulations 1998 (as amende). The brightness of the displays shall compensate for ambient light quality.

After leaving the stop before a terminus, the external destination indicators shall change to show the destination of the next trip, so that the Tram arrives at the terminus with the correct next destination already displayed.

24.31 Passenger and Inspector Alarm System

Passenger alarm devices shall be located in the saloon area, at every door area and at the disabled passengers area. These devices shall allow communication with the driver and the location of the active device shall be indicated on the driver's display. The communication system shall be fully duplex.

Request 'Stop' buttons shall be provided and shall be compliant with Rail Vehicle Accessibility Regulations 1998 (as amended) and shall:

- Become operable when doors are proved closed at a Tramstop;
- When the first one is pressed, sound a single audible warning in the cab, illuminate a warning light in the cab and illuminate the Tram stopping indicators (required by the Rail Vehicle Accessibility Regulations) 1998 (as amended) in the saloon;
- No further audible warning in the cab from subsequent button pushes; and

- Be positioned such that they can be easily activated by any passenger intending to disembark, but should not be positioned such that they can be inadvertently activated by standing passengers.

Request stop from the wheelchair spaces shall:

- Illuminate a different warning light in the cab.
- Create a door open request for the nearest door, so it opens as soon as enabled.
- Override the automatic close on that door for the next opening.

All request stop indications shall be cancelled by the next door enable command.

Devices shall be provided that enable the on-board inspector, working within the saloon or on an adjacent platform, to alert the tram driver to an incident.

The handheld, pocket sized device to be carried by the on-board inspector shall have 2 modes of operation. Mode 1 will provide an alarm to the driver to indicate that the inspector is experiencing difficulties or feels under threat. Mode 2 will alert the driver to an immediate emergency e.g. the inspector is under physical attack.

When the inspector initiates a Mode 1 alarm the handheld device will operate silently. If a Mode 2 alarm is initiated a loud 'panic alarm' sound will be emitted from the handheld device in order to deter the attacker.

The inspector's device shall be stored in a charger/holder in the Depot Duty Room for Drivers and Inspectors and picked up by the inspector as he begins his duty on the tram. The Inspector's device shall be equipped with a mounting device and sized such that it can be conveniently and comfortably be carried on the ticket issuing machine shoulder strap. Each cab of the tram shall be equipped with a receiver capable of responding to all alarm Modes transmitted within range.
It shall be possible to replace either the handset or the receiver with a spare in the event of failure or loss.

The handheld device and related system shall operate satisfactorily in the electromagnetic environment which will be encountered on the Edinburgh Tram Network.

24.32 Hauling or Propelling a Defective Tram

An emergency coupler will be provided at each end of each Tram. It will be used only for hauling or propelling a defective Tram. The couplers will normally be concealed behind a removable cover. Coupling must be possible at all locations on the Edinburgh Tram Network.

An empty Tram shall be capable of both hauling and propelling (but not both simultaneously) another empty Tram, which is incapable of movement under its own power, between any two points.

As well as mechanical coupling, the following control facilities shall be provided on a coupled pair of Trams:

- Track brake control of both Trams from the cab in use, assuming that each Tram's batteries have sufficient charge;
- Through intercom between all cabs; and
- Through control and power to hazard lights, brake lights and marker lights.
- The intercom, marker lights, brake lights and hazard lights shall be operational on both Trams even if the Tram being assisted has no battery power available.
- The Tram will have a true reverse direction capability from a leading cab, to allow the uncoupling of one Tram from another. This will be enabled with the use of a sealed switch.

24.33 Exterior Details and Livery

The exterior livery shall be as set out in Section 5 of these Employer's Requirements.

The paint shall typically be water based and should allow for the application and removal of advertising vinyl coverings without damage.

The Infraco shall ensure that the repair methods for the Tram shall be defined by the Tram Supplier and shall not import undue risk with regard to the processes and materials used.

The external lighting shall comply with Her Majesty's Railway Inspectorate Railway Safety Publication, Part 2, The Road Vehicles Lighting Regulations, 1989 and the amendment 1994.

The external lighting shall consist of Light Emitting Diode (LED) arrays wherever practicable, and shall be composed of:

Facing forward

- Two white dip-able symmetric headlights;
- Two white front position lights (integrated in the headlight cluster)(side lights);
- One fixed white centre headlight located centrally above the windscreen;
- Two amber direction indicators; and
- Two end outline marker light (white, at high level).

Facing rearward

- Two red rear position lights (tail lights);
- Two red brake lights;
- Two high intensity rear fog lights (red);
- Two amber direction indicators; and
- Two end outline marker lights (red) (at high level).

Side Markers. Four, or more, amber LED combination lights down both sides working as:

- Side marker lights;
- Direction indicators; and
- Side reflectors.

The Tram exterior shall be designed so as to prevent surfing by any individual.

The Tram exterior finish shall allow for easy repair to accidental damage and severe attacks of graffiti. The finish shall allow for the easy application and removal, if required in the future, of special finishes for advertising, such as self-adhesive vinyl.

24.34 Roof-Mounted Equipment

Much of the electrical traction and auxiliary equipment will be housed in equipment cases located on the roof of the Tram. The equipment cases will be robust, weatherproof and suitable for storage and operation in an exposed position. All enclosures will minimise the risk of condensation, and provide adequate and effective ventilation for cooling where required. The normal working of the roof-mounted equipment shall not be adversely affected by dust, wind, rain, snow or ice.

Access to the equipment within the equipment cases will be quick and straight-forward for suitably qualified and trained staff, working from high-level platforms. Standing areas shall have non-slip surfaces. Due regard will be given to the safety requirements considering the location at height and the working voltage. Specific measures will be required to mitigate the risk from charged capacitors and batteries, and equipment likely to be at high temperature. All metal enclosures shall be suitably earthed to the vehicle structure.

All the roof-mounted assemblies shall be easily removable with the minimum amount of disruption to the Tram, to allow repair by replacement. The use of plugs and sockets to allow quick connection and disconnection of assemblies is preferred. Cabling and piping shall be protected from accidental damage.

As far as is practicable, the equipment will be equally divided between the two end sections of the Tram to equalise weight distribution.

The location of the pantograph will be determined by the layout of the Tram and shall be mounted above a bogie and as near to the centre of the Tram as possible.

24.35 Pantograph

Infraco shall ensure that the pantograph for the tram fleet shall be supplied by Tramco.

The governing specifications for the pantograph shall be BS EN 50206-2, BS EN 50119 and Railway Safety Publication 2 - Guidance on Tramways, issued by the Office of the Rail Regulator.

The wire height requirements shall be confirmed, including the operational wire heights within the depot buildings, over-bridges and high load route areas.

A single roof mounted pantograph shall be provided compatible with the Edinburgh Tram Network OLE.

Failure of any porcelain insulators on the lightning protection or other equipment shall not allow flexible cables to fall onto the vehicle roof.

The pantograph mechanism shall raise and lower using an electric drive system. In the event of failure or emergency situation, it shall be possible to lower the pantograph using a hand-crank operated from inside the Tram.

In developing the OLE design, the following pantograph / OLE characteristics have been assumed.

- Maximum wire height 6.8 m
- Minimum wire height 4.3 m
- Profile to be developed
- Overall Collector Head width 1850mm assumed
- Carbon length 1000mm minimum
- Collector Head Depth 250mm
- Along track length to be developed
- Head mass (to be as low as reasonably achievable)
  - (a) Carbon 13.0 kg assumed
  - (b) Metallised Carbon 15.0 kg assumed
- Articulation (frame) dynamic mass 12.0 / 16.0 kg
- Head suspension 12000 N / m
- Frame damping raising 60 / 100 N sec / m
- Frame damping lowering 60 / 100 N sec / m
- Head suspension damping 8 / 12 N sec / m
- Quasi-static contact force 90 N / 180 N
- Friction frame hinge 8 N / 10 N

25 Tramstops

This Section of the Employer's Requirements defines the Tramstop requirements applicable to the Edinburgh Tram Network which the Infraco must comply with.

25.1 General

The Edinburgh Tram Network shall have Tramstops provided at the locations shown in Figure 1 – Edinburgh Tram Phases 1a and 1b Network Diagram of these Employer's Requirements.

All elements of the Edinburgh Tram Network infrastructure shall be designed, manufactured and installed to provide a layout and a suite of furnishings reflecting a fully integrated system and shall be of an economical design and construction that shall reflect economy of use, maintenance, overhaul and renewal.

Provision shall be made, in the form of space, agreed fixing details, local cable routes for data, power and lighting (where appropriate) for a local termination point (Tramstop equipment cabinet), to be provided at all Tramstops.

The Tramstop design aesthetic shall extend to the design of the associated street furniture cabinets, trackside isolator cabinets, point control, point heater cubicles, road junction control cabinets, detector loop cabinets, etc. which shall be visually compatible with the Tramstop furniture. Particular note shall be paid to the requirements laid down in the Tram Design Manual to ensure compliance.

The emphasis on this co-ordination shall ensure an integrated design approach within the urban environment.

25.2 Tramstop Definition

Tramstops shall provide passengers waiting for, entering or leaving the tram system with safe, comfortable, environmentally friendly, informative, high quality access and egress facilities.

Tramstops shall be of the following three types:

- Island platform stops;
- Side platform stops; and
- Combined side and island platform stops.

Platforms shall be long enough to cater for nominal tram vehicles with the extreme distance between the outer edges of the end passenger doors of the vehicle of up to 38.13 m.

Side platform stops shall provide passengers with an effective circulation area and shall be a minimum of 3.0 metres wide. Island platform stops shall be a minimum of 4.0 metres wide unless otherwise agreed with **tie**. A stopping tolerance of plus/minus 2.0m shall be allowed for in the platform length.

All platforms shall contain a minimum clear unobstructed envelope.

The platform height shall match the requirements of the tram to ensure level access in accordance with RVAR (Rail Vehicle Accessibility Regulations).

The layout of architectural elements on the platform shall be arranged to provide the user with ease of access and passage on / off the trams.

Access routes serving the platform shall be appropriate for the level of pedestrian activity and be, where practical, a direct route from key passenger generators.

Key views and vistas of the City of Edinburgh shall not be unnecessarily interrupted.

Platforms shall provide passengers with a clear view of approaching trams.

Tramstops shall maintain consistency of alignment with the track.

A Tramstop shall be defined as:

- That area bounded by the rear of any platform structure and the track crossing points at either end; (or for central stops the external track edge between the track crossing points at either end);
- Including any underground service ductwork and cabinet specifically associated with the stop, outside this zone in the immediate vicinity;
- Including all dedicated access routes to the nearest public road or key passenger generator; and
- Including all structures, systems (including cabinet), finishes etc required to deliver the functionality of the Tramstop.

25.3 Tramstop Requirements

25.3.1 General

Tramstop architecture shall reflect a coordinated design consistent with the overall design aspirations as outlined in the Tram Design Manual and in the CEC Code of Practice for Access and Mobility and shall be subject to the approval of **tie**.

All components used in the construction of the Tramstop shall comply fully with relevant British and European Standards.

Tramstops shall be compliant with amongst others:

- The requirements of the Tram Design Manual;
- Railway Safety Publication 2 – Guidance on Tramways, issued by the Office of the Rail Regulator;
- Disability Discrimination Act requirements;
- The outcome of consultation with the Mobility and Access Committee for Scotland (MACS);
- The Department for Transport Inclusive Mobility Guide to Best Practice on Access on Pedestrian and Transport Infrastructure; and
- The Building Regulations (Part M).

Reference should also be made to:

- Mobility-impaired access and egress to and from each platform, the minimum width of ramps provided on the Edinburgh Tram Network System shall be 2.0m between handrails;
- Ramps, if required, shall have a maximum gradient of 1 in 20;
- No ramp shall be longer than 10m without the incorporation of a landing;
- Landings shall be no shorter than the width of the ramp; and

- Mobility impaired tram access/egress points shall be clearly defined within the platform finish if required by the tram design and consistent with tram stopping tolerances.

Tramstops shall be of a design that ensures the mobility impaired are able to use them and all parts thereof without hindrance or confusion. All walking routes approaching or within the Tramstop area shall be clear of any form of obstruction.

Provision shall be made for those who require to use canes e.g. inclusion of tapping rails. Guardrails shall be provided with handrails.

Where appropriate, Tramstops shall be provided with handrails, balustrades, and general platform furniture, other than seating, of a design that inhibits their use as seating or as a climbing medium.

Tactile surfacing shall be provided as appropriate e.g. at platform edges, stairs or ramps (if applicable), and at dropped kerbs.

25.3.2 Platform Surface

The general platform surface shall be in accordance with the Tram Design Manual and will vary dependant upon location, but in all instances provision shall be made for tactile strips (400mm wide) to assist the visually impaired along the platform edge. The platform edge shall have a suitable 65mm wide delineation of the white or alternative inset line to the leading edge of the line-side coping, or other equivalent visual feature.

Disabled boarding points shall be indicated, if required, by use of tactile material indicating the position of the relevant tram doors.

Platform surfaces shall have a nominal cross fall away from the platform edge of 1:40 to a slot drainage system. Platform drainage will be dependant upon local topographical criteria.

The platform top surfaces shall be slip resistant and durable. Transition zones shall be provided, free of trip hazards, which can be clearly differentiated by those who are visually impaired.

25.3.3 Tramstop Furniture and Equipment

All Tramstop furniture and equipment on the platforms shall be constructed of materials and finishes that are resistant to scratching and ensure the easy removal of graffiti.

Emphasis shall be given to the reduction of 'clutter' and where possible elements shall be combined to provide a dual functionality.

The Tramstop furniture and equipment shall be designed to allow easy replacement of damaged components without affecting equipment, lighting and seating.

Tramstop furniture and equipment shall be designed to support the passenger service without maintenance intervention that results in any form of disruption to the service during service hours.
The equipment provided at each location shall be appropriate to that location to limit any unnecessary clutter at Tramstops.

Tramstop furniture and equipment shall be of a modular design based around simple geometric shapes and of modular construction to enable their rapid replacement.

Components and materials shall be of a quality suitable for use in a densely populated and marine environment.

The design of the Tramstop furniture and equipment shall ensure that minor inspection, repairs and maintenance, including lamp replacement, can be carried out during the operational day with the minimum of disruption to passengers, and without disruption to passenger services.

25.4 Description of Tramstop and Street Furniture

25.4.1 General

Each Tramstop shall include the following components:

- Passenger Shelter / Canopied Waiting Area;
- Passenger Help Point;
- Passenger Emergency Call Point;
- Closed Circuit Television Cameras;
- Real Time Passenger Information Display Bus Tracker Reporting (where identified);
- Braille assistance;

- Public Address;
- Information Panel;
- System Logo and Stop Name;
- A perch rail/seat; and
- Advertising panel (6 sheet) - if permitted by Planning Authority;
- Ticket Vending Machines;
- Lighting;
- Litter bins.

Equipment placed on platforms shall not prohibit passengers from having a clear view of an arriving tram.

25.4.2 Shelters and Canopied Waiting Areas

Each platform shall contain facilities to provide passengers with weather protection (e.g., wind, snow and rain) in the form of a canopy or shelter designed and constructed to provide maximum visual transparency with minimum visual impact, consistent with offering the required protection.

Tramstop shelters shall be of a modular design based around simple geometric shapes, providing the necessary requirements for passenger use and comfort. A clear uninhibited view of arriving trams shall be available to passengers from within the shelter area.

Tramstop shelters shall permit future easy alteration to the capacity in terms of volume of passengers and equipment to meet emerging needs.

Lighting within the shelter shall provide a minimum of 50 Lux evenly distributed (controlled by sensor).

All shelters shall be provided with adequate drainage facilities to ensure all rainwater is carried away into the Tramstop drainage system.

Side infill panels together with back panels shall be of toughened transparent glass to provide a light visual appearance and with the Roof panel of complementary quality to provide passengers with protection from the weather. The design shall be such that it provides a safe environment for passengers in the event that glass panels are missing from the shelter as a result of breakage. The design of the shelter shall also take account of access requirements for maintenance and repair purposes.

Side panels shall provide sufficient depth to give weather protection but not obstruct the safe use of the Passenger Emergency Call and Help Points and shall meet the requirements of the visually impaired.

Shelter roofs shall be profiled to prevent build up of litter / debris on the top surface. The shelter structure, roof and wall panels shall, as far as is possible, be made from proprietary components in order to facilitate ease of replacement and repair.

25.4.3 Tramstop Lighting Columns

Platforms shall be provided with a minimum illumination level of 30 Lux.

Lighting shall be low energy, avoid glare to tram drivers and road users, have good colour rendition and be provided throughout the whole of the area occupied by the Tramstop.

The Tramstop lighting shall differ from the adjacent urban and or city lighting and shall emphasise the presence of the Tramstop to enable passengers to identify the Tramstop from a distance. Consideration should be given to the requirement to make use of local ambient lighting (which may need to be enhanced) to avoid additional clutter at the Tramstop.

Access routes to the stops shall, wherever practical, use existing street lighting as the sole or primary means of illumination. Where this is not possible then lighting of a similar level to the local road lighting shall be provided.

All platform shelter / canopy lighting shall enhance security in the waiting area.

Tramstop lighting shall not conflict with the requirements for Closed Circuit Television coverage and shall permit the attachment of other stop furniture or equipments as required.

Hinged columns, hinging parallel to the track, shall be provided for ease of maintenance.

Tramstop emergency lighting facilities shall be provided in all shelters where the adjacent road lighting would be inadequate in the event of a Tramstop power supply failure.

25.4.4 Tramstop Name Signs

Each Tramstop shall include an illuminated pole mounted Logo, or more than one if there are more than one access points from a public road, or a sign incorporating the Edinburgh Tram Network corporate identity visible from a distance of 50m.

Each Tramstop shall be provided with Tramstop name signage as part of the general furniture arrangement on each platform.

Tramstop name signs shall be legible to tram-borne passengers as early as possible on their approach to the platform.

An appropriate number of stand-alone Tramstop name signs shall be provided along the length of each platform. The construction and materials shall form part of the "family" of components forming the Tramstop furniture.

The Tramstop name sign support structures shall be incorporated within the line of any guardrails, should these be provided, and into the advertising / information display.

The Tramstop name signs and Logo shall be illuminated and shall be displayed on the tram arrival side of the shelter as well as along the platform.

25.4.5 Advertising / Information Signs and Displays

A Real Time Passenger Information Display (double sided) shall be provided at each platform.

This shall take the form of a dynamic multi line visual display which is legible in all weather conditions to passengers having normal vision and standing at a distance of 10.0m away.

The Real Time Passenger Information Display shall comply with the requirements described in the Employer's Requirements.

Passenger information regarding the tram service and safety notices shall be provided at all Tramstops in both writing and Braille.

All passenger-operated equipment shall be provided with clear unambiguous operating instructions in both writing and Braille.

A suitably enclosed weatherproof map (part of the Tramstop furniture) of the local area, bearing the words 'You are Here', shall be located in each platform shelter.

A suitably enclosed weatherproof information display or displays (indicating the locations of adjacent bus stops and bus related information, hospitals, local amenities and places of interest) shall also be located at each platform access/egress position.

At appropriate key interchange locations (refer to 35.4.1 - Overview to the Passenger Information Display System), provision shall be made within the Tramstop layout to provide a bus tracker information panel, which shall be provided and installed by others.

25.4.6 Litter Bins

Litter bins, where provided, shall be stainless steel (Minimum Grade 304 to BS 5135) to facilitate easy cleaning and shall have a lockable removable bin liner.

The location of bins shall not obstruct the main passenger circulation routes and shall ensure convenience of use.

A minimum of two litter bins per platform shall be provided each positioned mid-point between the shelter and the end of the platforms.

Lockable access covers shall be provided and the bins shall be designed to limit entry and retention of liquids.

The bin size shall be determined on the basis of a single collection per day.

25.4.7 Public Address

Speakers shall be provided at each lighting pole location and within the shelter to enable passengers to receive messages without volume settings being high and causing nuisance outside the area of the platform.

Induction loops shall be provided within the central area around the shelter position.

Further details of the public address system are contained in Section 35.13.2 – Workstation Capabilities.

25.4.8 Tramstop CCTV

Closed Circuit Television (pan, tilt and zoom) digital colour cameras shall be provided on each platform to enable colour pictures to be displayed at the Control Centre and other Closed Circuit Television monitoring authorities.

The canopies / shelters, stop lighting and publicity / information displays shall not inhibit the Closed Circuit Television coverage of the Tramstop or platform.

The total number of cameras on each Tramstop shall be dictated by the physical restraints associated with each individual Tramstop, however, a minimum of one per platform shall be provided.

25.4.9 Passenger Help Points and Passenger Emergency Help Points

Tramstops will be provided with one combined Passenger Help Point and one Passenger Emergency Help Point on each platform, providing two-way (duplex) audio communication between a person located on the platform and the operator located at the Control Centre.

The Passenger Help Points / Passenger Emergency Help Points detailed arrangements shall be in accordance with Section 35.13.2 – Workstation Capabilities.

25.4.10 Guardrails, Handrails and Cycle Racks

Platform guardrails shall be provided to the rear of any platform where there is a potentially dangerous interface with passing road vehicles, Network Rail or a significant change in level.

Splashguards shall be provided in vulnerable locations.

Where provided, guardrails shall be set at 1150mm above platform level and comply with the requirements for the mobility impaired.

Cycle parking frames will be provided at each Tramstop, where this is appropriate. These will be positioned within view of the Closed Circuit Television surveillance system.

25.4.11 Seating

Bench seats (with integral arm rests and perforated seating structure) shall be positioned on each platform and within each shelter a perch rail / seat shall be provided, designed to prevent the retention of liquids. In all instances the under seat space shall be open to meet security requirements.

25.4.12 Ticket Vending Machines (TVMs)

Ticket vending machines shall be located within or adjacent to the shelters. The TVMs shall be positioned in an appropriately shaded location to assist users in reading the machine's visual display. Ticket vending machines will be supplied to the Infraco, as free issue, by TEL.

Infraco shall make provision for the power and communication cable routes, cables and draw wires from the Tramstop equipment cabinet to the proposed ticket vending machine locations.

Sufficient spare ways within the power and equipment cabinet to accommodate ticket vending machines and a local ticket vending machine network connection will be provided. Further details regarding ticket vending machines can be obtained in 36.5 of these Employer's Requirements.

25.5 Electrical (LV) and Communication Facilities

All Tramstop electrical (LV) and communication equipment shall be accommodated within a Tramstop equipment cabinet. LV supplies shall be provided to the equipment cabinet from which local electrical supplies to Tramstop equipment will be fed.

A 230V, 13A or equivalent socket shall be provided within the Tramstop equipment cabinet.

A 110V supply shall be provided at a suitable location on each platform for cleaning purposes.

All power requirements for the Tramstop infrastructure and adjacent infrastructure equipment will be sourced from the local Distribution Network Organisation supply. All power supplies shall be adequately rated to support the requirements of the Tramstop equipment.

25.6 Layover Facilities

Layover facilities shall be provided in accordance with Section 2.15.

26 Track

This Section of the Employer's Requirements defines the Track requirements applicable to the Edinburgh Tram Network which the Infraco must comply with.

26.1 Track Layout

The Infraco shall ensure that the track layout shall be in accordance with ETN Diagram at Figures 2 & 3 – Edinburgh Tram Phases 1a and 1b Network Diagram

26.2 Components

Trackwork components to be provided shall include, but are not limited to, the following:

- Rails (relate to Wheel / Rail interface: N.B. inc. hardness related to welding repair);
- Sleepers and points and crossing bearers;
- Turnouts;
- Points and points motors;
- Points baseplates and slippers;
- Points rollers;
- Crossings;
- Check rails and check rail fastening systems;
- Guard rails and guard rail fastening systems;
- Transition rails;
- Rail joints (fishplated and welded);
- Insulated rail joints;
- Isolatable rail joints and provisions for access to associated rail/cable connections;

- Rail movement joints;
- Rail fastening systems;
- Rail pads;
- Baseplates;
- Resilient baseplate systems;
- Rail embedment for street running track;
- Paved trackbed and concrete trackbed systems;
- Grooved rail drainage systems (including boxes);
- Buffer stops and vehicle arrestor systems;
- Ballast;
- Granular filtering;
- Granular blanketing;
- Geotextile membranes;
- Plastics membranes;
- Geosynthetic reinforcement;
- Provision and installation of signs and markers; and
- Grasstrack.

26.3 General Requirements

Tracks shall be designed and constructed for left-hand running under line of sight operation.

The maximum design speed shall be 80 km/h.

Where the Edinburgh Tram Network runs within an urban environment on non-segregated sections of tramway, the speed limit shall be the same as that for motor vehicle traffic.

The trackforms shall be applied as indicated at the documents System wide trackform Surface Finishes Version 3 ULE90130-SW-DRG-00069.PDF, ULE90130-SW-DRG-00070.PDF and ULE90130-SW-DRG-00071.PDF

The track shall facilitate ease of construction and minimise disruption to other road users and the public during the construction phase on all roads and across all junctions between Haymarket and Ocean Terminal via Princes Street.

The track shall minimise the potential for stray current and be in accordance with the requirements and codes of practice for stray current and the **tie** Earthing and Bonding Policy document. As the valid standard the EN 50122 shall be in force.

Ensure simplicity of overall maintenance and ease of rail replacement and relaying, minimising the disruption to other road users.

The track shall comply with the operational noise and vibration requirements as stated in the **tie** Noise and Vibration Policy. Detailed technical solutions will be determined during the Detailed Design Phase for areas identified as sensitive to Noise and Vibration. The assessment of these solutions shall be in line with the characteristics of the vehicles, the existing sub-structure and the structures adjacent to the track-bed.

The track shall integrate fully with roads, such that differences in roads surfaces, specifically finished levels and skid resistance, are minimised as far as is reasonably practicable.

The track shall integrate fully with surrounding area functionality and appearance, to ensure that hazards to pedestrians, the mobility impaired and cycle users are minimised as far as is reasonably practicable, and such that track surface finishes are in accordance with all design requirements, guidance and aspirations.

Adequate track formation shall be provided to facilitate the secure foundation for track installation.

The in-street track formation shall be of shallow design such that it permits minimum amount of public utility diversions and aids the high speed construction of the tramway.

The surface at pedestrian crossing points shall be level with the top of the running rails and surfaced in non-slip materials. These materials shall be chosen to be reasonably consistent with the character of the locality whilst providing clear indication to all users (including the visually impaired) of the correct point to cross the track and the extent of the Edinburgh Tram Network environment.

Track shall be a standard tramway track with steel rails set to Standard Gauge (1.435m) and shall be compatible with the Edinburgh Tram Network trams.

On ballasted sections of the route, road/rail equipment will be used for maintenance tasks such as tamping. These machines shall be equipped with suitably profiled wheels.

26.4 DKE, Structure Gauge and Clearances

The DKE adopted shall be the "Assumed Tram for Design", as presently defined in the SDS design documents.

Structure gauge and clearance drawings shall include the standards for staff maintenance walkways and tram evacuation walkways.

Adequate walkways are required throughout the route off-street. Appropriate signing shall be included to indicate the walkway.

26.5 Trackforms

Various trackforms, as presently shown in the SDS design documents, are required to suit the different domains in which the track lies along the route and in the Depot and sidings. The different trackforms provided shall comprise, but not necessarily be limited to:

- Flush-finished track in road areas and at Tramstops, including mixed operation with traffic of various kinds, or not; and with a variety of surface finishes;
- Track with grass flush finish;
- Track with plain concrete flush finish (e.g. in the depot and for certain structures, e.g. the A8 Underpass);
- Direct fixation track on structures;
- Ballasted track; and

- Special trackforms in the depot or at Tramstops.

The trackforms shall be designed and installed to take full account of the requirements for future maintenance of components, e.g. life-extension of rails by welding in situ, and the adjustment of the levels of rails and the adjacent surfaces, and of sectional renewal.

26.6 Specific Technical Requirements

Retention of alignment on small radius curves in the case of ballasted track where rails are continuously welded shall be considered. A minimum radius shall be established for the application of ballasted track, with an appropriate alternative trackform applied elsewhere.

For in-street track construction, and in the absence of sleepers or similar, a means of retaining the lateral and rotational position, such as tie-bars of the rail together with the track gauge shall be provided.

A standard trackform shall be provided which shall comprise a slab that shall be suitable for any of the road, pavior / block / sett and grass surface finishes. In effect the surface finishes shall be interchangeable without having necessarily to redesign or reconstruct the whole slab.

A special track form shall be used at sensitive locations to mitigate against ground borne noise and vibration. These locations will be identified by the Infraco in agreement with **tie**.

At the end of all terminating tracks, provision shall be made for a device for arresting Trams. These devices may include sliding friction or fixed type buffer stops, sand drags, architectural features such as planters, wheels stops or other means. The choice of such device(s) shall be made through risk analysis of the location, taking into account the risk to passengers, pedestrians and staff and to the vehicles and surrounding environment.

Rail shall be continuously welded wherever possible. The use of fish-plated joints shall be avoided although fishplated track may be proposed in the Depot to avoid the requirement for rail movement joints at turnouts.

26.7 The Wheel / Rail Interface

A report has been produced by SDS (ref: ULE 90130-SW-REP-00130 v3) which shall form the basis of development of this critical interface. The key factors will be recorded here.

26.8 Drainage

Drainage from trackwork shall be interfaced with the road and civils drainage systems. Adequate drainage within the trackwork system shall be provided such that the integrity of the installations is secure.

The Edinburgh Tram Network shall have a drainage system that, as a minimum, achieves accepted EU or BS standards and Good Industry Practice.

The drainage of all new bridge structures shall be positive and, unless otherwise required by the relevant local authority, all surface water shall be piped to the local storm water sewer systems by a defined drainage path.

Particular attention shall be paid to ensure that surface water drainage systems in the vicinity of traction substations and cable ducts are routed to avoid any risk of flooding of electrical equipment areas, point machine chambers, and the ducts themselves.

For on-street track, the track drainage system shall incorporate an insulated break from the storm water system.

Drainage proposals including any new flows into existing drains and the method of connection shall be approved by Scottish Water, SEPA and the City of Edinburgh Council Roads Department as appropriate.

26.9 Technical Requirements for Points and Crossings

All turnouts, crossings and interruptions to the continuity of the rail head shall be equipped with flange running sections or other design which minimises joint noise.

The design shall minimise flange squeal through tight radii and through junctions.

Points shall be provided with two movable blades so mounted to allow the use of magnetic track brakes and their safe passage through the point and crossing.

All points shall be freely trailable without damage to the blades or mechanism.

Points and crossings shall be designed so that they are capable of through stressing as required.

All points on the main line, likely at some time or another to be taken in the facing direction (including trailing, emergency crossovers), shall be equipped with detection and indication. Indication of trailing points likely to be taken at high speed shall be considered.

All points, when operated by hand lever, shall be capable of being thrown fully, by one throw of the lever, by a male or female person of slight build, without undue effort or strain. To this end, the maximum required effort to change the points shall not normally exceed 230Nm.

Some form of indication shall be incorporated into the mechanism to indicate that the point has thrown fully. Lever mechanisms requiring repeated operation to throw the points are not acceptable.

Efforts should be made to reduce friction and the effort to throw the points. Flange relief of the point tongues is one such feature.

Point tongue profiles and movement on all points shall conform to the same dimensions and tolerances.

Design tolerances shall be maintained in service with a relatively low level of attention.

Designs with potential for high wear rates or other high maintenance features are not acceptable.

Designs with the potential for lengthy infrastructure replacement periods are not acceptable, particularly in on-street areas.

Adequate, functional drainage must be provided to ensure that rail grooves and point machine pits are kept clear of rainwater, sand and rubbish from the street etc.

Pointwork in the depot site area shall be installed in a flush-finished trackform for 9 turnouts and 1 crossing at the beginning of the depot area. This flush-finished trackform will be designed for re-railing purposes only.

26.10 Technical Requirements for Point Operation

26.10.1 Point Machines and Mechanisms in General

All point machines, whether powered or not, shall be from the same family of machines and provided by the same supplier.

Point machines shall allow the points to be 'freely' trailable without damage to the blades or mechanism.

In street running track, point machines shall be installed between the rails of the track.

On ballasted track, in order to facilitate maintenance, they shall be installed to the side of the track, on the outside of a typical two track layout.

Point machines shall be capable of manual operation in a single throw by tram drivers using a removable point bar to be carried in the Tram drivers cab. Only one form of point bar shall be utilised on the system.

It shall be possible for the points to be changed by a male or female person of slight build, without undue effort or strain when the points are not affected by snow or ice. To this end, the maximum required effort to change the points shall not normally exceed 230Nm.

When operated by hand using the standard points operating bar, it shall not be possible to inadvertently partially throw the points, which shall always throw sufficiently to make the respective detection circuits at each lie of the points with a single movement of the lever.

A total number of 70 point operating bars shall be supplied.

All combinations of points and point machines shall be validated to demonstrate that:

- The machines shall exert sufficient force under all foreseeable circumstances to move the points blade into the required position;
- The points shall close and lock reliably under all foreseeable operating conditions;
- Detection settings shall have adequate maintenance tolerances to ensure that points detection setting testing shall be required no more than monthly on all points;
- The wheel/rail interface at the toes of the points shall be such that there is no derailment risk under all combinations of wheel wear, rail wear, and detection settings;
- Any tram driver shall be able to operate all points safely and without risk of injury; and

The enclosing case of the Point Machine shall be to Class IP 67 and be drained.

Point Machines shall not be overstressed in performing its duty. Efforts should be made to minimise friction and the effort to throw the points. Flange relief of the point tongues is one such feature and there are others such as PTFE slides and supporting rollers.

The flangeway in advance of the point tips shall not be less than 41mm. It shall be consistent with the wheel/rail interface report.

The amount by which nominally 'closed' point tongues may be open at their tips whilst still providing detection, shall be agreed as a part of the wheel/rail interface criteria.

Each Point Machine shall be clearly identified and robustly labelled.

Point Machines of all types and their drive and detector rods shall be insulated from the running rails and from the surrounding earth. Separate earthing connections for the drive motor (where fitted) and the machine case shall be provided.

Point Machines of all types shall normally not require maintenance more frequently than at three-monthly intervals although inspection may be carried out more frequently.

All Point Mechanisms shall incorporate at least one volt-free change-over contact in both the 'Normal' and 'Reverse' positions, in addition to those required for detection purposes.

In the case of Point Machines incorporating an over-centre device, it shall not be possible for the machine to be set in the 'null' position during powered or sprung operation, as applicable.

26.10.2 Specific Requirements for Motorised Point Machines

The Point Machines will operate from a 230Vac supply.

The Point Machine shall be capable of operating the two point tongues for the full throw required to provide the standard 'blades open' gap, to clear the backs of the flanges of the wheels. However, the throw shall not be so great as to flex the tongues further than necessary, thereby introducing unnecessary stress in the track components and load on the operating machine mechanism. This dimension 50mm,+5/-0mm will be finalised after the wheelset profile has been determined and the Wheel-Rail Interface Report has been finalised in the Detailed Design Phase.

26.10.3 Specific Requirements for Sprung Point Mechanisms

The Spring Point Mechanism shall be capable of being biased to effect a route to either lie of the points. The mechanism shall normally set the points in their 'Normal' position but by adjustment, they shall be capable of being set in the 'Reverse' position.

In both cases, it shall be possible to change the lie of the points using the standard points operating bar with an effort not exceeding 230Nm.

Only the incursion of a foreign body in the space between the point tongue and the stock rail shall prevent a satisfactory change in the lie of the points.

The lie of the points shall be continuously maintained in the 'Normal' (or if adjusted, 'Reverse') position by adequate spring pressure.

After having been forced across by the passage of a tram, the mechanism shall positively return the points to the 'Normal' position and provide the standard 'blades open' gap, to clear the backs of the flanges of the wheels.

If possible, by the rearrangement of components, the Spring Point Mechanism shall be convertible into a Bistable Point Mechanism for the avoidance of spares duplication.

26.10.4 Specific Requirements for Bistable (flip-flop) Point Mechanisms

The Bistable Point Mechanism shall be capable of being biased to effect a trailing route through either lie of the points, by use of a standard points operating bar. The mechanism shall normally retain the points in the position last trailed. However, by operation using the approved points operating bar, they shall be capable of being set in the alternative position.

Only the incursion of a foreign body in the space between the point tongue and the stock rail shall prevent a satisfactory change in the lie of the points.

The lie of the points will be continuously maintained in the position last trailed by adequate spring pressure.

After having been forced across by the passage of a tram, the mechanism shall positively leave both blades of the points held firmly across with the 'closed' point against the stock rail and provide the required 'blades open' gap, to clear the backs of the flanges of the wheels on the other side.

The amount by which nominally 'closed' point tongues may be open at their tips shall be within the same tolerances specified for points operated by powered Point Machines.

If possible, by the rearrangement of components, the Bistable Point Mechanism shall be convertible into a Spring Point Mechanism for the avoidance of spares duplication.

26.10.5 Specific Requirements for Hand-Operated Point Mechanisms (Point Levers)

Points operated by Hand-Operated Point Mechanisms shall normally be traversed in the facing direction subject to a 10 km/h track speed limit.

One throw of the lever shall fully throw the points to either 'Normal or 'Reverse' positions. Levers which require one or more attempts to complete the operation are not acceptable.

It shall not be possible to inadvertently partially throw the points, which shall always throw sufficiently to allow the respective 'points thrown' indication at each lie of the points to be given with a single movement of the lever.

Only the incursion of a foreign body in the space between the point tongue and the stock rail shall prevent a satisfactory change in the lie of the points.

After having been thrown, the mechanism shall positively leave both blades of the points held firmly across with the 'closed' point against the stock rail and provide the required 'blades open' gap to clear the backs of the flanges of the wheels on the other side.

The amount, by which nominally 'closed' point tongues may be open at their tips, shall be within the same tolerances specified for points operated by powered Point Machines.

26.11 Technical Requirements for Point Control and Indication

26.11.1 Detection

Where detection and indication is required, the mechanism shall be fitted with detection equipment capable of differentiating between a 'safe' and 'unsafe' gap. When closed, the detectors must be capable of detecting a minimum gap of 1.5mm although the 'unsafe' gap detection including a safety margin will be slightly greater than this at 2.5mm, +0/-0.5mm between the closed point tongue and the corresponding stock rail at each lie of the points. To be confirmed with wheel/rail interface criteria.

Each point tongue shall be independently detected through a separate mechanical connection to the point tongues, independent of the drive rod connection and as close as practicable to the tip of the tongue. Totally enclosed proximity switches are preferred for this duty.

26.11.2 Control

The Point Controller shall receive information from the Tram Position and Detection System (TPDS) and set the Points and Point Indicators and shall be driven by the output from the point detection.

The Point Controller shall acknowledge the requests from TPDS and make all the necessary safety checks before commanding the point machine to move the points.

When the Point Controller causes the Point Machines to change the points, it shall monitor the detection contacts in the associated Point Machine(s) to determine whether the points have fully thrown.

Once the points have been satisfactorily operated (i.e. been fully thrown), the Point Indicator shall show a sloping row of lights (or LED clusters), corresponding to the lie of the point to approaching trams. If the points have not fully thrown, a horizontal row of lights (or LED clusters) shall be displayed.

If an appropriate command has been set by personnel in the Control Centre, the Point Controller shall block any associated points requested by the tram on-board computer from its route code.

The Point Controller shall report to the adjacent Tram Position and Detection System and or SCADA when any of the following conditions apply:

- Failure of the Point Machine supply;
- Failure of the Point Indicator supply;
- Receipt of an indication of faulty point detection; and
- Failure of the Point Heaters supply.

When the relevant track circuits or mass detectors detect the presence of a tram in a prescribed area, the Point Controller will lock the points against any further signals to change them until the tram has left the prescribed area.

The Point Controller shall also afford the facility to set and control the associated points locally.

26.11.3 Indication

The lie of the points shall be indicated to trams approaching the toe of the points in a facing direction. Indication of trailing points likely to be taken at high speed shall also be considered. The specific requirements at each location are defined on the track layout diagram.

The basic technology and design of the point indicator shall be same as the tram signals. The colour shall not be white, red or green.

Point indicators shall exhibit the following standard aspects to drivers:

- Points set to left hand route: diagonal row of lights sloping upwards towards the left;
- Points set to right hand route: diagonal row of lights sloping upwards towards the right; and
- Points not detected: horizontal bar

The indicator shall be placed for visibility to the tram driver in the same basis as tram signals.

The means of illumination shall be by LEDs.

A minimum of five clusters in each row shall be provided.

All Point Indicators shall be located in agreement with the Operator and shall be co-located where relevant with tramway signals.

Each Point Indicator shall be clearly identified and robustly labelled.

The aspect shall be clearly visible in all weather conditions.

The Point Indicators shall normally not require maintenance more frequently than at three-monthly intervals although inspection may be carried out more frequently.

26.11.4 Control Cabinet

Controls to set and control the associated points locally shall be provided in a cabinet. These shall be operable while the relevant points are in direct view of the person operating them.

The Point Controller cabinet shall contain the power supply for the operation of the associated points and to all associated Point Indicators.

The Point Controller cabinet shall contain and control with an input from the SCADA system, the power supply to the point heaters mounted on the associated points.

The Point Controller shall not require maintenance more frequently than at six-monthly intervals although inspection may be carried out more frequently.

26.12 Indication of Hand Operated Point Mechanisms (Point Levers)

The lie of the points shall be indicated to trams approaching the toe of the points in a facing direction.

Upon the operating lever being thrown, a simple mechanical device will detect that the closing point tongue has closed to within the permitted tolerances specified above.

Detection of the fully thrown condition shall cause a mechanical indicator to display a corresponding indication to the tram driver. The indicator shall present an indication equivalent to that shown on lit indicators and be visible from the normal tram driver's operating position in the cab, when the tram is 5 metres to the rear of the point tips, in daylight and illuminated by the tram's headlights after dark. Failure to close the tongue to within this tolerance shall not allow the indicator to show a 'points thrown' indication. Both point tongues shall be detected, either individually or as a coupled pair.

26.13 Technical Requirements for Points Heating

Points heating systems will allow the efficient operation of points in low temperatures and shall be such that the components will not intrude into the surrounding infrastructure.

Points heating shall be electrically powered and shall be controlled automatically by sensing when the predefined temperatures for activation and deactivation have been reached.

Point Heating devices shall provide health status information via the SCADA to the Control Centre.

Point Heaters shall be capable of being manually activated and/or deactivated locally and from the Control Centre.

The locations at which point heating shall be provided will be agreed and shown on the track layout diagram.

Where more than one heater is controlled from a Point Controller, it shall energise each of them in sequence in order to limit the inrush current demanded.

The Point Controller shall monitor the local ambient temperature and humidity and control the supply to the point heaters accordingly.

The settings at which the point heaters are energised shall be adjustable within the limits of 0°C to + 5°C.

26.14 Tolerances

The following definition of construction and maintenance tolerances shall be developed and agreed between Infraco and **tie**.

Element	Qualifier	Comment	Unit	Comment	Desirable Value	Limiting Value	Exceptional Limiting Value
Speed	Shared running	Maximum	kph		**50**	**50**	**50**
Speed	Segregated running	Maximum	kph		**80**	**80**	**80**
Speed	Depot	Maximum	kph		**15**	**15**	**20**

Table 62 - Speed assumptions and normal limitations

Element	Qualifier	Comment	Unit	Comment	Desirable Value	Limiting Value	Exceptional Limiting Value
Geometric element	Minimum length		m		**15**	**12**	**6**

Table 63 - Geometric Elements - Element lengths are tied to the tram length, specifically distance between bogies

Element	Qualifier	Comment	Unit	Comment	Desirable Value	Limiting Value	Exceptional Limiting Value
Horizontal radius - Minimum	Running lines	Slab track	m		50	30	25
Horizontal radius - Minimum	Depot lines		m		50	40	20
Horizontal radius curves	Distance between opposite flexure	Radii dependant - no transition curves	m	Considered minima dependant upon tram data	15	10	6

Element	Qualifier	Comment	Unit	Comment	Desirable Value	Limiting Value	Exceptional Limiting Value
Horizontal radius curves	Distance between opposite flexure	With transitions on adjacent opposite flexure curves	m	Exceptional to be considered individually (also refer wheelbase)	10	8	6
Horizontal radius curves	Distance between curves of opposite flexure	Turnouts - theoretical tangent points at switch toe to next tangent pt (of opposite flexure)	m	Considered minimums dependant upon tram data (wheelbase)	10	8	6
Horizontal radius curves	Distance between curves of opposite flexure	Turnouts - theoretical tan.pt. at switch toe to tan.pt. (of similar flexure)	m	Considered minimums dependant upon tram data (bogie axle ctrs)	5	3	2
Horizontal radius curves	Tramstops		m	Absolute minimums	Infinity	2000	1000

Table 64 - Horizontal Curves: Minimum requirements for horizontal curves including distances between similar and opposite flexure. Similar requirements also for horizontal curvature up to turnouts and through Tramstops.

Element	Qualifier	Comment	Unit	Comment	Desirable Value	Limiting Value	Exceptional Limiting Value
Cant	Platforms		mm		0	0	0
Cant	Tangent track	Facilitate drainage	mm		0	15	15
Cant	Fixed Obtuse crossings		mm		0	15	30
Cant	Curves		mm	Subject to Tram	75	75	100
Cant	Plain line track – depot		mm		0	0	15

Table 65 – Cant: Maximum cant values

Element	Qualifier	Comment	Unit	Comment	Desirable Value	Limiting Value	Exceptional Limiting Value
Negative cant	Plain line		mm		0	15	15
Negative cant	Turnouts	Turnouts - when turnout is facing downhill on a grade	mm		0	0	15
Negative cant	Turnouts	Turnouts and acute diamond crossings	mm		0	0	15
Negative cant	Turnouts	Obtuse crossings in diamonds	mm		0	0	0

Table 66 - Negative Cant: Maximum allowable values which are particularly important with regard to turnouts and obtuse crossings.

Element	Qualifier	Comment	Unit	Comment	Desirable Value	Limiting Value	Exceptional Limiting Value
Cant excess			mm	Subject to Tram	0	25	50

Table 67 - Cant Excess - Normally applied where slow speed running may be encountered, but does have some bearing in this concept.

Element	Qualifier	Comment	Unit	Comment	Desirable Value	Limiting Value	Exceptional Limiting Value
Cant deficiency	Plain line		mm	Maximum	40	60	75
Cant deficiency	Plain line - Depot		mm		40	75	100
Cant deficiency	Through route of turnout	On tangent or curved track	mm		0	40	60
Cant deficiency	Turnout route		mm		40	60	75
Cant deficiency	Based on theoretical radius at switch toe	Cant deficiency based on theoretical radius formed by shortest wheel-base placed centrally at switch toe	mm		40	40	50
Cant deficiency - jerk	At switch toes Consider shortest wheelbase	Maximum permitted jerk rate at switch toes using theoretical radius formed by shortest wheel-base	m/s3	jerk = 0.2 m/s3	0.3	0.4	0.5
Cant deficiency - jerk	Plain line Consider shortest wheelbase	Maximum permitted jerk rate as a result of the geometry change and shortest wheel-base	m/s3		0.25	0.35	0.45

Table 68 - Cant Deficiency: Deficiency at the switch toe will require careful consideration, effectively setting speed restrictions. Particular impact on the criteria will be to assess jerk with reference to the shortest wheelbase.

Element	Qualifier	Comment	Unit	Comment	Desirable Value	Limiting Value	Exceptional Limiting Value
Transition curves	Virtual Transition	Length basis	m	Subject to Tram	No use	1.8	1.8
Transition curves	Clothoid	Minimum length	m	Subject to Tram	15	10	6

Table 69 - Transition Curves - Dimensional requirements with some relationship to the tram dimensions

Element	Qualifier	Comment	Unit	Comment	Desirable Value	Limiting Value	Exceptional Limiting Value
Cant gradient	Cant gradient - Maximum permitted	RoCC may be overwritten by other minimums		Consider RoCC	RoCC	600	300
Cant gradient	Cant gradient - Minimum permitted				1500	2000	3000
Cant gradient	Switch toes				0	0	0
Cant gradient	Crossings and diamonds				0	0	0
