Importance: High

Gentlemen, for clarity and avoidance of any doubt, SDS have not issued out any residual hazard information to **tie**, in relation to section 1b (Leith Walk), which is required as a matter of extreme urgency. Can someone please come back to me with an update on when I should expect to receive this, so I can allow AMIS to take suitable measures in controlling the residual risks. Please also note that section 5A (commencing 20/8/07) information is also awaited.

Graeme

Tony,

Graeme continues to deal direct with the SDS HSQ guys but without a great deal of joy. He will continue though. Can you ensure though that during discussions with SDS regarding design deliverables that the residual hazard register/information is not forgotten about.
Thanks

Tom Condie

Tom,

I am overwhelmed down here and would be extremely grateful if Graeme could follow this up direct.

All the best,

Tony

Tony,

SDS have provided an advanced copy of the residual hazard register for section 1A to Graeme Walker. Graeme has reviewed it and held a meeting with SDS HSQ and Halcrow personnel and it still does not satisfy requirements. Graeme will give you the details. Graeme Barclay is has now received letters from AMIS requesting, amongst other items, the residual hazard register for sections 1B, 5A and 5B. The situation is now threatening the work starting as AMIS cannot inform their risk assessment or method statements without the information. Can you get an indication of when we will be provided with the registers. Graeme is available to speak with the relevant designers.
