Tara one more.

Adien Survey Report

We refer to the recent events at the Casino Trial site, which identified anomalies within the Ground Penetrating Survey carried out by Adien, on SDS's behalf. As can be read from the report, attached, they have concluded that this was an isolated incident and not repeated elsewhere. Further to this, we have requested that additional surveys be carried out at specific locations identified by **tie**. Four areas have been chosen for secondary GPR surveys along the route of the TRAM, primarily areas where congesting of existing services is a major influence. Subsequent trial holes will be carried out at these locations to verify the accuracy of the surveys performed. The findings from this exercise will determine what further actions, if any, are required to confirm the veracity of the information provided and what is required moreover to achieve the necessary level of confidence for the remainder of the surveys. I would welcome any thoughts you have on this matter.

regards
